The 2022-06-12TNebuchadnezzarDreamImageDaniel2v32-33.html will display the image dream of the king of Babylon, Nebuchadnezzar (Daniel 2:32-33).

The ABriefOfOurselfIsNeverEnoughOfOurEntireSelf.html will format and style a text in capital, Camel and Pascal notations.

The AccordingToManyIHaveSpoken.html will relate verses.

Accounting Income Statement, also known as the, Profit and Loss Statement

The ActToGod.html is a major and minor categorization of the Bible.

ADayToSubmitATimeToLookElsewhere.html language and keyword.

The AddressingThePart.html is a canvas drawing of king Nebuchadnezzar's image dream and prophet Daniel's interpretation (Daniel 2:32-33).

The AdewoleOmotoshoEbenezerAdeniji.html paternal grand father's family tree.

The AFitInTime.html ratio of difference between three dates.

AgedDate.html will return ages at a set query.

The AHistoryOfOurPassageATasteAtUs.html is for viewing and editing expeditions in the Bible. It offers navigation, such as, first, previous, next, and last; as well as, append, delete, and insert.

The AHomeIClaim.html will accept a first and second scripture reference verse, and compute the difference.

The AishaqAndTraining.html AlphabetSequence languages.

The AlaSQL.js_-_BibleBookTable.html is for Javascript SQL table query.

The AlaSQL.js_-_BibleBookArrayOfObjects.html is for Javascript array of object query.

The AlaSQL.js_-_OnlyRefuseSubstainTheLine.html is for client-side SQL, for scripture reference retrieval.

AllenGTaylor_-_SQLAll-In-OneForDummies_-_WhatWillIForm.html Master-details of tables and columns.

The AlphabetSequenceGroup.html is for AlphabetSequence, and specifying the Bible sections.

The AlwaysCountForYou.html will query the HisWord table based on the datepart, for example, year, quarter, month, and day.

The AmericaWorkingFour.html is for data definition language (DDL).

The AnAccurateMeasureOfThePresentIsHowFarIAdvanceIt.html is for reverse-engineering the items in the HisWord table. When you enter a number, it will list the words that have this AlphabetSequenceIndex.

The AndHeFeelsItIsGood.html is for contact statistics in the HisWord table.

The AndThenAtElevenOClockWeAreGoingToGiveYouPreparingOnPollution_ArmorProgrammingBeganInFranceFifteenYearsAgo.html Will determine the date between from and to, for a time of the day.

The AndThePriestSaidAreOneOnlyForMe.html Titles of God, Gematria, Mispar Hechrachi method.

AlfredAdeniji.html Where the scene is specified in consecutive entries?

The APerhapsCompare.html will search a scripture reference for a Bible word, and report on the frequency, and first and last occurrences.

The APrecedenceOfMenIsTheFollowing.html first occurrence.

The AppreciateTheRest.html will list the days, and their corresponding frequency of occurrence(s) in the Bible.

The Approach.html builds on Exact.html, the enhancement is that if offers a scription reference restriction, and it is the first implementation of Language Integrated Query (Linq).

The AProvenOfMan.html will list the entries in the HisWord table for a particular day.

The AProveOfWhereIAmExisting.html is for AlphabetSequence from various data sources.

The AQuestOnYourBehalf.html will list the various punctuation symbols, and their associated frequency of occurrence(s) in the Bible.

The AreYouASpiritualSon.html is almost a replica of Exact.aspx; the only difference is that the query requests a character substring map; but the schema and its display are exactly the same.

The ArrangingAtPresent.html will compare the timing of Date of Birth (DOB), and Date of Death (DOD).

The AsIMadeMan.html will list the specified Bible calendar.

The AssociatingAsALife.html will find word occurrences at a url.

The As so the Scripture says.html will tabulate the various books that make-up the Bible; it sources its information set from BibleBook.xml, and it uses XMLHttpRequest.

The AssociativeWords.html is word associative, finding the next or previous word. This is an example, and it is hoped that it will lead to greater exploration, of how words are relevant to one another; what provokes or precedes one word.

The AsStepsLearnFromGod.html is the Biblical family tree.

