Ken Adeniji

WordEngineering

A thesis submitted for the degree of Doctor of Philosophy in the Faculty of Science

Thesis Statement: This dissertation introduces <u>AlphabetSequence</u> (2 <u>Conditibians 10:9-18</u>). The <u>AlphabetSequence(anders</u> is the result of a pure function to sum alphabet places <u>AlphabetSequence</u>, as. The <u>AlphabetSequence(andersScriptureReference</u> are the offices from the beginning and the ending of the Scripture. The <u>AlphabetSequenceIndersScriptureReference</u> consists of four parts; there are two references each to particular chapters and verses. The first mention is the forward verse, which the author calculates determining the <u>AlphabetSequenceInders</u> verse in the Bible. The second mention is the forward chapter, and this the author calculates as before, but by substituting the verse with the chapter. Both the backward chapter and backward verse are the corresponding anticidency places.

The importance of this work?

Follow God, as a character.

Where does the Bible list? Creation days, genealogies, allies, plaques, tribes, journey, commandments, reigns, kingdoms, disciples, fruit of the Holy Spirit, churches

Chuck Missiler of Kolonolia House (KHouse) is worthy of note, fishth (Hebrews 11).

There is indebtedness of the author to <u>Unc Scheeum</u>, his Masters degree supervisor, at the <u>University of Technology</u>, <u>Sydney</u> (UTS), 15 Broadway Ultimo (NSW), 2007, Australia. The author is grateful to Tom Osborne, his Artificial Intelligence instructor; an enderson-Sellers, his Object Oriented Enchnology instruction; both also at <u>UTS</u>. The author makes mention of his colleagues at UTS; Decler Mendez, Cesar Orcando, Ricardo Lamas and Peter Mine. The author stretches his open hand to Robyn A. Lindley, his octorate supervisor at the <u>University of Wollonopona</u> (WOW), NSW 2522, Australia.

Theory 2004-11-10 www.JesusInTheLamb.com Part Example Common www A sub-domain defaults to www Commentary Sub-domair Domain JesusInTheLamb Country code top-level domain (ccTLD) .com An abbreviation for commercial. A default domain extension Directory and filename index.html It is not an e-mail address, since it does not include an at sign, @. It defaults to port 80. The issuing of this domain name may be related to commending writing the book titled Ocean Senior. There has not been a follow-up on future artifacts. But when one reads the Bible, the book of Revelation, which starts with the letters to the 7 churches in Asia Minor, does not instigate future alteration. The Rible Database The Scripture Table The content of the Bible SQL Server database is principally the Scripture table. The Scripture table has a composite primary key, which consists of three columns; the BookID, ChapterID, and VerseID columns. The SQL statement BookID ASC, ChapterID ASC, VerseID ASC is for setting the primary key.

There are varchar(MAX) columns which has the text for each Bible version Because there are sixty-six books in the Bible, the BookID ranges between 1 and 66; starting from Genesis and ending at Revelation. The SQL statement ALTER TABLE Bible..Scripture ADD CONSTRAINT CK_Scripture_BookID_Range CHECK (BookID BETWEEN 1 AND 66) The Scripture Table's ChapterID Column The ChapterID ranges between 1 and 150; the SQL statement is for determining the upper limit. The SQL statement ALTER TABLE Bible..Scripture WITH CHECK ADD CONSTRAINT CK Scripture ChapterID Range CHECK (([ChapterID]>=(1) AND [ChapterID]<=(150))] The VerseID ranges between 1 and 176; the SQL statement SELECT MAX(VerseID) FROM Bible..Scripture ALTER TABLE Bible..Scripture WITH CHECK ADD CONSTRAINT CK_Scripture_VerseID_Range CHECK (([VerseID]>=(1) AND [VerseID]<=(176))) will set the range restriction. The Scripture Table's KingJamesVersion Column The author would have considered placing an index on the KingJamesVersion column, but the author found out during his research that the verses in the KingJamesVersion are not unique nor distinct, and indexes are not applicable to where like query cowin leading wildcards. The Scripture View's Testament Column (case when BookID <=(39) then 'Old' else 'New' end) will set this computed column. The Testament column serves as a filter, such as, in the BibleWord. The Scripture View's BookTitle Column The SOL statement

It is for determining this computed column. As expected, there is a correlation between the BookID column, and its corresponding BookTitle column; it progresses from Genesis to Revelation. Because SQL does not support arrays, the author chose to write an SQL EC in function for determining the BookTill when passed the BookTill. Although C# supports Design by contract assertions, the author only checks BookID range validity, and returns NULL, if the argument does not fall within this range. The author could throw exceptions, but the author does not know the side effects nor the full ramifications. Instead of writing and determining the book title using C#, an alternative is to use a database table. A table with two columns, BookID and BookTitle, will store and make extractable the sakeTyck books. For example, the first book of the New Testament, the 40th book, spelling is Matthew or Mathew, double it versus (VS) single t. An improvement on the current implementation is to use soundex to decipher the book title and the corresponding BookID.

The Scripture Table's ScriptureReference Column The SQL statement

Will calculate the conjecture of the BookTitle, ChapterID, and VerseID. Since this is a computed column, therefore, the author is not able to set its Entity Integrity; if it were not the SQL statement

ALTER TABLE Bible..Scripture ADD CONSTRAINT uc Scripture ScriptureReference UNIQUE (ScriptureReference)

Will set its entity integrity. The distinction between raw data versus computed columns is performance and space.

The Scripture Table's ChapterIDSequence Column

When loading data, the author decides the ChapterIDSequence column, and increments it when the BookID and ChapterID, change during loading. The ChapterIDSequence ranges between 1 and 1189, starting in Genesis 1 and ending at Revelation 22. The SQL statement

will decide the greatest value for ChapterIDSequence. An alternative SQL statement

select count(distinct cast(BookID as varchar(6)) + ' ' + cast(ChapterID as varchar(6)) FROM Bible..Scripture Another SOL statement select distinct BookID, ChapterID FROM Bible..Scripture

 Background

- Prophecy and Fulfillment

ALTER TABLE Bible..Scripture ADD CONSTRAINT CK Scripture ChapterIDSequence Range CHECK (ChapterIDSequence BETNEEN 1 AND 1189) will check the range correctness. Although it is good to know the ChapterIDSequence, but it is primarily used to decide the boundaries for scripture reference queries

The Scripture Table's VerselDSequence Column

select cnt = count(*)
from cte

When loading data, the author calculates the VersiDSequence column, and increments it, every time, the BookID. ChapterD, and Verside Chapter during the data load. There are some Bible books that have only one chapter, such as, Obaduin, Phile Indiana, 2014, 2

SELECT BookTitle FROM Bible..Scripture GROUP BY BookID, BookTitle HAVING MAX(ChapterID) = 1 ORDER BY BookID

SELECT COUNT(*) FROM Bible..Scripture

will decide the greatest value for VerseIDSequence, the total number of rows, records, in the Bible..Scripture table. The SQL statement

ALTER TABLE Bible..Scripture ADD CONSTRAINT CK_Scripture_VerseIDSequence_Range CHECK (VerseIDSequence BETWEEN 1 AND 31102)

ill do the data integrity. As said earlier, although it is good to know the VerseIDSequence, but it is primarily used to decide the boundaries for scripture reference queries. The identity functionality which auto-increments, before inserting each row is unsuring this candidate primary key, abidies by the entity integrity constraint; however, The SQL statement

The Scripture_View BibleReference Column

((right('00'+CONVERT([varchar](2),[BookID],(0)),(2))+right('000'+CONVERT([varchar](3),[ChapterID],(0)),(3)))+right('000'+CONVERT([varchar](3),[VerseID],(0)),(3)))

will combine the BookID, ChapterID, and VerseID. This is a convention for referring to Bible rows, by a unique identifier, which consists of the BookID, ChapterID, and VerseID. The leading zeros are placeholders for blocks of IDs, such as, BookID which will have two digits, ChapterID which will have three digits, and VerseID which will also have three digits. It is easier, faster, and more compact to restrict and order by numbers rather than text. Listed below, is the result set, for this SQL statement.

SELECT ScriptureReference, BibleReference FROM Bible..Scripture_View WHERE BookID = 43 AND ChapterID = 1 AND VerseID = 1

| ScriptureReference | BibleReference | | |
|--------------------|----------------|--|--|
| John 1:1 | 43001001 | | |

There is a conversion page <u>BiblioEdereuschtm!</u>. Please note, that the author has not developed this further, it is just an introduction and speculation, which others may wish to adopt.

Most of the applications, extext information, and query the Scripture table. If the user chooses to, he may choose to load another Bible version, into the Scripture table and the application will still work as usual, and there will be no need to make changes to the optication; external of concerns [Sco.]

Optication; thereby, ackieving <u>Seasardian of concerns</u> [Sco.]

Optication; thereby, ackieving <u>Seasardian of concerns</u> [Sco.]

The <u>Exact</u> table's, primary task, is to tell, on the words that are in the Bible. Its information set include each word's first and last scripture reference occurrence(s), and count of occurrence(s). If the word, occurs only once, then the last occurrence is set to null. The incentive for writing the exact module comes from <u>Dave Funt</u>, who will talk of each word's specifics, and <u>Chuck Rissier</u> who noted the first occurrence of the word, <u>low</u> is in <u>Genesis 222.</u> The exact table, is a holding area, for staging information; it could be argued that there is no need, to have this table, because its sources is information from the Scripture table, as all calls and it does not not proceed processing, each time, there is a request. Speed and lower work load are the advantages of the approach of the author; its disadvantage is that the exact table needs re-population, when there is a shift to another Bible version, which the author does not project, at this time. If there is a need, to support another Bible version, then the Exact table loading procedure needs expansion to ad, this flexibility. The <u>Exact</u> result for the author's initials, KAA, is Karkaa, meaning <u>floor</u> (Dobus 15:3). Word Occurrences is dynamic, and is supports the other versions of the Bible.

The Exact Table's ExactID Column

The ExactID is an identity column, meaning the database, SQL Server, auto-increments its value, before insertion. There are 12891 unique words, in the Bible. Exact table. The SQL statement

SELECT COUNT(BibleWord) FROM Bible..Exact

is for determining the word count. The SQL statement

ALTER TABLE Bible..Exact ADD CONSTRAINT CK_Exact_ExactID_Range CHECK (ExactID BETWEEN 1 AND 12891)

is for the range restriction. For storage reason, the author has chosen, not to have a unique index, on this candidate primary key; in-spite, of it being a query item. Future implementation, may issue the SQL state

CREATE UNIQUE INDEX AK_Exact_ExactID ON Bible..Exact(ExactID)

is 789631: this is the count of the words in the KJV Bible

The Exact Table's BibleWord Column

These are the words that occur in the Bible, in the order of their occurrences. The author sets the <u>primary key</u>, the constraint, by issuing the SQL statement

ALTER TABLE dbo.Exact ADD CONSTRAINT PK Exact PRIMARY KEY CLUSTERED (Bibleword ASC)

The Exact Table's FirstOccurrenceScriptureReference Column

This is the scripture reference where the word first occurs in the Bible. The author may set-up the relationship by issuing the SQL statement

FOREIGN KEY(FirstOccurrenceScriptureReference REFERENCES dbo.Scripture (ScriptureReference)

ase note, that as discussed earlier, the author cannot have, a unique constraint, on the Bible..Scripture.ScriptureReference column, since this is a computed column; the author can not keep up the relationship, at this time

The Exact Table's LastOccurrenceScriptureReference Column

This is the reference to the scripture where the word last occurs in the Bible: if there is only one occurrence, the value of this entry is null. As with the FirstOccurrence column, the referential integrity rule applies

The Exact Table's Difference Column

sure the word's longevity; the difference in VerseIDSequence between when it first and last appeared The Exact Table's Occurrence Column

This is the pervasiveness of the word, how often is the word used in the Bible?

The WordEngineering Database

ineering SQL Server database, mainly consists, of four tables - HisWord, Remember, APass, ActToGod.

The HisWord table is what the author heard from the source. The entries in the HisWord table are exact and representable in alphanumeric format (<u>Numbers 12:6-B</u>). In following, the Bible's New Testament convention, where there are translations of Hebrew words to English, <u>which is being interpreted</u>. (<u>Healthers 12:3 Mark 3:41. Mark 15:72 Mark 15:23, John 1:38, John 1:31, Acts 4:26</u>); so also, there are translations of Toroba words to English.

The records, the subtrew ill party enter what he heard. This imple dance mismatch between what the speaker said and what the listener heard, ravely occurs with English words. But it is likely, in the uthor's native language, Protub, with exploits word combinations and privace. The alphabets offer sightly between the English of Yoroba language, Protub, with the legislation of the exploits word combinations and privace. The alphabets offer sightly between the English of Yoroba languages. Yoroba dictionary and translator; a recent success is with the <u>plito/Torosinials.cooling.com</u> end pages.

The HisWord table is most important coloning, at the names suggest, is the word coloning, with is 1 esting in the English of Yoroba words to English. From previous experience, this translation is not always the most right or relevant, and different words may contain the discrite: alphabets, therefore, introduce various meanings (<u>Locorobians 12:30, Locorobians 13</u>). Torosinians 13). To account for the discrepancy in translation, the author sought help from the LORD:

The word column is a potential natural primary key, since duplicates are rare. When redundancies do occur, we may append the sequence to the word, to generate a unique word. We do this manually, but an <u>insert irigoer</u>, will offer automation, and will cut the risk of primary key violation, which leads to gaps in the identity column and <u>loss of data</u>.

The HisWord's Table, commentary column, contains implicit information. This communication is most likely non-verbal, and it is information such as creatures standing or moving towards particular locations or engaging in other visible activities.

As such, from the creation account, on the first day, there is a commandment, and there may be an action/response. The commandment is in the word column God created light (<u>Genesis 13.5.</u>). The action is in the commentary column; God separated the light from the deskrives (<u>Genesis 11.2.4.</u>).

Microsoft SQL Server generates sequential numbers for the HisWordID identity column. The goodness of this technique is that it is a candidate primary key, data loss is trackable, and it provides a sort key. The HisWordID column may serve as the <u>orimany</u> and/ or foreins key, the action or the first constraint.

Tools SQL Server generates sequential numbers for the HisWordID <u>identity column</u>. The goodness of this technique is that it is a cannotes. prince of the grant of the goodness of the second of the general sequential numbers for the HisWordID <u>identity column</u>. The goodness of this technique is that it is a cannotes. prince of the grant of th

The HisWord_view composes of the computed columns deducted from analyzing the Word. The two most significant computations are the AlphabetSequenceIndex, and the reliant AlphabetSequenceIndexScriptureReference, respectively. The author derives the AlphabetSequenceIndex from the word by adding the place of the alphabets in the alphabets set. In the ASCII table, the lower case alphabets are between 97 and 122, and the upper case alphabets are between 65 and 90. The lower and upper case alphabets have the same places. The AlphabetSequenceIndexScriptureReference is the books, chapters, verses separation in the scripture. The author will consider the chapter and verse place, forward and backward. Use the <u>AlphabetSequence.himl</u> to calculate the computed values identified above. The AlphabetSequence is like <u>Gematria. Missar trechrachi.method</u>. Titles of God.

The Remember Table

The Remember table tries to correlate the period between a prophecy and its fulfillment. * The <u>terminus a quo</u> Datedfrom is when the prophecy begins, and it marks the the date of issue or establishing of the prophecy. The <u>terminus ad quenty</u> Datedfrom is when the prophecy partially or entirely comes to pass. "(soinonia House), <u>Datedfrom casov</u> is for calculating the difference between terminus ad quo, versus terminus ad quent; the results are in days; biblical years, months, days; the Common Era. The inspiration for adding the Common Era cromes from <u>wilding-dia.org</u> by Jimmy Wiles.

