# WordEngineering

Ken Adeniji

A thesis submitted for the degree of Doctor of Philosophy in the

## Abstract

**Thesis Statement:** This dissertation introduces [AlphabetSequence](#), a pure function to sum alphabet places [AlphabetSequence.cs](#). The offsets from the beginning and the ending of the Scripture. The of four parts; there are two references each to particular chapter verse, which the author calculates by determining the Alphabet mention is the forward chapter, and this the author calculates a chapter. Both the backward chapter and backward verse are the

The author is working on variations of AlphabetSequence: The exposition of God's word.

The incentives to begin work on WordEngineering will include:

1. Taking example from the Bible ([Daniel 9:2](#), [Genesis 18:19](#))
2. Creating an address book. To relate; who I use ( [Genesis 12:1](#) )  
[Where does He need one person? Many \( 2 Samuel 11-12](#)
3. Keeping a diary.
4. Expounding on His spoken word(s).

## Theory

"

### Data

" (Vaibhav Verdhan)

#### Structured And Unstructured

Structured data is alphanumeric put in row-column. Unstructured research is solely structured data.

#### Standard

The author imports complete, not NULL nor empty data, such as

The author achieves data validity by constraining and restricting Performance Indicators (KPIs) are not vital.

The author references and is not tampering with authoritative information accuracy, consistency, integrity.

Timeliness is effectual in the single user data entry table, HisW

## Unified Modeling Language (UML)

### Class

The information which the author documents in this section of WordEngineering and Data Dictionary, which is available at [GitHub.com SQLServer](#). Manipulation Language (DML) is too large to fit into the GitHub repository. The people that have access to the database, this private information

Contact is a primary entity, and it identifies the people and organizations. These affiliations are family, friends, or business links. Also record telephone numbers. The author stores the various exchanges via email notification of the subject's birthday and relative age. To keep information, the author is not sharing this highly confidential data.

The relationship between a contact and its related information

- [Background](#)
- [Prophecy and Fulfillment](#)

## Client Browser Source Files

- [HTML5](#) (.html)
- [JavaScript](#) (.js)
- [Cascading Style Sheets](#) (.css)

The .HTML files will work in all browsers; that support AJAX. Most JavaScript to work, mainly because they use Ajax to interact with the server, and may have a corresponding back-end associate, web services. The .HTML files contain re-usable code that are not .HTML files specific. The .HTML files, however, the author now places styling information, in a single file, the .CSS files, and it helps to achieve a common user interface.

"

## Cascading Style Sheets (CSS)

- Base Rules: A base rule is an element and not a class nor id. The author issues element selectors for the html, body, table, etc.
- Layout Rules: There are no layout rules, such as header and footer.
- Module Rules: The table of content (TOC) is for page navigation.
- State Rules: A state rule is for toggling, such as using JavaScript.

" (Jonathan Snook).

## Web Services

" We have standardized on the first .NET web services architecture. In these cases, there is a one-to-one mapping between the .HTML, .ASMX, and .Scripture. For simplicity and clearance of use, the .HTML files, in the case, with the GetAPage.html file, which is the workhouse, GetAPage.html, sends AJAX requests to multiple .ASMX files and previously isolated .HTML files. All the web services files support jQuery accepts the POST, HTTP verb. The author stringified the message. Errors are unforeseen, in the rare case, the authentication message. Security is lacking; this is permissible, since the Bible database can be read-only.

The Web Service Description Language (WSDL) is available, for [AlphabetSequenceWebService.asmx?WSDL](#). To generate a proxy file, run the following command: `language:CS /namespace:InformationInTransit.ProcessLibrary /out:"AlphabetSequenceWebServiceProxy.cs" http://localhost/AlphabetSequenceWebService.asmx?WSDL`. The Web Services generate the companion files; AlphabetSequenceWebService.dll and results.discomap.