The AsWeSaidOmoSchoolYinNaTryOhunNaMakeEffort.html displays family relationships - father, mother, and siblings.

The ATrialOfOurEnd.html uses Ivan Bozhanov's jstree to display the Bible; in a tree format.

The ATrackOfMyHistoryIsItTheSameAsIAmAliveInYou.html will accept user input in textarea; and provide output chronologically.

The ATypeOfAccountancyOfMyAge.html will parse a URI, and determine the datetimes.

The Babylon.js.Shape.html will draw the various items in the Bible.

The BecauseWeAreHellThisIsOurDefinition.html given a date, weekday, and day of the month; find the previous and next date; for example, Friday the 13th.

The BeginAtLeastAndYouFindTheSufficiencyOfGod.html converts the time to the date span, from until.

The BibleBookDetails.html allows the user to enter a book ID, and it will return the book details.

The BibleBookGroup.html groups Bible books, and calculates the count of the chapters and verses.

The BibleBookIDTitleChapterVerse.html will list the books, chapters, verses, and sum.

The BibleBookLinq.js.html uses Linq.js to group Bible books titles.

The BibleBookQuery.html queries the Bible database, using the book ID, title, and Testament as criteria.

The BibleCommentary.html retrieves information from the various commentaries. The source of our information, include John Wesley's Bible Notes - Commentary of the Bible, Matthew Henry Commentary, and People's New Testament.

The BibleWithoutHands.html queries the what, when, where, who?

The command below, is for bulkcopy
BCP BibleDictionary..BibleDatabaseJohnWesleyBibleNotes in 2015-11-07T1429BibleDatabaseJohnWesleyBibleNotes.txt -T -c -m 1000

The BibleBooksReduceFilter.html counts the chapters and verses in the Bible Books, using the Javascript, client-side, reduce and filter commands.

The BibleDictionary.html retrieves information from the various dictionaries.

The BibleBookIDTitleChapterVerse.html will list the Bible books, and the count of chapters and verses, as well as provide a sum at the end.

The BibleInputRange.html gauges a place in the Bible.

The BibleJSON.html is for querying the Bible in JSON format using XPath.

BiblePercentage.html

BibleSection.html

The BibleStatistics.html uses SQL (Structured Query Language) to present statistics of the Bible.

The longest book in the Bible	Psalms
The longest chapter in the Bible	Psalms 119
The longest verse in the Bible	Esther 8:9
The shortest book in the Bible	2 John
The shortest chapter in the Bible	Psalms 117
The shortest verse in the Bible	John 11:35
Duplicate Verses - Count: 120	LetMeBeTheWay.html
Duplicate Verses - Sum: 389	LetMeBeTheWay.html

The BibleStatisticsActivity.html informs on activities in the Bible.

The BibleStatisticsExact.html informs on figures in the Bible..Exact table.

Bible Statistics Exact

Question	Answer
First word in dictionary ascending sort order	A
First word in record order	In
Last word in dictionary ascending sort order	Zuzims
Last word in record order	Proceeding
Least occurring word	Abaddon
Most occurring word	The
Unique words count	12891

The BibleStatisticsOpposite.html informs on opposites in the Bible.

The BibleStatisticsPunctuationMarks.html says the first and last question marks, colons, and aprostophes that appear in the Bible.

Punctuation Mark	First & Last Occurrence Verse(s)	Count
'	Genesis 3:20, Revelation 21:27	1791
:	Genesis 1:3, Revelation 22:18	11444
?	Genesis 3:1, Revelation 17:7	2539

The BibleStatisticsReviewingOfAll.html says the roles that are in the Bible.

The BibleStatisticsToEverySuccessionThatIsMyRatio.html says the ratios that occur in the Bible.

The BiblicalDaysCalculation.html calculates the sum of Biblical years, Biblical months, and days.

The BiblicalNumbers.html retrieves a sample of the various numbers in the Bible, and compute statistics.

The BibleBookInfo.html is the first implementation of the R Language in SQL Server.

The BibleWord.html is for finding the instances of words in the Bible. The types of search conditions supported are "or", "and", or "phrase". The search manifestation may be for whole word or partial. The search may also be restricted to either the Old or New Testament, or a group of books.