To determine the HisWord and Remember entries? The author chooses to separate the particular and prompted inputs (<u>Luke 4:19</u>).

First, inside and last dates.

ActToGod

This is subjective work; the author applys intelligence to find patterns and resemblances in the Bible

Type of Scale Introduced on July 1, 1963, the ZIP Code system (an acronym for Zone Improvement Plan) traditionally contained five digits. In 1983, an extended code was introduced named ZIP+4, these postfix a hyphen and four additional digits for more specific addressing. The author does not validate the Zip Code, since it is not a world standard. 2025-06-07T07:08:00 <u>Dur view of the world attains us.</u>
 Telephone number. mbers may serve as tags or labels which are quantitative with no values Categorical Scales This may be the physical count of word occurrences in the Bible.
The count of books that are in the Bible groups. For example, there are 5 books by Moses, and 4 Gospel books.
The SQL COUNTY function returns the number of rows that matches a specified criterion.
The Microsoft SQL Server variable @@ROWCOUNT returns the affected rows from any statement, even if it's not DML or a SELECT query. An absolute scale is a count of individual, distinct items in the set. In an ordered list HTML element, 2025-06-08T09:22:00 the list items are sequentially arranged.

An identity column is a numeric column in a table that is automatically populated with an integer value each time a row is inserted.

The SQL ROW, MURRERQ (function is a temporary value calculated when the query is run. To persist numbers in a table, see IDENTITY Property and SEQUENCE.

The @counter-style CSS at-rule lets you extend predefined list styles and define your own counter styles that are not part of the predefined set of styles. The @counter-style rule contains descriptors defining how the counter value is converted into a string representation. Ordinal Scales An ordinal scale puts the attribute in a linear order. There are no operations or computations done with it. **milary famis.
 *Nohos scale for hardness (geology) of minerals
 *Scaledial scale for the strength of peppers
 *Scaledial scale for the strength of peppers
 *Completely Automated Public Turing Test to tell Computers and Humans Apart (CAPTCHA) is a type of challenge-response turing test used in computing to determine whether the user is human in order to deter bot attacks and spam. They have a linear ordering, and an origin. Having an origin prevent some of the transitivity problems. The Contact table contains a title column. SQL offers a group by, and having clause. Strength of password? Sou An interval scale is based on a standardized unit or interval. Another property of these scales is that they have no natural origin. Interval Scales Date difference, UNIX epoch? These scales have a base unit, natural origin and meaningful operations. We also allow the creation of compound units with ratio and interval scales. They are called ratio scales because the units of measure are expressed as multiples or fractions of some base unit.

Ratio Scales

Relational Database Hierarchy

- Catalog: Is a collection of databases, for example, Bible, WordEngineering, URI.
 Schema: Is a collection of objects, which may include tables, views, indexes, stored procedures, triggers.
 Table: Is 2-dimensional with horizontal rows and vertical columns.
 Column: It is a physical actualized attribute.

| Determinant | Functionally Dependent | Implementation | | |
|--|---|--------------------------------|--|--|
| Bible.Scripture.BookID | Bible.Scripture_View.BookTitle | Bible.udf_BibleBookIDTitle() | | |
| Bible.Scripture.BookID, Bible.Scripture.ChapterID, Bible.Scripture.VerseID | Bible.Scripture_View.ScriptureReference | Bible.udf_ScriptureReference() | | |
| Determination is achieved through computed columns. | | | | |

(Allen G. Taylor, 2024).

Index Query Type

| Query Type | Commentary | Example | Structured Query Language (SQL) | |
|-----------------------|---|--|--|--|
| Point query | It will return only 1 record, and it is restricted by an equality condition on the primary key or unique index. Useful for searching for a particular verse. | | SELECT * FROM BibleScripture_View NHERE VerseIDSequence = 1 | |
| Multipoint query | It may return more than 1 record, as there may be multiple records. It is restricted by an equality condition on part of a potential composite key. | Useful for searching for a particular chapter or book. | SELECT * FROM BibleScripture_View MMERE ChapterIDSequence = 1 | |
| Range query | It returns a set of records whose values are within an interval or half interval. If it is restricted by both lower and upper bounds, then there is an interval. It is a half interval, if it specifies only one bound. | | STLECT * FROM Bible. Scripture_View MHERE VerselDSequence BETWEB! 1 AND 18 ; SILECT * FROM Bible. Scripture_View MHERE VerselDSequence <> 5 | |
| Prefix match query | The author is unfamiliar with any use-case where only the first part of the wildcard is searched. The first part of the scripture reference is similar. For the BibleWord searches, the author uses like for match queries. | | SELECT * FROM Bible., Scripture_Vine MARRE kinglamesVersion LIKE (SELECT TOP 1 KinglamesVersion FROM Bible., Scripture_Vine GROUP BY KinglamesVersion ORDER BY COUNT(KinglamesVersion) DESC) | |
| Extremal query | al It returns either the minimum or maximum extreme. Statistics | | SELECT * FROM BibleScripture_Vinu MMERE VerseIDSequence = (SELECT MAX(VerseIDSequence) FROM BibleScripture_Vinu) | |
| Ordering query | The records returned are sorted. | The results of the author are normally in ascending order. | SELECT TOP 10 * FROM BibleScripture_View ORDER BY VerseIDSequence DESC | |
| Grouping query | uping The reports returned are prouned Parely does the author group must by issuing the corpus by days. | | | |
| Equi-join query | The records are retrieved from multiple sources. | The author uses views for table joins. | | |

Designing Software Architectures: A Practical Approach Making Design Decisions

Designing Software Architectures: A Practical Approach Making Design Decisions

Principle 1: Des Parts

Principle 2: Check Assumptions

- This whole thing started with keeping <u>a work reference</u>.

- Even though Yoruba is the native language of the author, he still and invariably relies on translate.google.com.

- The author depends on a typing assistant

Principle 3: Explore Contexts

Information re-use was the driving force of this software engineering. The author sought to learn programming and retain knowledge.

Principle 4: Anticipate Raiks

The underlarable outcome and their probability of re-occurrence will include:

- Data loss or corruption because of issuing the distalase modification command and lack of timely archiving the control of t

crosoft:
- Introduced .NET core and Model-view-controller (MVC).
- Inability to restore deprecated Microsoft SQL Server backup versions.
- Command-line reverse-engineering of database script does not conform with the newly released data types.

Command-line reverse-engineering of database script does not conform with the newly revenues usus sypes.

Principle S: Assign Priorities
The author prefers to first build and implement his strengths and specialties in the back-end (database and process logic), prior to designing the creative user interface.

Principle S: Defenie Time Fortion

What neered has Sord used?

1997, priorition of age: I have brought something against you, but I Am with you.

2007, generation thempsan: This insaturbation will bring water.

Principle 7: Generate Nulliple Solution Options

Stownsestale act. I. a. amending others 2 I have to relax my perception to technology providers.

Principle 8: Design Around Constraints

Belational databases offer the ability to set constraints.

 Data Import...data input. Initially, the author created an XML file and imported it into database tables via a C# program application. When this process malfunctioned, the author suspended his work. The author resumed work by doing data input via Microcoth SQL Server Management Studio grids. This diversion did not require database changes, achieving separation of concerns.
 The use of non-supported beautifying cas is responsive web disaign.

(Humberto Cervantes, Rick Kazman June 2, 2024).

Hitachi Modern Data Infrastructure Dynamics Drowning in Data: A Guide to Surviving the Data-Driven Decade Ahead

• Microsoft SQL Server offers the capability to cut off the size of the result set. The GetAPage.html gets minute data from the various database tables and views. The user may be given the opportunity to customize which results to retrieve, for example, AlphabetSequence, BibleWord, HisWord, or Dictionary, A literate person may not need as much data. Setting this restriction will be concise queries.

• An approach is to offead computing to the local host.

(Hitachi 2023).

Database Performance

- Query optimization: Server-side database processing offers the best performance scenario. The use of stored procedures and functions is recommended. The hold backs are their deployments and SQL variances. Prepared statements are fast, resource lenient, cached, and they prevent SQL injection attacks. The author falls back on dynamic SQL for complex queries.
 Indexing: The author is well aware of the pros of indexing, but its cons include additional space and effort. The less performant productive database objects are keys and constraints.
 India Nodeling: Romalization
 I. First, Normal Form (INF): A relation meets this rale when each attribute has only one value. Another condition is that all the attribute values are atomic and non-composite. In the HisWord table there may be multiple contacts, but only the most prominent contact is recorded. A contact must be first created in the Contact table, prior to its referencing, to satisfy its referential integrity constraint. The author does abide with INF in the HisWord table. The URI column may contain multiple email addresses. In evaluation column may not be a unit.
 Second Normal Form (2NF): The ActToGod table does not comply with this rule, since its Minor column is functionally dependent on its Major column. Computed columns minimize the potential for this.

(Craig Mullins, 2023-12-18)

Database Management System (DBMS)

There are 2 types of DBMS. These are:

Shared file-based: For example, Microsoft Access
 Client/Server: For example, Oracle, SQL Server, MySQL

SQL Usage

| Statement | Commentary | | |
|-----------------------|--|--|--|
| sp_databases | The sole work of the author, the WordEngineering database size, is currently 33317504 bytes. | | |
| sp_server_info | The database version is Microsoft SQL Server 2022 - 16.0.1000.6 | | |
| sp_spaceused | The WordEngineering database currently uses 32536.63 MB. | | |
| sp_statistics HisWord | The cardinality of the HisWord table is 114243. | | |
| xp_fixeddrives | Returns a list of physical hard drives and the amount of free space on each one. | | |
| xp_msver | Returns version information about SQL Server. | | |

SQL Statement

| Statement | Commentary | | |
|---------------------------|--|--|--|
| Select | The select statement for data retrieval is the most popular statement. Most select applies to Bible Scripture_View. Using the select statement is safe, but it may impact performance. An alternate replication target repository may serve queries. | | |
| Insert, Update, Delete | The insert, update and delete statements are for data maintenance. | | |

Where Clause Operators

| Operator | Commentary | | | |
|-----------------------------------|--|--|--|--|
| =, <>, !=, <, <=, !<, >, >= !> | The operators listed will check for a single value. The operators that consist of 1, will check for non-matches. In most cases, rarely is this in use_! < or/and !>. This is the first timehe is becoming awareof these operators. Overving for a date or number will search for particular types, | | | |
| BETWEEN | This is a range check that accepts a beginning and ending value. It is not highly used. | | | |
| NULL | No value | | | |
| IN | A comma-delimited list of valid options within parenthesis. | | | |
| LIKE | Wildcard filtering | | | |

(Ren Forta, 2017)

Database Scaling

- The transition to computed columns results in smaller storage requirements.
 Microsoft SQL Server supports multiple databases; therefore, reducing archive needs.
 Normalization, object-to-relational mapping, is light load.

Database Exclusivity

Row Limit

| Title | Commentary | | |
|--------------|--|--|--|
| TOP | Set a limit of the number of rows returned or a percentage of the rows from the source. | | |
| SET ROWCOUNT | The database will retrieve all the rows, but if there are excessive rows it will later <u>limit to required rows</u> . | | |

Where Clause

| Title | Commentary | |
|--|---|--|
| Like wildcard | Preceding or following restriction '%%' | |
| Check for NULL | IS NULL versus (VS) IS NOT NULL | |
| Between range check | Lower and upper limits | |
| Logical comparison | <, >, =, <=, >=, <> | |
| Table join superceeds the previous column key equal to | FROM table join primary and foreign key | |

Select Clause

The select clause may explictly include a column list. Pre-compiled statements that implictly cater for all the source columns, may not be up-to-date on the column-list Group By Clause

The group by statement is not for detail listing, except when it is used to regress to the distinct clause. Group by supports statistics, such as, count, sum, min, max, avg. Having By Clause

The having clause augments the group by clause. It places restriction on the group(s) returned. Insert Statement

Inserts give room to omit the default columns. The Identity Insert statement also grants explicit entry of its identity column

Nullable Column Information unknown is useful for forwarding processing, until and if the information is added. Outer Join stands for this purpose

Constraint

Primary and foreign keys, unique indexes and check constraints.

Data Cleansing

** Is the source of bad data input internal, on-line users, or error in programming? He doesin't envision error in reference data.

**Does the vendor have data definition language (DDL) to pre-empt data corruption?

**Data type and sizes: String, number, data, logic boolean?

**Not nullable? Can not be empty?

**Range check: Expense must be greater than zero? Dates of activities must be after the establishment creation date.

**Check constraints, for schedule, dated from must precede dated until.

**Non-surrorise primary and foreign keys with unique indices help to ascertain data.

**Non-surrorise primary and foreign keys with unique indices help to ascertain data.

**Is to be data incomplete, such as abdreadation, for example: due can call the control of the c

The author prescribes the steps below to begin database set-up and usage

- 1. Acquire a database management system (DBMS). Various varieties of DBMS are available. The user may download a DBMS, get a compact disc, or select from the cloud.

 2. Install a DBMS.

 3. Decide on a user interface for managing the database. For Microsoft SQL Server, the choices include the SQLCmd console utility or the SQL Server Management Studio or Azure Data Studio.

 4. Create database. Microsoft SQL Server supports multiple instances and databases.

 5. The data definition language (DMI) uniqued the commands to create, after or delete tables, views, primary and foreign keys, indexes, constraints and defaults.

 6. The data manipulation language (DMI) are commands to insert, update, and delete the database rows and columns, with the option to use the where clause.

 7. The SQL Server mainterance plan is for database housekeping, for example, backup, restore, and re-arrangement.

 8. Stored-procedures, triggers, and functions are programmable logic.

Indexing

The author manually indexes according to the following progres

Accessibility

Tier Language Commentary

- Image elements have alt attributes; so that the reader may perceive what it shows
 The software offers the option to generate an image in the .png format
 The author does not duplicate hyperfinks
 The author does not duplicate hyperfinks
 The user may solely use the keyboard navigation to tab between the various controls, this substitutes for the taborder attribute. The autofocus attribute is for setting the cursor on the first input control.

Programming

The Author Programs in the Following Tiers and Languages The front-end code may run on a desktop, laptop, or mobile telephone that offers a user interface (UI). The task is to accept the user query and to display the result. Initially, as a novice

ber, he records it in the HisWord's table, Word column, as a numera

| Front-End Browser | (HTML), Javascript, Cascading Style Sheet (CSS) | programmer, the author words specific code for each user request; later, the author rests on generic code which will handle multiple variety of requests. This is high-level programming, and the skill- see entry level is minimal. The author also believes that the users should not require any formal training to use his work. Customization is achievable by varying the request options, such as entry form selections, query arguments, or data attributes. |
|----------------------------|--|--|
| Middle-Tier Application | C#, Embedded-SQL | For backward compatibility, the author does not envision moving away from his legacy code investment in Microsoft. The only shift is positioning code away from database inconsistencies in backen of residency. To code, compile, debug, deploy, the experience of the author is with Microsoft Visual Studio and command-line tools. |
| Server-Side Backend | Standard Query Language (SQL) | The author most recent experience is with the Sybase and Microsoft Transact-SQL assortment. Now a days, to be compatible and after experimentation; the author rarely uses Standard Query Language - Common Language Runtime (SQL-CLR). The author does database data entry, maintenance, development by using the Microsoft SQL Server Management Studio. |

JavaScript Basics: Data Types

- JavaScript supports three keywords for declaring variables. These are the var, let, const keywords.

 From its pre-conception, JavaScript supported the var keyword. When the author does not precede a variable initialization with a keyword, then the variable will have global scope. The author averts from variable hoisting. Variable definition are keyword is resulable. The strict mode is a later addition to JavaScript that helps is enforcing variable rules.