The web.config is generally consistent across deployment, the application and database server exists on the same machine (local);Initial Catalog=master;Integrated Security=SSPI. This is the database, object owner, and system object name. The Application environment variables, in use, at this time. The HTML files, which are in the directory path, but when appending css and JavaScript files, the filename is unnecessary and an overkill.

The author standardized on Microsoft SQL Server as the relation in the market. All database interaction goes through one access point, re-work if there is a database variety change.

When running a unit of code, for the first time, it will initialize the application with a unique quote-of-the-day, every day; and a random quote version of jQuery, which is the most up-to-date. The web service will revisit. The code in the third-party libraries, such as, Newtonsoft.Json, will be deployed.

The application is mostly stateless except for the database read/write. The Internet Information Server (IIS) HyperText Transfer Protocol (HTTP) is used for servers, but this is modifiable.

Using the current architecture, the author takes care of concurrent access and are short, reads are tolerant.

The threads are simple and conclusive; therefore, there are simple threads.

There is unity between the development and production team, the developer can write, deploy, and run code.

The author has experience, reporting web server logs, using Windows Event Viewer logging and monitoring exceptions. The SQL Server Management Studio database activities.

The SQL Server Maintenance Plan is for scheduling full database backups.

" To reduce database load, the author considers the selection of the operation - specify the column list, and not use the universal \* to minimize the work and resultset, in a set-level language. " (C)

## HTML5

### Semantic Elements

The author makes heavy use of the table semantic element for input element and specifies either the text, number or date type elements for proof-of-concept.

When I stated AlphabetSequence, I ate my daily meal at 6PM, day, into punctual scheduled activities, such-as:

- Wake-up
- Brush my teeth and shower
- Breakfast
- Work
- Lunch
- Dinner
- Bedtime

This is how most people, live their lives; this is what I have accomplished, to record the word and personalize my entries. I try to record forthcoming event threads.

- Is this how life is punctual ([Genesis 37:9, Genesis 41:32,](#)
- What do we note as behavior ([Romans 6:1](#))?
- You start, forming your own example.

When the author observes explicit experiences, he may record ContactID, ScriptureReference, Location and Scene columns. The Remember and APass tables.

However, he is present, that is how I use.

- If I have a paper and pencil available, I write down the word
- When I have access to the database, I enter and store the word
- Internet connection means the resultset is retrievable via
- Text editor is useful for writing SQL.

Divided as separated. Go this way, that way.

I want to program, but I don't want to match two programs to

See when God grants increase; such as in creation, when God morning. Increase versus decrease were first explicitly mention can associate with signs - the sun and the moon. During the day evening, it is not necessary. Rachel's prayer, and naming of Joseph counting is explicit, before Exodus, such as, the 10 plagues of Egypt ( [Exodus 10:1-13](#) ).

[TCP/IP](#) is separable into four layers; these are the link, Internet, Transport, and Application ( [Matthew 19:8](#) ).

## Marriage

Marriage is not a practice, in the life after, resurrection ( [Matthew 22:1-14](#) ). The disciple, who Jesus loved, John the apostle, does not mention resurrection, after three days ( [Matthew 12:40](#), [Matthew 26:61-66](#), [Mark 15:29](#), [Luke 2:46](#), [John 2:19](#), [John 2:20](#), [2 Corinthians 12:12](#), [Revelation 22:17](#) ). The breaking of device ( [Psalms 34:20](#), [John 19:34](#) ).

On the client, HTML is content, CSS is presentation, and JavaScript is side logic.

The application tier is in a dynamic link library (DLL), and it is separate but with the advent of language integrated query (Linq), this division of labor.

The database consists of tables, views, indexes, constraints, and stored logic may be SQL or SQLCLR. SQL critics complain that while it still use an archaic language; NoSQL is a challenger.

## Visibility ( [John 4](#) )

The client is accessible from the browser, both the user interface and exceptions. The interface is made-up of request and response. The client handles the human computer interface (HCI), such as options in HTML or JavaScript.