The BigInteger.html will work with the BigInteger.

The BillGates_-_MelindaFrench_Personal.html will restrict the dataset between a range.

The BillInDate.html will display Unified Modeling Language (UML) information for particular parts of the Bible, given the scripture reference.

The BobJossData-Attribute.html will accept a URI and list its data attributes.

The BodyParts.html will do statistics on body parts.

The BookAuthor.html will list the authors of the Bible books.

The BringWaterDown.html will list the Bible verses according to the chapter or verse, top or bottom conditions.

The BuildingAHouseThatEnlarges.html will display rectangles that increases in size using canvas.

The CanYouMakeMyLifeAsACertaincyOfYou.html will suggest Bible verses; it reads Word.csv.

The Carlos.html is an experiment with the Soundex implementation of Microsoft SQL Server.

Both census of Numbers 1, 26 are tallied. The Census.html is a prove-of-concept of the Over clause implementation of Microsoft SQL Server. jstat offers analysis of each census, and the combined total. The Chart is from ChartJS.

CensusPopulationPivot.html the sum of each tribe, for census 1 and 2.

CensusRollupCubeManOWar.html This is bringing the world of Online Analytical Processing (OLAP) to our research. Bible is a static database; and new records are added to WordEngineering, daily. The census offers the opportunity to compare the count at both times when the men of war were counted, we are interested in seeing growth or dip, and determining the total number of warriors. This is similar to the seal at Revelation, but the count, seal, is always 12,000 for each tribe, and total sealed is 144,000 (Revelation 7:1-8). Also the total is not tallied, previously (Numbers 1, 26). Fully ahead, is the substancy, of the view.

The CensusRunningAggregation.html is for row-level aggregation.

The ChangesOfMileInTheMiddleEast.html evaluate expression, for example, first and second census.

The ChooseYourProphecyAndItIsYourDecision.html will allow the user to enter a date, specify either the Biblical or Gregorian calendar, and state date parts.

The ChoosingALifeAfterIsSeemingAPeriodHome.html is for searching based on scripture reference.

The ChurchCalendar.html commences from Advent Sunday, and it includes Christmas, Epiphany, Ash Wednesday, Lent, Easter Sunday; and it concludes at Pentecost. Pastor Lucy Kolin of the Resurrection Lutheran Church, lectured on the church calendar at a meeting held on 2003-12-10. The reason for identifying the source is to offer acknowledgement, and understate that there may be discrepancies with other church denominations.

The ClaireBentley.html contact initials, for example, BC.

ColumnSet.html An insert statement, restrict the input to just these columns; in manipulation statements, only these columns, are affected; for example update and delete, will only alter, affect these columns. When SQL Server generates schema scripts, it also generates computed columns values; these entries are not insert-able.

ContainShip.html Roles and time in office.

The CouldYouStoreAndRunCodeFromTheDatabase.html sets the srcdoc of the IFrame.

The Countrycode.org.html sources its information from country.org.

The CrossEuropeUnfinish.html draws on a canvas.

The Daniel70Weeks_-_html5-microdata.html will offer information on prophet Daniel's 70 weeks prophecy, and its fulfillment, according to “The Coming Prince”

The DataManipulationLanguageDML-DocumentObjectModelDOM.html is for the data manipulation language (DML).

The DateAdd.aspx adds days to a specified date; when the days to add, is a positive value, then it is a forward date.

The DateAdd.html increments or decrements days by a given value. It differs from DateAdd.aspx, in that it accepts Biblical metrics, like Biblical months and years.

The DateCompute.aspx calculates the date adjusted by the year, month, week, and days.

The DateDifference.html calculates the span between the start and end dates.

The Dater.html calculates the date of birth and death in the Bible.

The DateReverse.html is for the difference between the month and day, interchange.

The DateRatio.html calculates the date span between the start and end dates, with a ratio.

The DatesComputation.html will add date units.

The DecemberTenThirtyOne.html will accept a date, and it will determine a corresponding scripture reference.

The DeEd.html calculates the scripture reference for a percentage.

Design Patterns.