 For one-time definitions, such as, issuing the document, getElementRyld command, the author relies on the const keyword.

 Unlike some typed inaquages, JavaScript does not support explicitly specifying the type of a variable.

 JavaScript string comparisons are by default case-sensitive.

Functions and Methods

- Methods are functions that are referable from a class. Methods support object orientation by offening encapsulation, inheritance, polymorphism. The author uses functions when placing localizable code inside the script section of a HTML flep otherwise, generalized methods are referenceable from a JavaScript library.

 JavaScript retain functions as first-class citizens, and they are passable as variables. This abstraction feature is rarely necessary.

 JavaScript does not support method overloading. The earlier arguments array variable and the later parameter offault initialization supplements.

 The author consistently uses annowns functions for processing the success and error returns when using [Query to access web services.]
- Conditions

The author emulates the Microsoft ASP.NET Page. IsPostBack property check, and when it is not so, parse the guery arguments; otherwise, skip the parsing and proceed to page submittion.

• For displaying the Bible book titles, the 66 books are in a JavaScript iterable array. This reduces the data load from the server to client, and it offers spelling flexibility. The select options resemble similar customization

HyperText Markup Language (HTML) Document

- The DOCTYPE is the first declaration in an HTML document, and it is the conformation standard specification.
 The himit tag is the root and the container for all the other tags.
 The head tag contains the title and he mela tags for the search engine optimization (SEO). The various documents will indicate the cascading style sheet (CSS) directive.
 The body tag contains the visible content of the document. Its resultSet or resultTable div will contain the particular details that the program generates.

Data Science

The data that the author fundamentally operates on is the word from God. The initial and primary data is textual, but now the author places importance on dates and numbers. What should you do with a number? Even though the Hebrew language is AlphaNumeric, the numbers in the Bible are in words (<u>Leviticus 19:26</u>). When the author receives a num

- The author extracts knowledge from data; by finding meaning to the word.
 The author uses scientific methods, such as counting the number of occurrences, determining the first and last occurrences, and excluding the parts of speech.
 The actionable insights take, so far is to computere the work.
 The vast majority of the work is structured data. Unstructured data does not fit into the background of the author.
 The splittation domain is Bible studies; how relevant is the Bible to our work?

Practicing Data Science

- Empirical, find implication from the Bible?
 Theoretical, to determine a better way to doing work?
 Computational, is human labor replaceable?
 Data-Driven, constraints help us to sanitize data. Default values reduces task, are less error prone, brings arrangement.

- The Bible is our primary source of data.
 The author records information sources. This is either a person or media?

What you can do with Data

- Data Acquisition: The Bible is available on the Microsoft Access database.
 Data Stonge: The author imports this tabular data into the Microsoft SQL Server relational database.
 Data Processing: The SQL Select statement is the means of retrieving data from the database. This is not always a monolithic fashion; since there are various ways of composing the queries.
 Visualization / Human Insights:
 The raw data is viewable on the Microsoft SQL Server Management Studio.
 The web service, Jasms, Tile, which is accessible from the Browser, offers the opportunity to fill-in the query and see the JSON result.
 The Intim presents the result in a human readable format.

Defining Data

A brief introduction to Statistics and Probability

At the beginning of the study, the author made a presumption that words are unique. Later the author found out that there are duplicate Bible verses

Structured and Unstructured

Structured data is alphanumeric put in row-column. Unstructured data is either text, image, audio, or video. This research is mainly structured data.

The author imports complete, not NULL nor empty data, such as the Bible and the dictionaries.

The author archivers data validity by constraining and restricting inputs. Since this is not a commercial work, Key Performance Indicators (KPIs) are not vital.

The author references and is not tampenin with authorizative Bible work; this helps to make sure correctness - accuracy, consistency, integrity.

Timeliness is effectual in the single user data entry lable, HisWord.

- The information which the author documents in this section of the paper; is the Data Declaration Language (DOL) and Data Dictionary, which is available at <u>Gilfitub.com SQLServerDataDefinitionLanguage(DOL Repository, The Data Manipulation Language (DML) is too large to fit into the Gilfitub.com repository, and it is intellectual property. For the people that have access to the distabase, this private information is available by generating the distabase script.

 Contact is a privary entity, and it is definited the people and organizations that the author has a relationship with. These affiliations are family, friends, business, or public service links. As recordable are their street, e-mail, web addresses, and telephone numbers. The author stores the various information exchanges with these people. A known date of birth, is for notification of the subject's birthday and relative age. To keep up with the privacy and sensitivity of this personal information, the author is not sharing his highly confidential data.

 The relationship between a contact and its related information is non-to-many; that is a contact may have multiple addresses. The other 2 types of relationships are one-to-one, and many-to-many.

 A URI is a link to a ware resource that will add to the authorses' the worlded of the address and the deckey shall the deciders and the address and the deciders and the address and the deciders and the deciders and the deciders and the deciders </u>

Database and Application Server Source Files

The author chose a multi-tier architecture for building the application. The database layer is made-up of tables, views, stored procedures, functions. The database tables are easily storable and movable to other storage media. The SQL Server's data definition language (DOL), now supports DateTime2, and its date range extend between January 1, 1 CE through December 31, 5999 CE. Some dates in <u>Wildordia</u> mention these dates. The HisWord_view contains computed columns, which depend on entries in the HisWord table. The author extracts database information by building query statements.

The application layer is the bridge between the user interface layer and the database layer. The application layer compiles into a single <u>Promatic link Bizary</u> (DLL), called InformationInfrantS. Inc. The application layer consists of four namespaces, namely informationInfrantS. Processology, Informat

The .HTML files will work in all browsers; that support AJAX. Most of the interactive web pages are reliant on JavaScript to work, mainly because they use Ajax to interact with the server. Each .HTML file, performs specific task, and may have a corresponding back-end associate, web service. The unobtrusive JavaScript file 9237_is container e-usable code that is not. HTML files specific. The .HTML files originally contained the .CSS specifications; however, the author now places styling information in a single external file, 921_525_55. This will reduce the states of the .HTML files, and it helps to achieve a considerant user interface.

The work of the author is interactive, and there are links to questions and answers pages. Most of the input entries are textual, but some are numeric, datetime, select options. The answers are mostly in tabular format.

(Vaihhay Verdhan)

A HTML document contains:

- Text content: The author informs the reader by describing His word.
 References to other files: The author refers to external files, such as UML images
 Markup:

- Elements: The anchor tag is the most specific.
 Attributes and Values: The author benefits from the introduction of the customizable data- prefix attribute

(Elizabeth Castro).

Cascading Style Sheets (CSS)

- Base Rules: A base rule is an element and not a class nor ID selector. The author does not use CSS Resets. The author issues element selectors for the html, body, table and row.
 Layout. Bules: There are no layout. rules, such as header nor footer.
 Module Rules: The table of content (TOC) is for page navigation that the author offers using class names.
 State Rules: A state rule is for toggling, such as using Javascript to set the visibility.

(FrederikBulthoff, 2019) In most cases, there is a one-to-one mapping between the .HTML, ASMX, CS files, and the database relational table, Bible..Scripture. For simplicity and clearage of use, the .HTML and .ASMX files, support one operation. GetAPage.html is a cumulation of separate .HTML files. All the web services files support the SOAP request format and return SOAI, (Query acceptable of the POSI, HTTP web, The author stringfield the data he passes to the web services in the body of the message. Errors are unforeseen, in the arrors on the back-off, and display quantitative message. Security is facing; this is passed as the subject of the support of the

Itabiness 52.2.)
The Web Service Description Language (WSDL) is available, for example, by specifying the URI, <u>AlphabetSequenceWebService.asmx7WSDL</u>, To generate a proxy code, issue the following command; usel.exe /language:CS / nanespace:Inforestion.Inforast.Processing; / cut: "AlphabetSequenceWebService.exervice.asmx7WSDL," as penetate a proxy code, issue the following command; usel.exe /language:CS / nanespace:Inforestion.Inforast.Processing; / cut: "AlphabetSequenceWebService.exervice.proxy code." http://ecceptrocept.proxy code." http://ecceptrocept.proxy code.

A lecture of our beginning ('tailda Na 'm, 2015) The business rule is storable and processable in C# , (cs), source files. The dynamic link library, (.dll), is callable from everywhere. GetAPage.html computes AlphabetSequenceWebService.

The author can not make a business decision, to go to a very service, to retrieve whit is locally redicable.

The usp_DatabaseLogSize stored procedure is for determining the size of the databases data files; and it is available at <u>T-SQL to find Data Log-Size and Other Useful information -SQL 2000/2005/</u>
Database Size

| Name | Data Files | Data MB | Log Files | Log MB | Total Size MB |
|-----------------|------------|---------|-----------|--------|---------------|
| Bible | 5 | 304 | 1 | 82 | 386 |
| BibleDictionary | 5 | 38 | 1 | 17 | 55 |
| WordEngineering | 5 | 138 | 1 | 1816 | 1954 |

Database Standard

Alfabases Ucusys: 1. The relational model is for storing information in tables. 2. The author normalizes data using Object-relational mapping. 3. All the databases are CUTP (Online Transactional Processing), not OLAP (Online analytical processing). 4. Avoid deadlock occurrences by not permitting user database updates. 5. All the transactions follow similar routes and sequences, and the author practices granularity with the locks. 6. Database updates are through stored procedures, which recognize and avoid the potential of integrity violat.

- The secretive web.config file contains the database access information.
 The web.config file does not explicitly mention the user login name nor password.
 Give access rights to roles, not to specific login identities nor user names.
- Database Data Types

- Choose matching data types between the database and application layers.
 Only pick varchar(max) and nvarchar(max) as the data type, when it is essential to store large data.
 Prefer the decimal type; when recording the amount in currency rather than using the float type.

Nullable Type

1. Consider defaulting textual data to empty string; instead of NULL.

Indexes

- Database changes lags with indexes.
 The field sequence in indexes should follow the frequency of usage.
 When using a composite index, place a clustered non-unique index on the major column.

Naming Conventions

- Overall, consistency encourages lowercase keywords. Keywords in lowercase are mandatory in case-sensitive programming languages like C# and JavaScript, but not in SQL. 2. Use Pascal casing for naming literals, such as, balles, columns, stored procedures and functions.
 3. Use Carell-casing for naming parameters and local variables.

(ABB Asea Brown Boveri)

Performance

The web page components practice of the author, include

- Keep the count of web page components to a minimum
 Specialize input entries by using the most simple and basic component
 Reduce bloating by limiting the use of framework and library

Performance Suggestion

- 1. The most consistent id='resultSet' is usually for AJAX. The self-descriptive tags that do not influence the result normally do not specify IDs, this is left to the browser's decision.

 2. Browsers place restrictions on the number of concurrent connections to a particular domain and the overall parallel connections. Consider spreading out the resources to multiple domains.

 3. The author standardzed on the nog image format because there are few colors.

 4. In the year 2008, when the author tried to move away from html table layout styling, the rendering was anaemic.

The Cascading Style Sheets (CSS) performance suggestions include:

- The JavaScript performance suggestions include
- 1. Make use of browser cacheable content delivery networks (CDNs). For example, http://code.jguery.com/jguery-latest.js

High Performance Browser Networking

For Internet connections, the contributing factors include:

- 1. Propagation delay The consideration is the speed of light in the medium of transport. On the Internet the speed varies according to the medium which may be (DSL, cable, fiber) in order of performance. The speed of light, which was presum constant, but now, may be declining. The author chooses the most accessible route. Typically, working within the confines of a building. This research excludes other participants. The environment is transplantable for other uses. The route and environment impose limitations on the local host. The transcruota command on the linux operating system, or the similar tracerd or pathiping commands on the Windows operating system, will give travel speed. The author will bold into the last tendencies of the Internet Service Providers (ISP) in the area. The receive window (rwn) of the server should be adequate, since the users do not upload videos nor images.

 2. Transmission delay The time to input the packet in the linux, which is determined by the length of the packet and the data rate of the linux elastra's behalf, the Bible book ID is transmitted to the client and convertible to the title by JavaScript. Tromatting is done by the client.

 3. Processing delay The duration of processing the header, detect bit-level errors, and determine the other end. In an Intranet environment, this is done locally.
- Javascript. rormating is one by the client.

 3. Processing delay The duration of processing the header, detect bit-level errors, and determine the other end. In an Intranet environment, this is done locally

 4. Quesing delay The processing wait time is dependent on the browser supporting multiple page tabs, and other applications using the network?

Most of the work of the author is available at the following locations, in the order of efficiency

1. The current web page, such as, 2015-10-23DoctoralDissertation.html file

- <u>Title</u> <u>Abstract</u>
- Acknowledgments
 Theory
 Results and Discussion
- Terminology
 References
 Appendices
 Background
- Prophecy and Fulfillment

- The general Cascading Style Sheet, 9432.css file
 The general JavaScript file, 9432.js file
 The specific Web Service file, such as, ScriptureRefe
 The dynamic link library file, InformationInTransit.dl
 The database

- The author does not use background-image nor list-style-image
 The thesis only contains images for database and object modeling
 The author does not use <u>CSS sorite</u>; since it requires additional storage spa
 The author does not use Data URIS
- The author does not support nor take advantage of Expires Headers
 This research excludes compression and minification; because the file sizes are low and technology conformity.

Web Performance 101 JavaScript:

- 1. The author will not consider minification. Because he cannot justify compressed file duplicate mix-up. A single compressed file is less readable and maintainable. An automated build and deployr 2. DOM chatiness? The author currently build se he entire table, and he sets the innerhtml of the div. For faster visibility, the author may build a table by first setting its header, and appending rows 3. The author should take advantage of the async script parameter. Because the actions of the scripts are invoked after the page load.
 4. Code splitting with import serves well for web components and rare tasks.

Web Performance 101 Cascading Style Sheets (CSS):

- 1. Critical CSS is in the style sections of HTML files.
- Web Performance 101 content delivery network (CDN):
- The author is deprecating the use of the jquery library which was solely used for AJAX, in preference to the fetch states
 The author only uses the latest version and a unique uri for each library available on CDN.

- - Naming Conventions, SQL for example, is generally case agnostic

Data Structures and Algorithm Analysis

The exact-match query is to search for a single Bible book, chapter, or verse. In the case of a verse, the top I clause is appropriate to efficiently return a single record. The range query is to search for information within a boundary. The Remember table's ResultOutputFirst Discouline is a rare Boolean datatype. It is for documentation purposes and it says the Figure 1 is a surpose to the control is known and it is used to determine either the FromDeted or UntilDated column. An identity column as a specialization of the integer data type, in that the database issues the next sequence. Most of the tables make use as urrogate primary key.

The aggregate or composite type attempts to store each particular type in its own table, when this is not optimum then normalization calls for several tables distribution joined within one view. The contact record is a single logical datatype multiple physical implementations.

When the author hears a word, what does he do with it? He dates the word, he expresses it grammatically, and he finds a place for it in his memory. For a later date, the author reminds himself.

Problems, Algorithms, and Programs

When we hear the word, how do we endeavor in Him?

Function, Input, and Output

The input is the word as the only parameter. The output will find meaning in the word of God. The response of the computer is within the range of the result set

Sets and Relations

The alphabets and words make-up the author's work. The composition of the words is indefinite.

- The ASCII table set composes 26 upper and lower case alphabets. Their places will originally decide the AlphabetSequenceIndex.
 The digits and their larger representations of numbers are also in the ASCII table. These are computable in determining the AlphabetSequenceIndex.
 The null character is in the Word column, when there is only commentary.
 Cardinality: Microsoft SQL Server places a limit on the maximum size of a VARCHAR column type, 8000. When there are 2 or 3 words, the author does further cor

Asymptotic Algorithm Analysis

The computer serves the author in due time. The size of the users' input, the number of users, and the complexity of their requests will weigh on the system.