The database contains the real information, that makes-up the

## Lifecycle ( [John 3:3](#), [John 3:7](#) )

In computing, we have had mainframes and terminals, client/server been from proprietary to open architecture.

## Accompany ( [Matthew 4:6](#), [Matthew 18:10](#) )

## One Chance; Seem The Rest.

Our LORD's prayer is a communal prayer; directed to the one C that it is Jesus; teaching this prayer; so He doesn't refer to Him passage, when He mentions Himself as the bread ( [John 6:31](#) ); it, by explicitly referring to the Father. He is alluding to the eve We are on earth, and we have an earthly father; where we are, [6:9](#), [Luke 11:2](#), [Daniel 2](#), [Revelation 5](#) ). When no matter, whe

## To Set Everything True

The word, [true](#), occurs in seventy-seven verses in the Scripture first occurs in Joseph's interaction with his brothers ( [Genesis 42:34](#) ); Jacob had colluded with Rebecca, his mother, Joseph will have elevation over his parents and siblings. There ( [Revelation](#) ); in response, to God.

## To Whom Masculine?

How the Bible compares the gender?

### Man, After His Fall

During Creation, God asked all living things, be fruitful and mu and God required Adam to take care of the Garden of Eden, bu there is a role for man, the tree of the knowledge of good and welfare of animals. Out of Adam, God made a helper for man, I

After the Fall of Man, Adam's labor will be thorough; and there other's seed; and Eve will have pain, during child-birth.

God made coats of skins, and clothed them; it is our presumpt perceived as sin sacrificial animal(s), but since this clothing is r another creature entirely.

God created an adult male, Adam; and his female counterpart, mention of Adam's activity, after the fall of man; as Eve bares was to cater for the Garden of Eden and name the animals.

### Man At Birth

We can only suggest, that the struggle between good and evil, named Cain, as her possession; and Seth, as the appointed sex

God instituted male circumcision, which should take place on th Abrahamic covenant.

[ScriptureReference.sql](#) [ScriptureReference.sqlplan](#) [ScriptureRef](#)

The SQL script contains four scripture references; therefore, the execution plans, Query 1, 3 and 4, will solely make use of the I/PK\_Scripture. These three have trivial optimization levels.

Query 2 does an Index Seek on the IDX\_Scripture\_VerseIDSequence covering index, since the Select column-list includes the BookID referenced as well in a Key Lookup. Both the Index Seek and the Key Lookups will join the results.

"The Definitive Guide to SQL Server Performance" (Don Jones).

## Performance Monitor - SQL Server Objects

<http://content.marketingsherpa.com/SQLServerObjects.html>

SQL Server Objects	
SQLServer:Access Methods	Logical data access.
SQLServer:Buffer Manager Object	Physical data access. Such as data that is not directly accessible from memory, rather it is stored on disk.

## Artifact Description

## Background

The author's country of birth, Nigeria, gained independence on the second millennium (plural millennia). There are 2570 days between 1967-10-15 and 2020-10-23. Nigeria became a republic on 1963-10-01; The difference in days, between the creation of Lagos State and 1967-10-15, is 1475 days; 4 Biblical weeks. The difference in days, between the creation of Lagos State and 2020-10-23, is 1603454400 days (4 months, 2 weeks, 4 days).

1984-07-17 is the date of the author's 17th Biblical birthday (Calculated as 1967-10-15 + 17 \* 365.25 = 1984-07-17). The date is 2020-10-23, Epoch timestamp: 1603454400

Jesus Christ began His ministry at the age of thirty, and the author was born on 1967-10-15 thirty-three years before the year 2000-01-01 = 11766 days (32 biblical years, 8 biblical months). The author's 33rd birthday will occur on 1997-05-10. My thirty-third, 33rd, birthday will occur on 1997-05-10. Between 1967-10-15 and 1968-04-04 are 172 days (5 biblical months). Between 1967-10-15 and 1968-10-15 are 366 days (1 biblical year).