The DidTheDutchWon.html will compare two scripture references and it will display the words that differ.

The DifferencingFromMyNeed.html is for permutation, using word combination coding provided by Eric Lippert, a Microsoft veteran.

The DirectoryListing.html is for listing files that are in a specified directory.

The DiscoverPowerShell.html will explain the beginning chapters of the Bible using PowerShell.

The DontFeelLeftAlone.html will query the database to find the date differences for contacts.

The DoWeChooseToBeKnownAsWho.html will use a similar search like Exact to find consecutive Bible verse words.

DoYouShelterFromAbove.html is for word count.

The DueToDepart.html is for displaying the tables contents, in various formats; it prevents against SQL injection.

The EqualAsPeople.html is for displaying the father of a set of people.

EqualSide.html The numbers, and there occurrences in the Bible. The information is stored in the NumberSign table.

The EsvApi.org.aspx is a web service requestor that extracts information from the ESV (English Standard Version) Bible, and makes it available in a stylistic fashion.

The EveningMorning.html will list the scripture reference and verse text for the words in the order of occurrences.

The Eventuate.html will list the count of occurrences of ContactIDs in our primary tables.

The EverSinceLifeKnowsYouIPretendToBeTheSame.html lists the census, and there running total. The people were tasked, there was no mention of ammunition? The benefit of tasking God; is seeing Him alive, in you.

The EveryMajorWriterIsATalker.html finds the longest word(s) in particular verse(s).

The ExplainPaulsGospel.html obtains scriptural text of Bible citations, just as ScriptureReference.html. It extends, this further, by listing, the headings associated with the text. These headings and their corresponding citations are exhibited by ExplainSacredText.html.

The ExistsIn.html.

The ExternalReferenceForAURIParsingTheDOM.html external reference for a URI, parsing the DOM.

The FatherSide.html will find the count of words and letters on either sides of the word.

The FillTheDayWithWhatIsNew.html will retrieve the text in a node.

The FindTheWordThatMakesThePercentageOfTheWord.html finds the partial words that make-up a certain percentage of the whole words.

The FirstAtLast.html finds the first and last words in verses.

The FittableDeliverable.html queries the Remember table using soundex.

The FiveOne.html will find word arrangements using CHARINDEX a keyword like indexof.

The FivePointFourEightOnePointFourEight.html will associate the words in the Bible by using soundex.

The FromFiveToSixAMonthAgo.html checks the Roman representation of letters.

The Full-TextSearch.html uses Full-Text search to query the Bible.

The Full-TextSearchHisWord.html uses Full-Text search to query the HisWord table.

fullcalendar.io.html

The FullPosition.html determines the next and previous scripture reference.

The Gatherance.html will query documents by using filters.

The GetAPage.html is a conglomerate of information, such as the AlphabetSequence, SacredText, and BibleWord. Showing example.

The GenealogyGeneration.html of Adam.

The GermanIsDetermineToAriseToTheGristlyFifteenYearsAgo.html scripture reference and a percentage.

The GetSchema.html database schema.

The GoAndUseTheMacYouNeedToRecognizeThat.html will determine the ratios of the times.

The GregHoffman_-_Nike_-_ToAcceptWhenThereAreNoOther.html will list counts of Bible words, including actors and places.

The GroupOfPeople.html will list a group of people and their request(s).

The HadBeenWrittenToTheChurches.html will list non-unique verses.

The HalfIncluded.html will use wildcard; front of word, left; search back, right.

The HeActedHisWillOut.html will find the statistics of the words in a scripture reference.

The HeFinallyShowedItToMe.html uses the HTML Agility Pack to query documents.

The HeIsHalfGone.html will generate header source codes, templates, skeletons, in programming languages.