This is the approximation neasurement of hos log is cloud indemnity take to determine the Aphybate-log-inclineds. The prediction is the length of the word multiplied by the average period taken to determine the place of each alphabet. The grades is that the processing time increasing, at the tax of the input grows. There is limited growth on the growth of the contraint.

Best, Worst, and Average Cases

There is no variation in time for determining the AlphabetSequenceIndex and AlphabetSequenceIndex ScriptureReference. The size of the word will influence AlphabetSequenceIndex, but this should not be noticeable. When parsing and retrieving

Prophecy and Fulfillment

scripture reference and Bible word, there may be size and time differences.

Calculating the Running Time for a Program

if (Isalpha(word[index])) alphabetSequenceIndex += (int)word[index] - asciiA + 1;

The cost of executing the for loop is $\Theta(word.lengthSize)$

One of the few occasions that the author uses a list is when building the Exact table. The author creates a list of words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a detailed to the check the contract the existence of each word in the list. When it is a detailed to the check the check the contract the existence of each word in the list. When it is a detailed the check hours to complete.

The author is comfortable and familiar with using datasets and datatables for work areas. The author uses JSON as a transport medium.

A generic grouping of concepts and their representation

| Module | Unit | |
|---------------------------------|---|--|
| GetAPage.html | retrieveAlphabetSequence() | |
| AlphabetSeguenceWebService.asmx | Query(word) | |
| AlphabetSequence.cs | ID(word) | |
| AlonabetSequence.cs | ScriptureReference(int alphabetSequenceIndex). | |
| DataCommand.cs | DatabaseCommand() | |
| WordEngineeringSchema.sql | $Word Engineering. dbo.udf_Alphabet Sequence Index Scripture Reference (ID)$ | |

GetAPage.html Program Flow

The even handlers are the first code the system executes. These are the page load, submit click, item change events. If this is a page load event, and it is not a <u>costback</u>, and the <u>query string</u> has a word argument, then the processing of the word occurs. If this is a postback, bein it is the user's date entry that the system processes. The term processing means the browner submits the word to the value and synthesis can be short exceed an experimensor where such results.

International Standard ISO/IEC 25010. Systems and Software Engineering -- Systems and software Quality Requirements and Evaluation (SQuaRE) -- System and Software Quality Models. First Edition, 2011-03-01.

Maintainability

Corrective Maintenance

This is error correction

Adaptive Maintenance

Transition from building console to web applications

Perfective Maintenance

The author now considers partial and lookback scripture references. Such as, when there is no book title, then this default to the earlier book title Choosing the right. <u>MET Framework Data Providers</u>. The author standardized on ODBC; the other choices are OLE DB, or SQLClient.

Preventive Maintenance

Metric Quality Profiles

Unit Size Quality Profiles

| Module | Unit | Lines of Code |
|---------------------------------|---|---------------|
| GetAPage.html | retrieveAlphabetSequence() | 40 |
| AlphabetSequenceWebService.asmx | Query(word) | 10 |
| | ID(word) | 50 |
| AlphabetSequence.cs | ScriptureReference(int alphabetSequenceIndex). | 10 |
| DataCommand.cs | DatabaseCommand() | 90 |
| SQL Server | WordEngineering.dbo.udf_AlphabetSequenceIndexScriptureReference(ID) | 105 |
| Sum | | 325 |

Determining the AlphabetSequence takes 325 lines of code, which starts and callbacks 40 lines of AJAX code and concludes with 200 lines of database interaction. A unit of code should not exceed 15 lines.

All the web services (.asmx) files return JSON by default; the AlphabetSequenceWebService.asmx file, Query method, returns a hand crafted JSON which has a numeric AlphabetSequenceIndex and a string AlphabetSequenceIndexScriptureReference

Limit the number of branch points per unit to 4

The C# compiler will translate code to an intermediate language (IL). This code runs Just In Time (JIT), according to the condition clauses and operators In the case of dynamic SQL, re-compiling imposes cost.

The Twelve-Factor App

- debase: The WordEngineering application is storable in the <u>Gilthiub.com</u> version control with a one-to-one mapping between the codebase and the application. There are multiple but separate websites that access the InformationInTransit.dli. The thor builds the InformationInTransit.dli in each production's website bin directory. The steps for storing files in Githiub.com are:

- author builds the InformationInTransit.dll in the developer's working directory, and deploys the InformationInTransit.un in eart processor's wearant.

 1. git attaits
 2. git add
 3. git commit
 4. git push
 1. git push
 1. git push
 2. git push
 2. git push
 3. git commit
 4. git push
 4. git push
 5. git push
 6. gi 5. Build, release, run: These are the stages that a code goes through. Code complainto is deferrable for scripting, as opposed to compliable languages. Ever since the advent of the Java programming language, Just-In-Time (IT) execution has be the norm.

 5. Processes: The author's earlier applications were stand-alone console applications that are run by the .HET Framework, later examples are the ASP.NET web pages and services. These applications run in a single thread, except they share static variables. The SQL Server encompasses services which are stoppable to do data files backup.

 7. Port binding: Web serves traditionally run on port 80, and SQL Server runs on the changeable port 1433. Javascript's Node and Python's Flask run on diversified ports.

 5. Concurrency: The author's take on expendable work includes the following:

 - Pure function:

 - Pure functions:

- Pure functions
 On-demand compilation of web pages and services
 Adjustable time-out setting for the database and web request threads
 Adjustable time-out setting for the database and web request threads
 The NET Framework innitive work, such as, the singleton design pattern, and static method calling and variable(s) initialization
 One-velopment/production party; By first finalizing non repeatitive work, the author can now focus on specialization activities.
 The time ago: These include plaing the common work in a certain environment. Superscriping the waterfall mathedology with the more recent process, Agile and Scrum.
 The personnel gap: Dev/ops expertise
 The tools ago: The author prefers the statio infrastructure to the fly-by-night trends. Testing on the multiple operating systems and the various programming languages reflects the author's wish for compatibility. Prior to advent of the Introcommunication did not support a worldwide trend; therefore, the need for distributing scaling, that is remote applications depending on the scarce resources.
 Logs: The author risk is, viewable in the Event Viewer. The author displays error messages to the use, the .NET Framework determines the detail, and the localhost address offers in-depth perculiarities.
 Administration processes: These are one-off tasks that the environment demands of the knowledge worker. The tools are available everywhere for achieving the goal. Prior to graphical user interface (GUI), these are command-line responsibility.

Who, what, when, where, why?

The author gives credence to the information source. Whenever it is possible, the author identifies the speaker. If the source is attributable to him, the author rarely explicitly identifies himself

The primary contribution of the author is the word. The author draws upon the word of God and tries to derive meaning.

When

God gives most of His information in a dream, vision or face-to-face. How do people place date? On each day of the week (Genesis 1-2)? Seniority comes first (John 1:27, John 1:30).

The endeavor of the author is to share the word

Deep Learning

Our entirety chiefly pertains to Him.

 Background
- Prophecy and Fulfillment

DateDifference.html is browser computation, built on JavaScript. The overall function calls particular functions for determining the days difference in the Biblical and Gregorian Calendar.
DateDifference.asps. is a server-ide. C# ASPART web form.
The Remember's table computed columns are Transact-SQL and SQL-CLR functions.
Our computation is separable to back-end and forward-end code residence; SQL-CLR provides the opportunity to have functionality callable from both parts.
Code re-use sounds good, but it is dependent on many factors.

He addressed time. Each information the author measures is a feature that the author appraises. The features are the words spoken and the events seen.

These are out of context attributes that influence the outcome. Outside the context of managing. Their influence is not determinable.

The author does ASCII code alphabet place summations. There is just not one result, but a set of alternatives; the user may select the most right. For example, AlphabetSequence, produces an index and a scripture reference. The depth in the case of AlphabetSequence is two, with the first result, index, acting as an entry to the second result, scripture reference, is a composition algorithm that includes determining the beginning and ed agan, for the chapter and verse.

Depth of the Probabilistic Modeling Graph

This checks the path to our succession, the thread between concepts. Earlier and recent entries are comparable. The earlier Bible versions serve as a resource for the later versions of the Bible.

Probability

Formerly, the HisWord's table primary key is its Word column, and in SQL Server the maximum size of a unique key is 900 bytes; therefore, the limit of its distinct entries is 900 ^ (2 ^ 8) = 900 ^ 256 = 1.93234983228891510545406872202e+756.

In the BibleOtionary section, the author will consider the word(s) AlphabetSequenceIndex and AlphabetSequenceIndexScriptureReference and AlphabetSequenceIndexScriptureReference correlate. Each word is a feature, however, deten and has a contributing influence on the result.

In the BibleOtion section, the author will look at each word, in the context of the sentence, and see if it is in the BibleOtion section, the author will look at each word, in the context of the sentence, and see if it is in the BibleOtion section, the author will explain the meaning of each word. The degree of belief is most certain; since we display each word found in the Bible dictionaries.

Frequentist Probability

In Get/Page html the same input will produce the same result; because the database is consistent. When the user enters a new word, this trains the system.

WordEngineering started out as the author trying to use the Bible to decipher God's word; however, to do growth, personalization, customization, appeal to more audience. Our task is to see them, say, I done (10th 19:30). Specifications...is done.

Bayesian Probability

Making specific, a generalization; given one result set, can the author make a general result? Does it stand the test of a general audience? Does a sample, qualify for the total?

Random_variable

dex may range between 1 and (8000 * 26), 1...208000; 8000 being the largest length of a SQL Server VARCHAR datatype column, and the count of alphabets being 26. This is a discrete set; since it is finite.

Each sentence will give the same result, and this value is a weighted value of the result set; please note that vowels are probably more popular than consonants, and parts of speech have different frequencies of occurrences.

(Ian Goodfellow, 2016)

Key Terms for Data Types

The Dated column is a valid DateTime, and generally, it is ongoing, rarely does the author backdate

The Alphab uenceIndexScriptureReference is of the scripture reference type, and it is a string

The Testament column is either Old or New.

Ordinal

Key Terms for Rectangular Data

The data storage is a relational database; other options include spreadsheet, comma separated value (CSV), eXtensible mark-up language (XML), JavaScript Object Notation (JSON) file format

The most important predictor columns are the Word, Dated, and ContactID.

Outcome

A row in a spreadsheet is comparable to a database table record.

Software Engineering

Programmer's Workbench (PWB)

This technology will make all the before and current versions of the code accessible, re-viewable, and testable

All the words that the author hears while sleeping are recordable and the author has never had any tendency to alter this utterance from the LORD. When the author is awake and he says something, out of his own volition and pre-meditation, he has massaged this information, but now he rarely does so. The words in the past and future event dates are useful for remembrance entries. As the author technically matures, he automates manual work.

The dreams are re-collect-able, and recordable (<u>humbers 21.6.8</u>):

Web Design Fundamental

The Bible fits man's perception. The author adapts to what he learns

Project Management

The author is querying the Bible database. The first step of work is to store the Biblical text in an electronic medium. The second step of work is to create an application layer that will access this information in a non-proprietary format. The on-going risk is to present as relevant today.

Information Architecture

How will this scriptural text bring new originality? What events of today, follow the text? Page Design

Content Authoring

Linking Strategy

This is what I have done; this is what you will do. What did we understand as His part, what did we understand as our future? To reflect, My correlate. In an anchor, if there is no her attribute or its empty; then the browser should link to the default search engine as its destination and pass its interferst. Alternatively, when the user right clicks on a browser hyperlink, there may be a suggestion option for the search engine to re-direct to a specific web page or to list URIs as in a browser search. Supplementary information for a hard stribution is empty-dated and whois com.

(Jakob Nielsen, 2000)

Web

Cascading Style Sheets (CSS) will offer customization of what the user views by the use of, for example, Media Queries.
 Single-Page Application (S9A) will circumvent the unit of navigation.
 Inform Resource Identifier (IRI) is supportable by other means of specifying information, such as Global Positioning System (GPS) Geo-Location.
 Clients such as browsers store information on cookies, local and session storage.

The author presents this dissertation in a hypertext format. The table of content is to the left and it contains focusing anchors and internal links, to the rest of the document which is to the right. The references section contains broadening link ternal documents, which are available on the web. The web applications do not contain internal links. Same Origin are for retrieving scripture reference, Bible word; Cross-Origin Resource Sharing (CORS) are for requesting information from ext

GaldZiag The Bible is separable into parts; these are books, chapters, verses. Dividing a life, according to purpose (<u>Matthew 1:12</u>). 14 Biblical Generations = 14 * 40 * 360 = 201600.

<u>DateDifference asign</u> The AIET Framework, C# and SQL Server support the Common En; the date ranges between 0001-01-01 and 9999-12-31. The date difference will display correctly for the time interval - days, Biblical Calendar, and all the dates after the rotuction of the Gregorian Calendar.

Declarative

Enhancements to JavaScript, such as const and let influence hoisting. So does script literal, strict mode, class. The C# class container model and the optional namespace alias content the author. Cascading Style Sheets (CSS) is modular, and its rules trickle down.

Continuous

Placing the Ago_Offline.htm file in the virtual directory of the web application will shut-down the application, unload the application domain from the server, and stop processing any new incoming requests for the application.

A single batch file, with a single command line, builds the only .dll_information.information.

A single batch file, with a single command line, builds the only .dll_information.informat

The single case is not instally also tasks to the server. The more lecent electric commands as also used in the last lines of the .html files. This means that the browser knows how to show the HTML elements before reaching their origination, and the owners's JavaScript engine will not reference a HTML node before the declaration of its definition.

Set a Database to Single-user Mode

ALTER DATABASE WordEngineering SET SINGLE_USER WITH ROLLBACK IMMEDIATE;

GO ALTER DATABASE WordEngineering SET MULTI_USER;

If the research of the author is a team effort; the additional expense, time and effort, in staged deployments, is justifiable; such as development, test, production phases.

The author will place non-Microsoft DLLs in the virtual directory bin sub-directory, and the author will refer to Microsoft DLLs in the web.config file.

The web.config is generally consistent across deployment, the only variable is the distalases server mane, and when the application and database server exists on the same machine, the connectionStrings may use Data Source=[local);Initial Catalog-master, integrated Security-PSST. This means that the author will explicitly specify the distalases, object owner, and system object and indirectory and filenames is unnecessary and in overfill.

Riss, which catalog-master, integrated Security-PSST. This means that the author will explicitly specify the distalases, object owner, and system object and indirectory and filenames is unnecessary and in overfill.

Riss, which is the market. All distalables interactions goes through one excess point, <u>Pagestromanissal</u>, only this single file needs re-work if there is a distalabase variety chang.

When running a unit of code, for the first time, I will initialize the static variables. The ScriptureSpletremes Pulm will issue a unique quote-of-the-day, every day, and a random quote, every time. The author program uses the release version of jQuery, which is the most up-to-date. The web services, such as, Sefaria conditions, so you do not need one-resist. The code in the third-party libraries, such as, Newtonostics, such as, Sefaria code overweits. The code in the third-party libraries, such as, Newtonostics, such as, Sefaria code overweits.

The application is mostly stateless except for the database read.

Internet Information Server (ISI) PyterFet Transfer Forcod (HTTP) by default runs on port 50, like other web servers, but this is modifiable.

Using the current architecture, the author takes care of concurrency and deallocks; because database writer sur

To reduce database load, the author considers the selection operation - where clause, distinct and top; projection operation - specify the column list, and not use the universal *, for all columns. Rarely does the author join tables, minimizing the work and resultset, in a set-level language.

(DB2 Developer's Guide).

HTML5

Semantic Elements

Non-Semantic Elements

The div and span elements are for rendering block and in-line information. The author uses the div as a container for the ubiquitous result set; which may contain a single or multiple tables. The span is a space for a non-block display

Communication of God

- Audio: God first communicated with me by His Word.
 mit-out sound (MOS): This means of communication may occur when God intends interpretation or translation by a third-party.
 Video: This is the most resourceful use.

What did the Jews used numbers for, as mentioned in the Bible?

- Time: Creation...end time, period of life, marriage, worship, occupation, anniversary, prophecy and fulfillment, schedule

 *Bable: lone language and of one speech (<u>Genesia 11:1. Genesia 11:2</u>)

 *Withness: Two or three (<u>Destencency 17:5. Destencency 19:15. Matthew 18:16, 2 Corinthians 13:1, 1 Timothy 5:19, Hebrews 10:28, Revelation 11:3</u>)

 *No man could number (<u>Berelation 7:9. Matthew 10:30. Luke 12:7</u>)

How are names issued Biblically?

- God initial naming such as, Adam, Ishmael, Isaac, John the Baptist, Jesus (<u>Genesis 5:2. Genesis 16:11, Genesis 17:19, Luke 1:13, Isaiah 7:14, Matthew 1:23</u>)
 God name changes such as, Abram to Abraham, Sarai to Sarah, Jacob to Israel (<u>Genesis 17:15, Genesis 37:15, Genesis 32:28, Genesis 35:10</u>)
 Family naming, such as, Eve, Cain, Serk (Genesis 21:26, Genesis 41:25)

|------------------------------------|---|--|
| Wake-up orientation database table | This information is currently being interpreted textually. An image, and even more so, a video of the changes in position and direction when sleeping will offer better insight. For the visually implied, the less bandwidth-intensive text may still be satisfactory. | |
| Non-Alphabetic | AlphabetSequence may not be appropriate for people that use glyphs or sign languages. | |
| Structured query language (SQL) | The proposed changes which will offer query customization? The author transitioned from a multi-column query to a single-line query which has a tendency to return more results because it is not particular. Context fine-tuning is a suggestion. With search-engine queries, the author proposes a query-language. This potentially affords better resultset granularity restriction, arrangement option, and maturity of use compensation. | |

Data Science A Hands-On Introduction

This research largely deals with structured data that is put into a relational database. The word is easily associable with a table. The dated column is when the word occurs. The scripture reference column is the guide to the Bible. The columns contain numerical and categories data. The numbers are the sequence and date columns. The columns contain numerical and categories data. The numbers are the sequence and other columns. It was a contain the contained that the columns are contained to the columns and the contained and the columns are contained to the columns are columns. It was a contained to the columns are contained to the columns are columns.

How does the work of the author accompany the Bible?

The Terminology of Machine Learning in Relation to AlphabetSequence Term Training dataset or training set Example (or data point, data instance, sample) Each database row or record. Predict Label (or target) The corresponding Bible text. Linearity assumption The features alphabet places. Since the word is the only feature, it is the only influence. A starting value.

(Dive into Deep Learning)

Object Oriented Programming - GetAPage.html

A type of us; is a kind of us? GetAPage.html is Bible specific.

Parent Scripts and Objects

GetAPage.html contains the HTML5 directive, head, and body sections. The head section contains the title and meta tags for search-engine optimization (SEO). The 3 languages that make up a web page are in the following ascending order: CSS, HTML, JawScript.

HTML is an dement's nodes. There are only single instances of the input and submit elements. There are multiple div containers for the result sets. Although HTML supports attributes, the ID attribute is the author's only general declaration. Both CSS and JawScript act on HTML Logs. JawaScript and CSS reduce the contexts of HTML.

There are multiple uses of global variables. The author disconges this, precursor of encopsitation and debugging traceability and granularity.

(Adam Kelleher).

Bias? Being the other?

(Adam Kelleher).

Search engine optimization (SEO)

It is only recently that the author has become aware of HTML composition

| Element | Commentary | |
|------------------------------|---|--|
| Title tag | The maximum length of the title tag is 60 characters and it is shown on the browser's title bar or page's tab. | |
| Meta Description tag | This may be upto 155 characters and it indicates the page's content. | |
| Meta tags | The other meta names include keywords, robots and author. | |
| Heading tags | H1H6 with H1 being the most important. | |
| Textual content | Search engines predominantly optimize for text. Other media are larger in size and duration. When did He gramise generational growth (Palms 22:30, Genesis 3:15, Genesis 12:7. Genesis 13:15, Genesis 13:15, Genesis 13:15, Genesis 15:13, Genesis 17:8, Genesis 17:8, Genesis 24:7. Genesis 26:3-4, Isalah 53:10,)? | |
| Alt attribute on the img tag | Visually impaired people have difficulty comprehending images. | |
| Fully qualified links | Relative links meet the author's requirement, since is hostable on external sites. | |
| Sitemaps (both XML and HTML) | A sitemap documents the files and their relationships. | |

(Bruce Clay)

Reading improvement? The literature review and bibliography sections are scanty and brief. The justification of the author is that in the Internet age the references and content are available on-line, and putting into words other people's work is not the author's core strength. When the author recounts non-original thoughts, the author mentions this.

Results and Discussion

The information in the Bible, written, thousands of years ago, is true and applicable, today; the words heard by the author is consistent and it correlates with the Biblical theme. It was Me. I was telling you.

This research does not limit itself to a particular Bible subject nor word. But, rather it illustrates the response of the author to the word of God. What artifact can the author produce; in compliance with the word of God? Is the training of the author beneficiary or lacking? Biblical phesistend training and profession; begins at the ages of 25 and 30, respectively. What does God choose a subject. (bibl. 15:15.1)?

The author is working on variations of AlphabelSequence: These are not suitable for general use. These are main's exposition of God's word. These are positional.

- 2-Words: <u>Mv Condemn</u> The first word is the BookID; the second word is the VerseID.
 3-Words: <u>Who is your manager? Crazy mister Martin. Mister Martin as a good.</u> The first word is the BookID; the second word is the ChapterID; and the third word is the VerseID.
- Biblical numbers for calculation.
 Biblical separation into Testaments, books, chapters and verses for referencing

Biblical generation - 40 Biblical years

- 2007...2008 Common Era the author is 40 years old: the author mentions time.
 2021...2024 Common Era the biological mother of the author is 80 years old: the word recorded by the author is time relevance specific

- Pre-condition (Genesis 3:15)
 Assertion (Hebrews 5:8, John 20:17)
 Post-condition (Genesis 49:9, Revelations

 Reversely 1:15 | Genesis 49:9 | Revelations | Genesis 49:9 | G ion 5:5)

2024-11-13T19:12:00 Translation

- 1. 2024-11-13T19:16:00 Textual Basis: The author chose to find meaning to the word of God... with lesser emphasis on his personal subjective commentary.

 2. 2024-11-13T21:17:00 Formal equivalence (word-for-word) versus (VS) Functional dynamic equivalence (thought-for-thought): <u>BibleWord.html</u> is the former.

 3. 2024-11-15T14:06:00 Translator: <u>The author's first program is translation of English to Yoruba</u>.
- (Tim Wildsmith, 2024).

1. ... webpassets.org In the head element, the Cascading Style Sheets (CSS) were the only initial blocker to page requests, and there were no synchronous scripts. In the footer element, the document was last modified and copyright elements were the only client-side generations.

(Steve Souders, 2016-02-10).

Software Engineer versus (VS) Database Administrator

| Keyword | Software Engineer | Database Administrator |
|--|--|--|
| Programming language | Instruction set: keyword, syntax, Application Programming Interface (API) | Structured Query Language (SQL) a data sublanguage |
| Focus language | Predominantly English | American Standard Code for Information Interchange (ASCII)Unicode culture |
| Time frame | Development life cycle - limited by budget. Deprecated code. Automated Jobs and events. How much data are we working with? What is the longevity? Asynchronous multitasking | Eternal - periodic operational cost. Expired data? Scheduled tasks and activities? Backup, housekeeping, sending e-mail, creating files and additional space. |
| Remember human versus reference identities? For example, Bible word versus (VS) scripture reference | Context-sensitive help | Auto-completion |
| Location | Read only memory (ROM), Random Access Memory (RAM), hard disk paging. Github.com version control. E-mail body, attachment. Internet front-end files (.html, .jscss). | Hard disk. Transaction log, backup files. Back-end data is accessible via web services. Separated into records and columns, tables, views, indexes, stored procedures, user-defined functions. |
| Threat? For example, virus | Memory, program file | Data file |
| Customization standard | Strict | Flexible |
| Law versus (VS) traditional practice | Sacrifice | Mercy |
| Compatibility | Legacy? Backward compatiblere-engineering. New, creativity. Framework. | Progressive |

(Itzik Ben-Gan, 2023-07-03).
Solability: The users have various options for sizing up their work. The author did not initially restrict the size of the data queried from the server; therefore, there was information overload on the data grid of the client. The tolerance for large data may be exacerbated vertically and/or horizontally. There may be a high count of rows or columns, thereby, demanding ranking and preferences for positioning.

Codd's 12 rules

Custing on the Word.

Rule 0: The foundation rule: Since 2002, the author has adopted the relational model for storing his data. The author structures his data by using the Structured Query Language (SQL).

Rule 1: The information rule: The physical store is the HistWord Date's Word Column. This information is later processed logically in the HistWord_View.
2024-06-15712:18-00 White is beraining to take data?

Prior to this word coming, I uploaded the 3 file formats of the dissertation files (J.hmi, Lst., pdf) from the Windows operating system computer to the UNIX operating system computer Linux variety. I also read the counter-style of each file.
2024-06-16716:310-010 [a_htho___texthaps___mx_sopod?

Rule 3: Systematic extrement of rule values:

2024-06-18712:1990 (bibliosin or inalonocistate.

- Describe they excurses used data are part of a primary key comnot be rull

Rule 4: Dynamic online catalog based on the relational mode!

INFORMATION_SCHEMA offers medadata, and it is questioned via SQL.

Rule 5: The comprehensive data subleguage rule:
2024-06-20718:39-00 (Blocks at the data as a whole,

Structured Query Language (SQL) sublanguage

Structured Query Language (SQL) sublanguage

| Sublanguage | Command | Usage | |
|---------------------------------------|--|--|--|
| Data query language (DQL) | Select | Is the most popular and non-risky. Except it may affect performance and bandwidth load consumption. | |
| Data definition language (DDL) | Create or alter or drop schema objects | he create statement is used once for each new object. The alter statement is mainly for an existing object. | |
| Data manipulation language (DML) | Insert, Update, Delete, Truncate | Manipulation may fall in the following cases: Primary key or unique index duplication. A primary key column may not be null. Invalid dashappe or extra large data size or out-of-range Constraint nule violation - entity, foreign key. The author rarely impose constraints, like for example in DatedFrom versus (VS) DatedUntil, which may result in negative date differences. The Max database will bruncate extra data, but SQL Server primary key indexes impose a size limit of 900 bytes. Wherease VMRCHMR/MAX) is typically 8000 bytes. | |
| Data control language (DCL) | Grant, Deny, Revoke | | |
| Transaction control language (TCL) | Begin, Commit, Rollback transaction | | |

Rule 6: The view updating rule:

Rule 6: The view updating rule:
Only computed columns cannot be updated.
Rule 7: A single operation must support select, insert, update, and delete:
A base or derived relationship should comply with an operation to select, insert, update, and delete.
Rule 8: Physical data independence:
Batch and end-user operations are not impaired when changes are made to physical storage or access method.
20:40-65-22115-130.0...2024-66-22715-15:00 There is no deterioration in data... when there is a restore, import, or bulk copy.
20:40-67-22715-36:00 Walter and of yourself... 06: Gleien as My Challenge.

2024-06-221 T-00-00
Rule 9: Logical data independence:
2024-06-22117-02:00 The opinion of someone else...
Rule 10: Integrity independence:
The author is not implementing constraints.

The author is not implementing constraints.

Rule 11: Distribution independence:
The user is not aware that the data and log are in separate files. Replication and mirroring are other means of ensuring redundancies.

Rule 12: The nonsubversion rule:
Row processing such as cursor must abide by integrity rules and constraints like set processing.

Concept: GetAPage.html

Join Leg Account Separation

J. Ben-Raicing J. Buser neters a received word, and there is a set of tabular responses.

Purnctional: This is a Single Page Application (SPA) that depends on ABX, and it calls multiple web-services.

J. Belaviorial: There are associations between the word and the Bible and the dictionaries' object-criented classes and entities.

A Independent: This is a composite of previous stand-abore work.

J. Purpouve: Based on user input, the system retrieves data, while all allowing further queries.

R. Reasable: The does is to retrieve information from as et of sources and send the results to various destinations.

J. Valuable: The data is free, and the work is non-complex.

(Daniel Jackson, 2024-01-08).

What did He dispose of in making man (Genesis 2:7, Genesis 6:3)?

(Matt Chanoff, Merrick Furst, Daniel Sabbah, Mark Wegman, Arvind Krishna, 2023-11-07).

 Background
- Prophecy and Fulfillment

(Jack Hyman, March 2024). Time for?

- Birth (<u>Acts 7:20</u>.)
 Family (<u>Acts 5:31</u>.)
 People (<u>Hebrews 3:9</u>.)

Allowing a person the entirety of time

- Initially, the author's strength lay in the database. The author parsed XML data in datasets, datatables, datarows. The author's familiarization with JavaScript meant client-side work.
 What I am oped at defonin_um what the is good at making (cliented 4132-57, Genesis 11:1:2, Genesis 4:26.).
 Derivation...variety: Processing of a word spoken by God to the author is initiated by GeldAppe_thml.
 GetAppe_thml makes used in the client of the control of the

O ti di computer

- To calculate the AlphabetSequenceIndex the attempts by hand may suffice
 BibleWord may not be deductible until ignoring the parts of speech
 Date difference difficulty lengthens between the biblical and the Gregorian calendar

Microsoft SQL Server Management Studio: data entry

You could say, this is what I do... Why I do it?

- I have had to balance migrating to an Internet interface via using Azure Data Studio, or continuing using the faster, stable, Microsoft proprietary SQL Server Management Studio.
 Where are the differences...companion?
 Experimentals, use the same?

Influence

- Delical data is hosted locally and accessible via the Internet by linking to web addresses or placing web service requests.
 For over 2 decades, the author has continuously received word that he constantly records and queries. Sticulates?
 Is there a restrict need for new data? The Bible is complete, but do we have to find new ways of using 87 is there a divergence or supplement? How do we explain and analyze?
 Language translation
 Familiarity with the subject and tradition. Apply domain knowledge.
 Pathurity and relevance to our time
 Construction of the supplement o

(Andrew Glassner, 2021).

This data...where does it exist?

Legacy storage of some data types is unnecessary, since this data is computable. For example, concordances are automatically determinable. Dictionaries that contain the meaning of words are available on-line. Computers provide up-to-date versions and

- translations.

 Two-to-display the data? After determining the AlphabetSequenceIndesScriptureReference the author currently retrieves and displays in particular the King James Version (KIV) Bible text, and the author provides a hyperlink to a scripture reference page for displaying other Bible versions. This practice follows Google's display of a Wikipedia's sidebar and providing a hyperlink to the particular Wikipedia urt. For Bible Interacts, this regurgitation may be redundant. What programming skills are in demand?
- I. Issuing a SQL select, and using a cursor to loop through a tabular or variable output, and building an HTML fragment
 S. Simply creating a HTML anchor to a source url
 S. Fetching, paring, and building the results of a web service

Our comparing our trade (1 Samuel 25). To be conformable of age.