The source of the reasoning below is A Practical Introduction to Data Structures and Algorithm Analysis by Clifford A. Shaffer Professor 2000A Torgerson Department of Computer Science Virginia Tech Blacksburg, VA 24061 (540) 231-4354 shaffer@vt.edu. Baptizers include {John the Baptist, disciples, Philip, Paul} (Matthew 3:14, John 3:23, Acts 9:18, Acts 16:14-15, Acts 18:8, 1 Corinthians 1:14, 1 Corinthians 1:16). Baptizeds include {Jesus Christ, Ethopian eunuch, Paul, Cornelius, Lydia, Crispus, Gaius, Stephanas} (Matthew 3:13-16, Mark 1:9, Luke 3:21, Acts 9:18, Acts 10:48, Acts 16:14-15, Acts 18:8, 1 Corinthians 1:14, 1 Corinthians 1:16). Jesus Christ is a member of the baptized set, ∈ but in one case, it is explicitly stated that Jesus Christ, Himself, did not baptize, ∉, as Jesus Christ disciples, did the baptisms (John 4:2). Jesus Christ is the only begotten Son of God (Psalms 2:7, John 1:18, John 3:16, John 3:18, Acts 13:33, Hebrews 1:5, Hebrews 5:5, 1 John 4:9); therefore, Jesus Christ is equal, =, to God (John 5:18). A permutation of man's sequence is God, Jesus Christ, and then the human race (1 Corinthians 15:23-29). The baptizer is probably spiritually more mature, greater than, >, the baptized (Matthew 3:14). Paul was baptized, and he subsequently baptized, the only person mentioned as belonging to both sets; therefore, Paul is a member of the intersection, ∩, of the baptizer and baptized sets (Acts 9:18, Acts 16:14-15, Acts 18:8, 1 Corinthians 1:14, 1 Corinthians 1:16).

The table below is an extraction from the List of XML and HTML character entity references

Name	Character	Unicode	Description
cap	∩	2229	Intersection
ni	∋	220B	contains as member
notin	∉	2209	not an element of
isin	∈	2208	element of

The HeTookSomeWords.html is for extracting words from a URI and converting to past tense, plural and present participle.

The HisWord.Aspx is for making inquiries about the information stored in the HisWord table.

The HobiGoUp.html will calculate the AlphabetSequence, after the user enters, each key; and it will display the scripture reference, for where the number occurs in the Bible.

The HoweverOurProgressArePersonal.html is for querying activities in the Bible.

The HoweverWeAreThatIsWhereWeAre.html is for name changes, for example, from Abram to Abraham, from Sarai to Sarah.

HowLifeBoundsMe.html SacredText table search.

The HowYouMakeUseOfHisOwn.html is for querying numbers that appear together.

The HowWeWouldLearnToSay.html is for listing the volumes and areas defined in the Bible.

The HTMLTableToCSV.html will export a HTML table to a CSV file.

The IAmAfraidOfTheMark.html will allow the user to specify the scripture reference.

The IAmNotForgotten.html is for tables and views schema.

The IAmNotSharingYouAsAPeopleIAmSharingAManAsMyPeople.html will determine the numbers that sum up, to the number entered by the user; and calculate the AlphabetSequence.

The IAmTotallyInterestedInAForeignKey.html will list a sample of the objects in the Bible. Object for software research.

The IDontThinkICanGetInNba.html sort scripture reference, alphabetically.

The IfIPassIWillGetThereAtOneOClock.html will use inheritance to calculate the verse ratio in a book group, for example 2 Corinthians 11:2, from Pauline Epistles.

The IfYouAccumulateYourselfWhereAreYouDepreciated.html retrieves the first unique anchors in a html document.

The IHaveKnowItForTwentySix.html parses URI searching for words in parentheses, assuming they are scripture references.

The IHaveNeverFurtherHitFourCInTheLoad.html will convert into word.

IHaveTriedAsGodThatIMaySeemAsMen.html Bible partition word count.

IKeepOnFindingWhereIAmThatIMayChooseWhereIBelong.html Linq with Scripture Reference.

The InThisIObtainMyUse.html will evaluate and sort a JSON array.

The IKnowAsDoing.html is for soundex.

The InDefine.html is a question and answer module, that offers a word game to the user.

The InformedGuests.html will determine the difference between two scripture references.

The InSeldomWeekInComputerTermsWhatIsItCalled.aspx retrieves information from the various dictionaries. The source of our information, include Bible Database, Easton's Bible Dictionary, Hitchcock's New and Complete Analysis of the Holy Bible, Nave's Topical Bible, R. A. Torrey's The New Topical Textbook, and Strong's Exhaustive Concordance of the Bible.