Talent and reward?

- What is the cost of entry? There is no monetary investment. The author started when he was unemployed.
 What is the skill-set? To do manually? The order of alphabets is the literacy competency level. To know how to spell words is also useful.
- What opinion of the same do I have?

Calendar - evening and morning, sun and moon, Passover
 Order of birth - genealogy, leadership - blessing, allotment

Word direction

- When I hear a word: I try to connect to occurrences
 When I read a word: I try to put it into my own words
 When I recall a word: Separated alike joined together (<u>loshua 1:8</u>.)

- Flat files (.html and .xml): Reasoning
 Database: Word from God
 Software: Automation of work

Laws of Communication

- The Law of Credibility:

Ishmael and Isaac

In Lard to Cestumy.

1. HisWord table Word Column: As much as God spoke it

2. Period of Time tables: With respect to time
3. BibleWord table and GetVilege Afrin BibleWord section: King James Version (KIV) dependant

4. GetArage_html HisWord section: Time Variant
For a period of Itime, we are as ay we have mey area? What needs a success. (Genesis 4:2. Matthew 14:8. Mark 6:25.)?

Considering processing and storing

- Computers consist of microprocessors and memory. A memory is either:
 Read only memory (ROM)
 Random access memory (RAM)
 Hard disk
 Object-orientation combines code with data.

What mentions the name?

- Variable and relative? Time, number (<u>Genesis 1:1, Genesis 1:16, Genesis 2:2-3, Genesis 2:16-17.</u>)
 Constant? Name (<u>Genesis 2:19-23, Exodus 3:14.</u>).

Expendable Data

AlphabetSequence concerns include:

- How essential are we; to the personification of God?
 The spirit man holds

- Ine sport man noids
 Syben did the exhapse, His view as ours (Genesis 18:19)?
 How are we acceptable; to what is new? How does God, build up, to His word (1 Samuel 9:15-17)?
 Copyright violation: Not giving credit to the original speaker
 Separating the word from the deed

- 5. Copyright violation: Not giving credit to the original speaker
 6. Separating the word from the deep dear feeting
 7. The grammar needs refining
 8. Name spelling, for example, Playna versus Brian
 9. Non-figlish alphabets
 11. Soundee, this as what I heard; this is the interpretation; such as, this versus these, has versus as, there versus their
 12. Inference, such as, aphreviation
 13. Differences in Bible verses; (<u>Nathewa 27.15, Arts 8.77, Arts 8</u>

- To complete the life of pleasing God, as I chose men.
 Hearing and spelling the word... and not swayed... by the grammatical correctness...

2017-03-06T00:00:00 A Comparance of Age

Divided as separated. Go this way, that way,

I want to program, but I don't want to match two programs together, except for deep thought.

I want to program, but I don't want to match two programs together, except for deep thought.

See when God grams increase; such as in creation, when God counts the days, and separates it into evening and morning. Increase wersus decrease were first explicitly mentioned during Noah's flood. These differences in size we can associate with signs
an and the moon. During the day, you need the sun for your activities; during the evening, it is not necessary. Racher's prayer, and naming of Joseph's dreams and interpretations. These counting is explicit, before Exodus, such as, the 10 plagues of Egenesis 37:5-11. Genesis 30:24. Genesis 40:41.)

12(2) If it is provided in the province of the province of

Marriage

Marriage is not a practice, in the life after, resurrection (Matthew 22:30. Mark 12:25. Luke 20:35. Revelation 21:2. 2 Corinthians 11:2.). Co-incidentally, the disciple, who Jesus love, John the apostle, does not mention this event, in the Gospel of John. It is one of a father that wants vog. Jesus resurrected, after these days (Matthew 12:40. Matthew 26:61. Matthew 27:60. Matthew 27:63. Mark 8:31. Mark 14:58. Mark 15:29. Luke 2:46. John 2:19. John 2:20. 2 Corinthians 11:2. Revelation 21:2. Very expectation 2:10. The revelation 2:10. Mark 14:58. Mark 15:29. Luke 2:46. John 2:19. John 2:20. 2 Corinthians 11:2. Revelation 2:12. Revelation 2:12. On the client, HTML is content, CSS is presentation, and JavaScript is behavior. Both ASSY and ASSYX are server-side logic.

The application tier is in a dynamic link library (DL1), and it is separable into client, database, and application logics, but with the advent of language integrated query (Linq), this delineation is slowly diminishing. Linq rivals previous division of labor.

The database consists of tables, verse, indexes, constraints, stored procedures and functions. These programming logic may be SQL or SQLCLR. SQL critics complain that while the rest of software development have progressed, we still use an archaic language;

Visibility (John 4)

The client is accessible from the browser, both the user interface and the source code, along with the errors and exceptions. The interface is made-up of request and response. Text-to-Speech will aid the people with poor visibility. The client handles the human imputer interface (HCI). The Bibb versions are selectable options in HTML or JavaScript. The distables contains the real information, that makes-up the result set. Lifecycle (John 3:3, John 3:7)

. In computing, we have had mainframes and terminals, client/server, Internet, mobile and now cloud. The trend has been from proprietary to open architecture.

Accompany (Matthew 4:6, Matthew 18:10)

To each resemblance

What are the pairing?
The client started as HTML, but now has JavaScript and CSS.
CG originally served the back-end. Flash and plug-ins have made way for other technology, such as HTML5 video and canvas.
JSON and XML have made in-roads.

- Where His word, expected mine? When I get a word from God I could do the following?
 Write the word in my notepad, and never refer to it again.
 Record the word in the WordEngineering database, HisWord table, word column, and associate the accompanying columns.
 Roococc an artifact based on the word.

- 1. Moses? Prophet (Exodus 4:10-16. Numbers 12:6-8, Deuteronomy 18:15.).
 2. Abraham? Seed (Genesis 17:5, Genesis 15:2, Genesis 22:2, Genesis 22:12-18, Hebrews 11:17-19.).

The drawback of the relational approach?

- Centralized versus (VS) distributed storage?
 Unique foreign key? Master-child? Hierarchical?
 Duplicable

- 3. Duplicable
 4. Maintainability
 5. Expertise and familiarity? Isolated.
 6. Spontaneous versus (VS) latency? What to place in the database, what to extract from R?
 7. When is Capacity...bill encount?
 1. Databases may reside inside multiple files.
 2. Although databases may store different file types. This wasn't the original intention.
 3. Databases are abstractions.

Lacking expertise?

- Usability: The author has limited experience with building a user-interface (UI) with Cascading Style Sheets (CSS).
 Quality Assurance (QA): Some changes break existing code.
 Database nectrality: The database edirfilition language (DDL) and embedded SQL are not portable across all databases. For example, SQLCLR, is in use.
 Adoption by emerging technology? Mobile, cloud...

What substitution...we have ahead? Post Resurrection Pre Resurrection Scripture Reference Tree of life Book of life Father's name 1 John 2:18, 1 John 2:22, 1 John 4:3, 2 John 1:7, John 5:43 Antichrist

What did He find... as useful

| id He findas useful (Matthew 21:42, Mark | 12:10, Luke 20:17)? | |

Accessibility to name?

1. The first and only word spoken to me in the United States of America (USA) prior to my deportation is, I Am taking you on a journey. The first word spoken to me upon my return to the United States as I prepared to go to a christening in Los Angeles (LA) was Ille eyan mil on lo yi. Translated it is my person's house you are going to. Location, movement, matters to God. The first word is in English, the colonized language. The second word is in Yoruba, my native language. Where is the expectation of good? Times are expectations.

Where will I be of the same?

| Word | Scripture Reference |
|-------------------|---|
| Burial place | Ecclesiastes 7:2, Genesis 23:20, Genesis 49:30, Genesis 50:13 |
| Birth place | Matthew 2:6 |
| Matriach's origin | Genesis 25:20, Genesis 28 |

(Charles M. Kozierok).

With anxw web services, the author, standardized on JSON for returning data. The alternative is XML. The preference for JSON, is because of its lighter payload. Another difference, in the result set, the author chooses if to return a dataset, datable, or scr
for datable is useful for a singular resultset. With SQL Query select statements, the column list may refer to *, for returning all the columns, in the order they are arranged in the container, table or view; or otherwise the stricter, specification of each column return. The author restricts which rows to return, by issuing the conditional where clause; the top 1 select clause is useful, for quote of the day; as it supercedes the set rowcount 1, limitation. The author depends on the database order by clause, for sorting in ascending or descending order, Data is also rankable by clicking on the table's column header.

The author's SQL Server TCP/IP is turned off; because the author does not want interference from the outside. The author imposes an artificial Simplex Operation; only supporting external read requests, and not allowing updates; which is a one-way traffic of data from the server to the clients. The other options are Half-Duplex Operation and Full-Duplex Operation.

Quality of Service (QoS)

Most of the author's web pages transmit textual data; but a few pages offer text-to-speech or video capabilities; these rare application rely on high-grade speciality. The author as a programmer does not meddle with these intricacles; the technology provises care of the nitty-grity.

Parameter Standardization

The column name is kept consistent in the query string, up-to the naming convention and the case-sensitivity; this also applies to where we specifically refer to a column name in JavaScript. This is most seen, in the Scripture reference and Bible word variate which the author shares around.

Global Resource Allocation and Identifier Uniqueness

The domain name is unique to the organization; and the Javascript code for AJAX explicitly mentions the virtual directory; the internet provider issues the IP address.

HisWord table nullable columns

All of the columns in the HisWord table are either system generable (HisWordID, Dated) or nullable (1 Samuel 3:19)

Productivity

- 1. Productivity is the measure of unit tasks completed within a time frame or at a cost.

 2. A project cost is its work hours. A work day is 8 hours. A work month is =176 work hours. A work year is =2000 work hours.

 3. The degree of conceptual complexity increases when an expression contains various function calls and many parentheses. Scope complexity is the fitting between parts.

 4. To predict productivity? Re-use.

 5. Metric:
- - tric:
 Executable Size Metric: Is the code largeness. It does not fully consider the uninitialized array data. It includes library code which reduces complexity. It is not a language-independent source. It is not CPU-independent.
 Machine Instructions Metric: This is the size or count of the machine instructions.
 Lines of Code Metric (IOC): It counts the number of source code lines. It is consistent across programming languages. It is CPU-independent. The Linux word count, wc, command will suffice.
 Statement Court Metric: It excludes comments, blank lines, and counts as 1 a statement that spreads across multiple lines.
 Statement Court Metric: It excludes comments, blank lines, and counts as 1 a statement that spreads across multiple lines.
 Function Port Analysis (FRPA): It looks abend and assumes the amount of work a program will require. It details the inputs, outputs and basic computation. FPA has become a postmortem (end-of-project) tool.
 McCabe's Cyclomatic Complexity Metric developed by Thomas McCabe: It finds out the complexity by determining the paths through It.

(DeLean Tolbert Smith).

| | Brainstorming |
|---------------------------|--|
| Strategy | Description |
| Focus on quantity | AlphabetSequence includes the whole Bible. The author has not expanded the 2-words nor 3-words computation. |
| Wait to judge | AlphabetSequence is relevant to the English language and the King James Version (KJV) Bible? |
| Think outside the box | While the initial focus was on the Bible, written word; research now includes spoken word. |
| Combine and improve ideas | The author solicits input from others. |
| Keep focus on the problem | Database recording resulted from the effort to determine when? The author has concentrated on this timeline. |
| Set a time limit | Elaborious work is avoided. |

Design Selection

- Agility: Ease and speed
 Flexibility: Adaptation to changes
 Component: Encapsulation

Ease of Manufacturing

Large number of independent parts: Team or solo development
 Parts accessibility: Build versus (VS) buy

(DeLean Tolbert Smith).

Decision-screening Matrix

The AJAX approach offers the following benefits in performance criterion and weight:

- Ease of manufacture
 Engineering skill needed to build
 Robust design
 Primary function independence

The competing solution will include:

- Server-side JavaScript, for example, Node
 Front-end library and framework, for example, React

Progress

After the author conceived the notion for AlphabetSequence, he stored the word spoken into XML flies, along with manually determining the relevant Bible word. This, the author did, because the author thought and felt that the readers will prefer to read the cent information, and they do not have to regurgitate the entire distabase. The author was siving at Neward, and working from Fremont. The author corocide, the FrontIntal Time Span, explicitly into the Remember's table commentary column. Now, there are three computed columns, managing this period(s); these are the days difference, the Biblical time period, and Common Era computation. earther is saving memory storage space this way, And, also offering the opportunity to other people, the possibility to calculate their preferred period.

Using the Knowledge learnt from horizontal replication and partition, the audience are no longer forced to accept the author's calendar. The audience can choose their exceptable fact, and ginore nor standard derivation.

The history, this way, is to say; at the begining, the author will record every entry after six p.m. as the next day saying, just like the Jewish day starts at 6 p.m. With the reasoning advent, the Tanakh, the New Testament, and the Koran, the truth partiality, is reversance.

The Basic of Facilitating the Truth

Most words have precedence, and do not exist in an emptiness. Words follow a trend. Are their supportive collaboration, to the utterance the author hears; these are linkable for historical evidence.

How do we give our actualities? I have found written text, the easiest and most applicable way of sharing thoughts. Words spoken, when passed from generation to generation, may gain legient status, and therefore, lose appropriateness.

Examine the course of history? You will find, that most truth, are actually reading the deram. In my case, when I try to recall, the past, I search by keywords, numbers and dates. So, entries in the word, are most to realization. The first words spoken have higher importance and closer affinity; so also, propriet application, have standard occurrence.

Our work, so much depends on date entry. The Remembers table reliable on reliaboration, ideductive reasoning.

Can we look back at history, as we precede our future

An angel said to prophet Daniel, many shall run to and fro (Daniel%2012:4)

Is this phenomenal traceable, Biblically, and can we name a person that bears similar resemblance? When we study, king David, we can see that David fled from king Saul, his predecessor; and two of his biological immediate sons, who purported, to overthrow him as king. In the Book of Revelation, the only three mentions of king David, talk of movement (<u>Revelation 3:7. Revelation 22:16</u>). Joseph (<u>Genesis 37:9. Genesis 37:9. Genesis 37:19. Genesis 37:1</u>

Why we Accumulate the Same (Matthew 26:53, Revelation 9:16, Revelation 7:4-8)

Samuel anointed David, during king Saul's reign. The choice, one makes, ahead (Genesis 2:2-3.2 Samuel 11:4.2 Samuel 12:24. Ruth 3:1. Ruth 3:1. Ruth 3:18. Ruth 3:18.). Knew versus lay

Wanting a Member of...

In the first words, in the Bible, God referred to the beginning, of His work, giving time, an annotation. God also mentioned two places, heaven and earth, creation generally centers on the activities on the earth; and God we understand, resides in the heaven, least point for good on earth. To seek a development; it had a beginning.

In the second sentence, second verse, God mentions, that the earth was without form and void; meaning the earth was without content. Nothing was a member of the earth. Also, God's spirit, a member of God, moved across the water. When time is maximal usest; time is ideal allowed. When our association to live; is association to the end.

What did He see as His? A remodelling of the last (Daniel 9:24-27, Revelation 3:12, Revelation 21:2, Revelation 2:7, Revelation 2:2, Revelation 22:2, Revelation 22:14.)? The author will wark a conciliation with time?

The author will want a conciliation with time?

AlphabetSequence is a novice attempt to tee what the author hears to the Bible. As one reads the Bible, they have a more familiar method of communicating. As we begin today, how can we let tomorrow?

That is what we are trying to say, how can we make ample use of time? Word of God. Word from God? The commentary is a human interpretation. You can fit more into time, by making a luxury of time. Why do we have to repeat the meaning in our wo Bible dictionary and communicating. As a result of who are we? When does the secanior introduce God (Genesia 3.8). The commentary is a human interpretation. You can fit more into time, by making a luxury of time. Why do we have to repeat the meaning in our wo Bible dictionary and communicating. As we begin today, how can we let tomorrow?

Cross references to related applications

The author has field 2 unscreedful trademark applications. These trademark requests are WordEngineering and www.JesusInTheLamb.com. The first trademark application deals with the use of engineering to decipher the Bible. The second trade efforts for the principle 2, ulsations in the Variable, you shall follow be.

Computer Listing

at https://github.com/KenAdenij. These include the source code and the data definition language (DDL). For size and privacy reasons, the data manipulation language (DML) is not available to the general public. The Bible immentaries are available in the public domain. The author concedes that the length of the source code is large, but it is easily readable.

Technical Field

Seeing the Bible as enlightening to man.

- How useful you have been in determining wisek? How diversification the chances? (Genesis 4.)?

 The Microsoft Windows Operating System offers the clipboard copy command. When using the Mozilla Frefox browser and copying the address bar, the author selectively only copies the domain name and leaves out the protocol when it is http or https. This saves stonges space, since this is the default protocol. When copying information from the page, please note that there may be leading blank spaces, which requires truncation.

 Difficulty level? Our work is divisible into writing the word, commentary, and deducting meaning. When the word is from God, the date entry is easy when it is in English, except when it is in Yoruba, where there may be spelling and substitution errors. The commentary does not have to be easy, dince it is an inferione. Determining the correlation between people, places, and historical information, may require expertise. What I am able to do is how He types me. As I wrote this paragraph, I entered in my own words and I sought assistance from Him. A step to do is never forosten of the LORD. Whose obscurity has the solved?

 What can we be, in the midst of a seedle, pertaining to God (**Matther 19-12.)?

Re-build Jerusalem Sign a covenant with the many

It is firstly, a database work. That is the author records God's word. What the author hears, he relates to the Bible and the other scriptural sources. These information are all in database tables, giving the author the luxury of using relational technology. The benefit includes storage and archive, that is, the work is usable in tabular format. There is a copy of the information running Microsoft SQL Server on a Linux operating system; which the author switches to, by changing the database connection string of one node in the web, config. When the user decides to stabilize and and mit no further changes; then there is no need to deadliform distabase update work. As with such work, the database schema remains consistent, since the beginning. The choice of word, meets today's expectations. The addition of the ActToGod table, demonstrates the maturity of the author, since it advances from data to information.

The author, first wrote his history, in multiple stand-alone files. ATML_XML. (Acts 7.22). This documentation didn't allow for enough dating, to track creation and change, nor easy querying. Therefore, the decision to move to a relational database; that will augment this fact.

 Background
- Prophecy and Fulfillment

Since the beginning, the author wrote a ContactMaintenance aspx server-side page as a user-interface (UI) to record contact information. This page remains active, till today.

The author uses Microsoft SQL Server Management Studio to document general information. When the author is offsite, text editors provides a place to scribble data manipulation language (DML) statements into SQL script files, for later execution. Please understand that both means mentioned above do not always support the checking of spellings nor grammar, and have limited formatting.

I have a product; where is the method?

Adoptability:

- 1. What is the minimum requirement? The author believes it is the Holy Spirit spreading the Word, and it is not him, making up the word. As long as you have the spirit of God, then you are receptive to this information sharing. The word is not always clearly heard, and the sighting is not always 20/20 visible.

 2. What is the Iteracy level requirement? If you know the alphabets arrangements, then you can determine the AlphabetSequenceIndex by hand. To determine the AlphabetSequenceIndexScriptureReference, you need to know, the count of chapters and verses. This manual work gives way to computation, which is not error prone.

 3. The Biblical sociount worde ferams and visions textually, without resorting to the database. Search Engines Crawlers perse the standard HTML files and rarely query the database. The calendar: years, months, days, may benefit from the stipulation and generability of the Common Era.

 4. Where is the world leading and how do we follow R? The author fiddles with the idea of bringing technology to the Word of God. The author is unaware of the start and early beginnings of dictionaries, concordance and commentaries; but the author gains from

- this works as a reference. The widely acception of a work, accompanies preference and prevalence.

 5. The result of the Bible, is how we use it. The emphasises of Jesus Christ and apostle Paul is the word for today? As the author sees from the Bible, Moses assigned intervention to leaders, and Moses went to God as a higher authority. Who is the work for? Who can beneate from resident his work?

Business Analysis Body of Knowledge (BABOK)

Tasks

How to go about it?

The author's original intention was to record God's word. This later led to finding the word's background and implication.

The data input is currently being done manually, but the author looks forward to electronic automation. The identity and date are potential external inputs. The scripture reference requires Bible know

Guidelines and tools

A relational database is a substitute for text processing

I am the primary contributor and beneficiary,

Outputs

Outputs are created, transformed, or changed in state? The constancy of the word is what we have shown.

RACI matrix. RACI is an abbreviation for Responsible, Accountable, Consulted, and Informed

| Accountable | The person that is answerable for the | ne correct completion of the deliverable | rson is accountable for each task or deliverable. | | | |

(Alison Cox).

Database Modeling

Entity-Relationship (ER) Model

Project Manager Business Subject Matter Expert (SME), Technical Personne

Attributes

Identifiers

Previously, the author thought of the word as unique.

In most cases, surrogate keys such as ContactID, HisWordID are pointers to associations.

Normalization results in a master Contact table with multiple details. There is a one-to-many (1:N) relationship

Cardinality

This is the largest number of possible occurrences on one side of a relationship. There can be only one contact for each contact detail

Business Analyst, Technical Personnel Technical Writer

There may be no contact details for a contact.

Strength of Entity

ID-dependent entities

The weak contact details, primary keys include their ContactID.

Design Pattern

| Title | Description | Commentary | Universal Resource Index (URI) |
|-----------------------------|--|--|--------------------------------|
| Accessor Pattern | Get and set an attribute by using a property. | The boundary to a property value. Readonly is achievable by disabling the set method. | |
| Delegation Pattern | Composition substitutes for inheritance. | The author does not inherit any class. But the author delegates by using composition to include existing services. | BibleBook.cs |
| Factory Pattern | Create subclasses from one or more methods. | At runtime, instantiate a variable object. | BallFactory,java |
| Immutable Pattern | An immutable object is unchangeable after creation. | A string object is immutable. Although behind the scenes a string object is a reference type, it is treatable like a value type. A StringBuilder object is changeable. | |
| Marker interface Pattern | The marker interface pattern is empty. It is metadata that refers to additional work. Examples in Java include Cloneable, Remote, Serializable. | A class may implement the cloneable interface to identify support for the clone method, which may perform shallow or deep copy. | BibleBook.java |
| Singleton Pattern | Only a single instance is createable. | At Daigaku Honyaku Center (DHC) there was a database table which is a reference and contains a single record. | SingletonPatternBible, java |

Data quality management

- Data quality standards: The author is importing religious data from trusted sources. The author is following rigorous practice.
 Data quality assessment: The author is reducing human error by automating labor. Once a process is understood, the author computerizes the work.
 Data quality monothring: The work has been on-quing for at least the last 20 years; therefore, there is awareness of the expected results.
 Data quality reporting: There have been spurious cases of data loss, referential integrity violation, corrupt databases, computer breakdown and hard disk not recoverable.
 Data quality issue management: Having data facing the Internet is a risk, so there is password protection, no web access, little metadata.
 Data quality improvement: The author educates about data safety.

Data pipeline tracking: Microsoft SQL Server offers overwhelming statistics. There is information on the duration of backup, restore and other tasks in its maintenance plan, profiler, query plan, logs.
 Data quality assessment: Microsoft .NET limits the timeout between request and response. Data growth is manageable by size or percentage. Schema changes are done via Transact-SQL, which propagate

Unified Modeling Language (UML)

(Unified Modeling Language)

Common Structure

UML composes elements and relationships as in its predecessor Entity-Relationship (ER) diagrams.

A model contains elements which may have descendants for specializations. A contact may have children such as addresses. When a contact is removed, this cascades to the removal of its ch

- A directed relationship may exist between a collection of source and target.

 A namespace is a container separator.

 An import facilitates the admittance of an external namespace.

 Types and multiplicity restrict the units of information. For example, a scripture reference can only identify book tities, chapters and verses. For the King James Version of the Bible, the cardinality of the books is 66. A constraint respects the range of void values that a member may have.

 A dependency replicates changes between the supplier/client.

- Lack of a value is null. A data type may place its own degree of significance on a value. For example integer versus (VS) decimal, date versus (VS) deteime.

 A string is a combination of alphabets, numbers and symbols. For example, as in scripture reference, when it may concatenate Bible book titles, chapters, verses, and separators.

 A licegie is a vince number. For example, BibleReference with consists of Book ID, chapter and verse.

 A Booken is either true or false and it is normally used for validation.

 A real is a number with decimal relevance, such as stidous and percentages.

Classification

tust memore. In the CP language, an abstract class is static, not instantiable. A static class may contain extension methods.

Signals and receptions are similar to events and handlers. A page load or close is an asynchronous signal that its subscribers handle separately. A click event is triggered and resolved internally.

Microsoft. Mes supports components such as a pre-complied dynamic link library. (cit), and compling web forms and web services at first request. Web form matured from code behind to code-beside. For the Java language, there must be a correlation between package and directory names. Microsoft Net does not impose such consistency. But the author abides by this rule.

In C I version 9, a method may offer a coordinar textury logical.

2024-11-05702:41:00 Who's personally... the story2. The word of God is pure, but it is only recorded in the HisWord's table, Word column. Every other place... is man's correlation and hopefully collaboration. 2024-11-05703:05:00 If only one column... What dees' 1 have not? 2024-11-05703:22:00 The detetime column type is useful for backdating. 2024-11-05704:18:00 To delegate the use? 2024-11-05705:13:00 Not looking hinders. but looking forward.

2024-11-03T03:58:00 Requirement: mandatory, significant, optional

1. 2024-11-03T04:26:00 Mandatory: It is absolutely essential that the database be accessible, and at a limit data entry is done, punctually_SQL Server is a service. 2. 2024-11-03T04:52:00 Significant: What you do with so ever? Microsoft SQL Server Management Studio.

Entity-Relationship Model

2024-10-28T05:14:00 What are compatible... within my part?

In looking at the Bible, a decision was made to separate it into 2 parts, the former Old Testament, and the latter New Testament. This offered the Jews the opportunity to retain the Tanakh. This influenced the calendar breaking into B.C. and A.D. The Moslems, disillusioned with the proprietary Bible, got the Koran. 2024-10-28705:45:00 <u>A decision has to be made on your part... to follow the truth.</u> 2024-10-28706:06:00 <u>What inout has He contributed... that should be my output? I initially stored each day's work into separate files. For granularity reasons, I later chose to store each word in its own record.</u>

2024-10-24T06:54:00 We have to accept... we are no.

The 3 private sectors jobs I held in Charlotte, North Carolina (NC) were:

- 1. At Sunhealth Corporation, I upgraded a Microsoft Basic application to add columns to a printed report. Frank Veale worked on a database application for dating.
 2. At Certaril Corporation, I upgraded a Borland Turbo C application to generate an additional tape print label.
 3. At McMery Real Estate, I worked on a Risbase 5000 application.

These 3 non-academic Central Piedmont Community College (CPCC) tutor jobs offered me the opportunity to complement my programming career with writing

2024-10-19T03:08:00 What is suitable... for replacement?

Initially, I registered the trademark, WordEngineering. After offering me a book, Ocean Senior, I afterwards, was issued the domain name, www.JesusInTheLamb.com. (<u>Reyelation 21:27, Reyelation 21:27</u>). At Baynet.com, I learned how to use Microsoft VisusiStudio, and how to develop using dynamic link libraries (DLL). This method I applied at Daipskut Honyaku Center (DNC). I also copied code from ASP.NET Unleashed by Stephen Walthers. These were prior to Microsoft introducing Microsoft. NET Armemorks 3.5 and with It Language Interpreted Query (LUN) and ASP.NET Model-view-controller (MVC), 2024-10-19104/3-70 0M but obtioned the use... to later Inter? With ITML, you have elements and attributes. Choosing... to place alike. I personalize... th change. I use Google to check my terminology, and later correct my grammar. 2024-10-19104/02:00 Begin as a representation. 2024-10-19104/24:00 What will maintain... a... instance of mysel?

2024-10-17T20:41:00 As a result of whom?

- Who is the quote from? Whose words am I reckting? Most words I give the Holy Spirit credit for. But if I recognize the voice, or I heard the person speak, then I record the contact. If this is a word from scripture, then I attribute the reference. 2024-10-1721:38:00 I take the spirits, with a property of the property of the spirits of the person speak, then I record the contact. If this is a word from scripture, then I attribute the reference. 2024-10-1721:38:00 I take the spirits, with a property of the person speak, then I record the contact. | Divided according to the children of Israel | Deuteronomy 32:8 | |

What I use people for (Job 35:6-8)?

- Sin against people.
 Sin against God.

A programmable approach

This I have devoted to...that you may find me useful (Revelation 2:7. Revelation 22:2. Revelation 22:14. Revelation 21:23. Revelation 21:27. Revelation 3:12. Revelation 21:2.)

- The SQL is being built dynamically with the Bible version and the query condition clause customizable.
 The output is in the JSON and HTML format with support for export into the CSV, JSON, XML.
- God said. What are the other activities of God? The spirit of God moved. He saw it was good (Genesis 1.). When one finds good? That is the meaning (Genesis 1:16, Genesis 2:19-20, Genesis 4:1-2, Genesis 4:26.). We demonstrate...how we are. It is not misleading...That is the deception (Revelation 12:10). Appreciate as (Matthew 16:18.)?

What is the supplement?

| Word | Commentary | Scripture Reference |
|----------------------|---|--|
| Greatest Commandment | Love the LORD thy God. Love thy neighbor as thy self. | Matthew 22:36-40, Deuteronomy 6:4-9, Mark 12:28-31 |
| Forerunner | The law and the prophets were until John | Luke 16:16 |

Is this generation the same?

| Word | d Scripture Reference | |

| Adam | The first man will need a companion | Genesis 1:26-31, Genesis 2:6-25 |
| Jesus Christ | Transformation of the spirit | John 3 |

Quality Assurance

- **DABILITY ASSURANCE**

 To achieve performance beneficiary, the author uses AIAX, a single Javascript and CSS file, and minute images.

 The author's work is largely based on the SQL's SELECT statement, a natured declarative language, which the author uses to query God's word.

 The author rise is not the Bible database, a recognized source of information, which has stood the standard of time.

 The reason for Alphabet-Sequence is because the author lacks Biblical knowledge. The author rises way to reconcile what he is hearing with the established in SQL COLUMN, VAIC) and SUM() Functions are row-based.

- Code Analysis: JSHint, ExCop
 Questionaire: RatingRank InDi

Prepared for Time

On 2019-04-04T09:00:00 <u>noter_negwen@ggrom.com</u> will telephone me about the role with Google's co-founder Larry Page jobs.lever.co/kittyhawk.aero/701c5d9a-2d8s-4727-a345-d4a93dddcc277agency.id=388e0b44-7127-4709-ad21-5eb8ea577403 Andn Nguyen alsked how 1 spend my dar?

When I started Aphabed-Sequence, I alter my only daily meal at 6PM, read the Bible and went to bed. I could break my day into punctual scheduled activities, such-as:

in the Remember and APass tables. Where are people, his relation? However, he is present, that is how I use.