The InSomeonesLifeILived.LettingHimGive.TheReachingOfSomeone.html offers the word of the day, there are no query parameters.

The InSuch.html is an attempt to find out, if AlphabetSequence applies to other groupings in the Bible.

The IntegratedLicense.aspx is for inspecting the author's experience, dream, and remembrance.

The InTheUpside.html will limit its result set to the count of words in a verse.

The InTimeAnswerPast.html is for questions and answers with scripture references.

The InYourKindnessYouHaveNotExcludedMe.html will list from and until dates, in timespan of the Bible.

The IRealizeMyFullSenseInMakingMan.html will list scripture references where a person, body part, or activities are mentioned.

The INFORMATION_SCHEMA.

The IsMakingRemainderOfTime.html will parse a URI and determine the most occurring and longest words. Andrew Troelsen and Philip Japikse provided the initial C# sample source file listing.

The IsNecessaryTheSame.html Enter a number, find sequence words, letters.

The IsThisGenerationTheSame.html will extract the word and date by using their regular expression patterns.

The ItIsMeWhenItSeemAtAll.html will list timespan.

The ItIsNotHowMuchYouGiveItIsWhoYouGiveOhLORD.html is word arrangement count statistics.

The IThinkInAfricaWaterDry.html Duplicate verse text, having more than one occurrences.

IWantToBringAllTheFamiliesTogether.html words count.

The ItWasTwoThirtyThreeZeroThreeZeroEight.html time.

The IValueMostWhereIAmPurposelyUse.html will list the count of verses that make-up the Bible.

The IWantATenThousandDayIWillConceive.html will search the software files for word occurrences and probability.

The IWasThereForAMinuteNevada.html will list some of the titles in the Bible, such as, king, queen, priest, priestess, prophet.

The IWillBringAsMuchAsMyself.html will search for occurrences of scripture reference.

The IWillFeelAWinningAge.html will use regular expression to match all the dates at a url, and determine the timespan between a given date.

The IWillLliftItUpIDontTearItByName.html.

The IWillNotDivideMySize.html will calculate units of measurements.

The IWillTakeThemUpForTakingMyDelay.html will sort scripture reference(s).

The IwoAtiTutu.html will list the elements statistics of the DOM.

The IwoKanSebe.html will list sample data.

The IWontBringWhereIAmToSeeWhereIAmYours.html will list the scripture reference with there positions in the whole Bible, Testament, and Book.

The JavaScript Object Notation (JSON) - Data Definition Language (DDL).html will parse a JSON url, and will determine the data's names and types.

The JeshuaBrothers.html will list the stored procedures, and their output.

The JesusToSacrificeEverythingToSacrificeAll.html will list the verse(s) including parenthesis.

JohnJohnToFourteen.html will count the occurrences in scripture reference.

The JonSuh.com_-_JavaScriptTemplatingBibleBook.html will list and format Bible books by using JavaScript templating.

July1951NineteenFiftyOne.html Using Linq; for condition and sorting.

The JumpOverTheThirteenth.html will decide the scripture reference using a ratio.

The JRSinclair.com_-_WhatSearchesAfterItselfWillNeverBeAppended.html will filter, map, reduce.

The JSZip.html file compression.

The JustThirtyOneDaysDivided.html for a given selector, computes the occurrences, join IDs.

The Kitan.html will display the corresponding book, chapter, and verse; for a user entered number.

The KnowingMeAsAPersonIsSeeingYouAsAPeople.html will list the first and last letters.

The KnowingTheObvious.html will list a sample of the use cases in the Bible.

The labs.bible.orgNETBibleWebService.html is for seeing Bible citations from Bible.org NET Bible Web Service (API). For example, votd (Verse of the Day), random, John 1.

The LastAfter.html will list the letters occurrences, in the first and last positions, in the Bible.

The LaurenLangbert_-_LLangbert@quickbase.com_-_OurConnectionWithPeopleAreOurPastime.html will list the time.

The LearnWithJason.dev_-_FormDataAPI.html will construct key/value pairs of form entries.

The Lent.html adds the date parts, and calculates the AlphabetSequence.

The LetMeBeTheWay.html will list duplicates in the Bible.

The LetPeterGo.html takes the most popular phrases in the Bible, and replace the words with the name of the actors.

The LetsBringThisToTheConstitutionMovement.html is for regular expression experimentation.

The LeviticusAirDrop.html will allow the user to specify the BookIDs.

The LifesNormancy.html will accept initial or abbreviation, and determine the scripture reference. For example, NCY 2 Chronicles 3, 2 Thessalonians 1

The ListCount.html will count generations.

The LivedBeyondTheWilderness.html is for querying based on the Book ID, Chapter ID, Verse ID.

The LivesOnWord.html will create or alter a URI, and solicit response.

LookingAtMeAsAReflectionOfYou.html 2024-01-19T09:14:00 Is for querying exact occurrences based on word entered.

LovingLiving.html Knowing to be kind; I realize my view.

MakeMeKnow.html uses count and length of words for retrieval.

MakingMentionAtAges.html Add to days span.

MakingTodayAMemoryOfTomorrow.html The words that have the same first letters, initialism, are returned.

The MeISupposeInTime.html takes a number, and find words with the same length.

The MakingITrueIsLeftToNoOneEspeciallyUpToMe.html will list the various methods of communications that are mentioned in the Bible.

The MapTime.html will draw the analog clock, and list the various times, recorded in the Bible.

The MeetMyEndThrough.aspx will parse through the Bible, and determine the numbers, and scriptural occurrence(s).

The MentioningThings.html will parse a scripture reference result set and for each word display scripture reference first and last occurrences and the count of occurrences. It is like exact.html but it allows the user to restrict the scripture reference and row at which the word occurs.

The MightyMenOfDavid2Samuel23.html will sample king David's mighty men, as listed in 2 Samuel 23.

The MiraculousPower.html will trace the various stages of our lives.

The MissingItSimpleHeDid.html will allow the user to enter Bible citations, and enter the words that appear, in these Bible citations.

The MondayFifteenthNineteenSeventyThree.html find the months when the dates occurs on the day of the week.

The MondaySeventeenth.html find the occurrences of the week day, and the day of the month.

The MoFeMaLoleMoNiyawoLe.html will allow the user to enter a scripture reference, and it will output the distinct count of books, chapters, and verses.

The MoKanNiOFileNaNi.html will list the HisWord entries for holidays.

The MostlyAbsentFact.html will do a where conditional like query on the scripture reference.

The MyCondemn.html will accept a Book ID, and verse ID; and it will calculate the distance apart. G-d.

The NaturalOccurringSequence.html will report when the alphabet sequence identifiers are the same, in order.

The NeedingWhereIAm.html will list the related verses in the Bible.

The NorthCarolinaWantToHaveOurOwnNavy_CarolWasVotingForChiefLeye.html will group by either ContactID, Dated, or URI.

The NotHappyWithAPlaceClassX.html will query on the Bible word, number, logic and version.

The NotOnlyMeIWillBeAsSome.html will allow the user to enter Bible citations, and it will show the words that appear in these citations, and there frequency of occurrence.

The NothingBeyondMeIsAcceptableToMe.html will accept a Bible version, and provide the most occurring and longest word(s).

The NoticingTheSame.html will record the events in the Bible, along with the actors involved, scripture reference, and the places of occurrences.

The OneSixThreeButYouCantTellThat.html will allow the user to enter a book, chapter, and verse.

The OccurrenceOfTheMotion.html allows the user to enter words; select the combination - or, and, phrase; and it will find the occurrences in the Bible,

and afterwards determine the correlation between these words and the alphabet sequence of these positions in the HisWord table.

The OftenTimeIsTheGuise.html allows the user to enter a date, and use dates in the Bible as offsets.

The OjoToOhunBaPariPeluWon.html will rank Bible books, according to their number of chapters.

The OlohunModupeFunEyanToFunMiLeni.html is similar to Exact.html but it offers the opportunity to restrict by scripture reference and phrase. It will only list information for ranks and numerals.

OneOfTomorrow.html Apoclyptic statistics probability.

OneForTheForbiddenBoy.html sample statistics in the Bible; based on the numbers, in the Bible.

OneMustAddToTheSourceOfGovernment.html is like a more recent form of Exact.

OneOfTheFamousWebsiteIKnowThrewUsByComfortAsYouGoTo.html is a query for the Remember table.

OurFixationOnNumber.html A set of letters that must exists in the word(s) found.

OurPeople.html find the word that have the matching alphabets.

OurTogetherMayNeverLast,ButOurJoinAreForever.html jsonresume.org Takes a standard format; and makes reason out of it? With the specified work experience, predict the organizations that have openings in similar roles; which recruiters specialize in filling these positions? With the level of education, which learning institutions offer advancement programme(s). Where is the skill set useful, or obliterated? Our initial work uses the behindthename.com to find the name meaning and origin.

OurTypeAtTheEnd.html When I seem to have ended; that is when I regained my value.

PaulWhoCouldTalkAboutYouIndividualProsperity.html will display contact related information.

ParseAFileAndGenerateTheHyperlink.html

People will identify the people and their progenitors.

PeopleLivingAlike.html Find all the same values in a column? Uses the Exact table.

The PlacesInTheBible.html will list the places, and there references in the Bible; the source for the link of places is List of biblical places.

The Placeth.html will list the events in the Bible, and offer the user, the opportunity to say the place.

The PhrasesInTheBible.aspx will list the phrases, and there representation in the Bible.

The PhraseTwoOrMoreWordsThatReOccur.html will find the phrases in the Bible; two or more words that appear in more than one place.

plot.ly Census

The PrecedeMyTalking.html will list Bible books by groups.

The PreparedForTime.html will extract nodes without children and form AlphabetSequence hyperlinks.

The PressureByYourTeamMetAtY.html will list similar verses, Soundex, in versions of the Bible.

The Programmative.html will accept a scripture reference, and return the set of scripture references that it has reverse-engineered using the alphabet sequence; these is a corresponding set.

ProperNames.html comparing words with Biblical soundex. For the first time, the author was able to use the JavaScript's set function for distinct words, and also the ASP.Net's C# function accepts the WebMethod()'s List string parameter. Is it self compartmentalized? The chose to place business logic in the .html and .asmx files and not in the database. Although JavaScript offers Soundex, the database contains the Biblical words. The database also supports set-based logic, but there are inconsistencies in database programming; therefore, the need to succumb to row-based affordability cost.

PropertiesOnTheWeb.html is a way of obtaining user maintenance of the web.

PublishingTheFactNotAlludingToTruth.html compares the date the user enters with the dates in history.

ReferringToHimAsMyWork.html will search words by alphabet(s).

The RelatedVerses.aspx will determine the correlation between the words, between the various verse text.

The RepeatedWords.html will find the words that are repeated in the Bible verses, beside each other.

The RokoCBuljan_-_Croatia_-_WordCount(wc).html wc (Unix)

The ScriptureReference.html as the name indicates, is for displaying Bible citations. If no Bible citation is specified, then the complete Bible is displayed. Use the colon letter to separate the chapter from the verse, and use the Hyphen-minus symbol, as the range delimiter. To enter more than one Bible citations, separate each subset with a comma or semi-colon. For the computer to choose, enter, qotd, or random. The title of a sub-text may also be

entered, for example, Holy of Holies, Shema, Akedah. I have taken, a leaf, from htmlbible.com, for my formatting. The display, is a show, of what I learnt from htmlbible.com.

ScriptureReferenceComparance.html

ScriptureReferenceSort.html

The Sefaria.org_-_TextsAPI.html

The SeOKa.html will do statistics - count, minimum, maximum.

The SeOLeBereAddressBukolaOrBuki.aspx will retrieve information from the HisWord and associated tables.

The SeOLeLoLinqWithRegEx.html will use a dynamic Linq where clause to query the HisWord table.

The SeparateTheirDesireOfTheBible.html will search for a clause, within a scripture reference.

The ServingWho.html will search for a clause, within a scripture reference; group by book or chapter.