- If I have a paper and pencil available, I write down the word, and I calculate the AlphabetSequenceIndex.
 When I have access to the database, I enter and store the record electronically.
 Computer access means the results is retrievable via GetAPage.html.
 Text editor is useful for writing SQL:

God's Word; Human Interpretation

- Cast which fits into the Contact ID column
 Scripture reference is the Biblical theme

pecificity guides our entries into the HisWord table; for example if the information is not explicit, do not record it. This means that the nullable columns may be left empty. When there are more than one possible entries, choose the most rare

What we do minimally, is how we do enormously,
God may put a thought or question in my mind, rather than sharing a word? To know the need of revealing one another?
How do you, reference the Bible?

- ScriptureReference.html Requires Bible knowledge and place in the Bible.
 BibleWord.html Requires word knowledge

- When the author hears a word and there is a reference to a place in the Bible, this affirms the word's relevance to the Scripture.
 Grammatically correctness is also vital.
 If a word correctness with a historical event, then it is credible.
 When the Spirit leads and guides towards an utterance (Matthew 10.19-20).
 Where the Spirit leads and guides towards an utterance (Matthew 10.19-20).

- God rested on the Sabbath day (<u>Luke 23:56</u>)
 Jesus Christ (<u>Daniel 9:24-27, 1 Corinthians 15:45, 1 Corinthians 15:47</u>)
- Man such as King David (2 Kings 14:3, 2 Kings 16:2, 2 Chronicles 28:1, Amos 6:5,)
 Place such as Sodom (Matthew 10:15, Matthew 11:23-24, Mark 6:11, Luke 10:12, Li
 Other living things (Numbers 22:21-33).

To whose advantage am I?

In every scenario, we participate in, our last outcome should be holy (2 Samuel 12:14). Future study, may consider the actors in the Bible, and award their holiness in each scenario.

This is our attempt to find follow-up, continuity in the Bible. A brief repetition of our activities, subsequently. Firmer consequence (Isaiah 23:17, Israeliah 23:17, Israeliah 25:11, Israeliah 25:12, Israeliah 25:10, Daniel 9:2, Zechariah 7:5.). Listed below are so of the repeated reinforcements.

Samson's Birth (Judges 13)

An angel of the LORD appears to the wife of Manoah and prophesy that she will give birth to a Nazarite son (<u>Judges 13:2-5.</u>). The same angel appears to Manoah and his wife (<u>Judges 13:6-25.</u>). The angel reinforces the their responsibility and defers rev

The Birth of the Messiah (<u>Luke 1</u>)

Foretelling the birth of John the Baptist (Luke 1:5-25. Malachi 4:5.). Transitioning the present to the after (Luke 1:17.). Foretelling the birth of Jesus Christ (Luke 1:26-38.). Continuing the Davidic line (Luke 1:32-33. 2 Samuel 7:12-13. 2 Samuel 7:16.).

The Baptism of Cornelius (Acts 10)

The Bible does not explicitly mention the citizenship of Cornelius, but it mentions his rank as a centurion in the Italian band (https://doi.org/10.11/2.2.27/2.001/2.1.
Simon Peter is a fisherman, but without the LORD's presence, fishery is not sustaining (https://doi.org/10.11/2.2.27/2.001/2.1.

Full Position

The first occurrence of the word, full, in the Bible, occurs in (genesis:15:10; and is in reference to the vale of Siddim, which was full of slime pits, and this is where the kings of Sodom and Gomorrah fled, and fell. The father of the faithful, Abraham, died, full of years, and the son of promise, Isaac, died, full of days (genesis:25:8.Genesis:25:29; The last occurrence of the word, full, in the Bible, occurs in (genesis:25:8.Genesis:25:8.Genesis:25:8.Genesis:25:29; The last occurrence of the word, full, in the Bible, occurs in (<a href="mailto:genesis:25:8.genes

One Chance; Seem the Rest.

Our LDRD's prayer is a communal prayer; directed to the one God (<u>Matthew 6:9-13. Like 11:2-4</u>). Please note that it is Jesus; teaching this prayer; so He doesn't refer to Himself or the Holy Spirit explicitly; as in another passage, when He me as the bread (<u>Jahn 6:31-33</u>), He explains the truth; that we may fall short of it, by explicitly referring to the Father. He is alluding to the events in the apocalyptic books, Daniel and Revelation. We are on earth, and we have an earthly father; whee wee, we wish and will to reside (<u>Hather 6:9.1.ide 11:7. Daniel 2. Revelation 5.</u>). When no matter, where 1 go; this is how, I Am Tound (<u>Jahn 20:17.</u>).

To set everything true

The word, trug, occurs in seventy-serve verses in the Scripture Bible, and there are eighty-one occurrences. True, first occurs in losephis interaction with his brothers (Genesia 42:11. Genesia 42:13. Genesia 42:13.

To Whom Masculine?

During Creation, God asked all living things, be fruitful and multiply; God asked Adam to name the living creatures, and God required Adam to take care of the Garden of Eden, but this taking care is to dress and keep the garden; there is a role for man, the tree of the knowledge of good and evel, and the tree of Iffe. God did not specify the welfare of animals. Out of Adam, God made a helper for Adam, Eve.
After the Fall of Ran, Adam's Is but not like therough; and there is exemity between the seperate and every, and each other seed, and few will have pain, during child-birth.
God made costs of skins, and dothed them; it is our presumption, that the clothing is from living things, personally precised as an is accritical animals(s), to since this clothing is not specified, an alternative, is that it is a plant, or another creature entirely.
God orated an adult male, Adam's and is female countering. T.(14). But is 5.1. There is no mention of Adam's schiller the fall or main; as the bears and name their children; Adam's earlier effort, which was to cater for the Garden of

We can only suggest, that the struggle between good and evil, continues upon the birth of Cain, Abel, and Seth. Eve named Cain, as her possession; and Seth, as the appointed seed.
God instituted male circumcision, which should take place on the eighth day, as man's responsibility in keeping the Abrahamic covenant.
At time, where is proclamation of a mantle, before inveltions; as in the case of Ishmael, Issaec, Jacob, Samson, John the Baptist, and Jesus Christ. In each example, there is a relationship between God and a parent; and God is directing, the offspring's onus. The
nt similar to Christ; is to see yourself, among fuld.

Historical man's profession are keeper of sheep, a tiller of the ground, handle the harp and organ, an instructor of every artificer in brass and iron. Unlike the first men, in the Bible, Seth's service was not identified, we only know that after the birth of Seth's son, Ence, men began to call, on the name of the LOED.

The 1D Commandments details the relationship we sapire to have with God, and our fellow-men.
God may consign men to overseer, as in the case of Melchizedek king of Salem, the priest of the most high God, and collector of tithes; Joseph, dreamer and interpreter, and he will save much life, in Egypt; as in incorporating the end. We share among us; as no foundation separates us.

Our choice is where we want to be? What we want to be?

A choice between what you have, and what you will want? (Revelation 5:5. Matthew 1:25. Luke 2:7. Romans 8:29. Colossians 1:15. Colossians 1:18. Hebrews 11:28. Hebrews 12:23.). Where I take you; is where you belong (Genesis 13:14-18. Deuteronomy 24.).

- What is the repository? If the user only needs to store the Word from God, a text file is sufficient? A comma-separated value (CSV) may suffice for multiple columns AlphabetSequence considers the whole word. Separate words into?
- 1. Buzz word
- Keyword
 Parts of speech
 Simple versus (VS) complex
- This part is my existence, which I will never recover. Can I reason as a god will listen?
- Adam named the animals (Genesis 2:19-20)
 Pronounce Sibboleth (Judges 12:6)
- 3. Pray continually (Luke 18:1-8)
- How to...use the word? My earlier work has been to refer to the word. To look for one I deem as 17 Mo fe wa productive in the word2 I want to be productive in the word? Where Mr. word. has developed it is need (2 Xiong 8.63 i)? The select injust so on thave default values.
- Intersects injusts on tot new decisions values.

 The Scripture table is a one-to-one mapping between the Bible version and column. These arrangements are futle when there are inconsistencies in the Bibles versions separations. An alternative is to have a table for each version. Publishers issue Bible versions the Bible teach us about twins? Full-Text search? We have given preference to the word, not the commentary, which is subjective.

- The remember table correlates the events and the calendar. Currently, the author is manually deriving the entries for the Remember table. When there is an association, then the author considers the first, last, relevant mentions
- 1. To forget time is responsible (Revelation 21:23, Matthew 17:5, Mark 9:7, Luke 9:35).
 2. What replaces time (Ruth 1:13)?
- The gain from automating this process will
- Limiting human labor
 Speeding up the task
 Reducing storage need
- DontFeelLeftAlone.html

| Title | Scripture Reference |
|-------------|---|
| Servitude | Jeremiah 25:11-12, Jeremiah 29:10, Daniel 9:2 |
| Fulfillment | Luke 9:31 |
| Incentive | Daniel 12:13, Isaiah 53:12 |

The author's work is record specific, GetAPage.html. Further work may consider the entires for a particular date, datetime range, or HisWordID set basket? What this info to 2022-20-1-10, I will recall that the birthday of biological mother is coming up, on 2022-01-12. I should pray about this and resinforce effort. What is He, starting to say! I Littlera giotar but a paid development to this design. There is key to reason. This work is not destinately nor inflammatory nor inflammatory.

- 1. Issue a SQL database query statement <u>SQLBHTMLTable.html</u>. This is the most raw form of querying the database, but it offers the most flexibility, and it does not restrict, to pre-built application.

 2. Navigate the web pages from a client browser <u>2019-10-05ArtfactDescription.html</u> WhenThePastor1sPreachino?os/DontWithTheScriptureTbComeInSubsequent.html

 3. Build a web service requestor, without the limitations of Cross-origin resource sharing (CORS).

 4. Download the DLLs, or the source files, and customize, if necessary <u>WordFagineering</u>

Will SQL deliver all the purpose in the Bible?

Such as, will a query language find the mother, father, and child relationship?

**RICH WINE SELECT ScriptureSeference, Kinglamselversion From Bible. Scripture WEER Kinglamselversion LIXE "Nkmed" and Kinglamselversion LIXE "Nation"

 Background

- Prophecy and Fulfillment

- AlphabetSequence.py

Perhaps, other programming languages should have their own sample code. The author is only conversant in English and Yoruba, additional work will be to see the use in other lingua franca. And, the priest said. Are one only for me?

Which side, the love felt?

SQL returns records in rows; there is a result set. Would we, be able, to amalgate the result set? For example, how can we, find themes in the Bible? When you enter a topic, can we return a trend? Clustering, can we return a number; as its present (1 kings 19:11-13)?

Initially, when I got a word, I made efforts to expound, on this word; but now, I share the word, and wait on God to reinforce the word, or share a new theme.

2019-530 My ancestral home is Ille-Ille, the site of the Oraminys staff. My search for the word, <u>Staff</u>, inspired relating the Bible to my life. Staff, first occurs in, (<u>Genesis 32:10</u>). In my ninth year, my twin sibling and I, relocated from Ille-Ife Staff School to Lagos. In our tenthy ear, we wisted unknown. In my 237md year, I re-located to the United States of America (USA).

God intended man, to be a personal use. The work of the author is an individual effort, and it targets a singular person. The author separates his work into web pages, but the user may click on a hyperlink, to get more information, and sometime do additional work. The work of the author, builds on the efforts of other people, like the Bible, dictionary and commentary. The HisWord table and associated queries, only currently refers to the contribution of the author. How could we, specialize our work? Who uses, and for white? The setting, is it normal? What are the influence of God, as a person? What are His contribution, solely to nam? What part of Him, as it parties white, as a person? What only as many faced on Ne? What stimulate you, as a human being; is where My opinion placed? The author read the Bible and listened to His word, prior to the introduction of AlphabetSequence. Where do we follow, His partnership? He has said the word; I have collaborated with Him.

Outstanding Work

The source code and schema are available at Github.com. This means that the public can review and make updates to the original work of the author. This aged work is not up-to-date with the industry trend, such as cloud computing, mobile applications, decentralized ledger, nosel, Part of the justification for this immaturity; is the need to maintain a low entry point and capture a wide audience for its adoption.

Whose for social networkings sites like WordPress, cifuthy, writter, Linkedin, Facebook, etc., When nothing without the; is sufficient without here I retain.

I use grammarcheck.net. I am proposing a specialization to correct scripture reference. For example, there are many questions and answers, but a further development is to automate the task of correction. (Luke 3:23. Matthew 22:41-46. Matthew 22:22.

I use gammarcheck.net. 1 am proposing a specialization to correct sorigiture reference. For example, there are many questions and answers, but a further development is to automate the task of correction. (Luke 3:23. Matthew 22:41-46. Matthew 22:28. Mark
Z-Genesia 3.B.) They are not one automate the put a thought (pained 1:25-28.)? Ability to say.

When does he say a word, when does the task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task in the past, present or future?

When does he task and the start is the same and comprehend the word of God. What can the author provide to the other; to sale author? God made man as similar to him to see how life can be? If I spoke the same, how an I the same? I know, I am. The love of being the same supersedes feeling the same. Being in the spirit; is alluding to the sufficiency of men.

When did He immediately one what he wanted?

3 days Mount Tempt Genesis 22 Tempt Matthew 27:33. Mark 15:22. John 19:17. Matthew 16:21. Matthew 17:23. Matthew 20:19. Matthew 27:64. Mark 9:31. Mark 10:34. Luke 9:22. Luke 13:32. Luke 18:33. Luke 24:71. Luke 24:71.

Terminology - Words and Meaning

When you write a thesis, it is a paradigm work, shift in thinking, and it should contain a terminology section. The practice of the author will be to list existing words, and include their meanings. For technical jargons, the author will rely on the Internet, as a definition resource. If the author is introducing a new word, the author will explain its meaning, but this is rare.

Wordfingingering Created of an intellect.

Client-Side Programs

The norm of today is to build with HTML, JavaScript, CSS.

base The database of choice is Microsoft SQL Server. Prior to specializing on SQL Server, the author experienced fifth generation scripting languages such as dBase, R:BASE, Clipper, Access, FoxPro; other relational databases, like Oracle, SQL Any Watcom, Syhase, and Informix. When the author applies the Microsoft implementation of SQL, Tensact-SQL and SQLCIR or SQLCIR (SQL Common Language Runtime), the author risks not being vendor-agnostic.

HyperText Markup Language (HTML)
The document that the reader is currently reading, uses rudimentary formatting and links. JavaScript dynamically accesses and updates the Document Object Model (DOM). During the first page load, the application retrieves the available Bible viole that the properties of the larger formatting and properties the result safe, out-the-fit

HyperText Transfer Protocol (HTTP)
The web uses the HTTP network protocol; there is a limit to how many requests that a particular host, may handle simultaneously

HTTP Server
The author use Microsoft Internet Information Server (IIS), the author has experience with both the Apache HTTP Server, Apache Tomcat Server. The author preference for IIS, includes its tight integration to the Windows Operating System, SQL Server and and formation of the Apache HTTP Server.

Latency
This is the amount of time, it takes to respond to request. The use of AJAX, helps to decrease the duration, the length of time, it takes to load-up a page.

Linking
This dissertation depends on the structural navigation links for the table of contents. The associative links help to drill-down to particular scripture reference and Bible words. The author also lists, outbound links, re-direct to source web references, as in the bibliography section. Resistration with search engines is one of the ways to encourage incoming links. IUITE LEARNINS

A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P, if its performance at tasks in T, as measured by P, improves with experience E (Goodfellow et al. 2016). Machine Learning takes as input: data and answers and derives rules (Gliesch) et al. 2020.

Page Size

The HTML file sizes are small; since the author distributes the work between HTML, JavaScript, CSS and the back-end source files.

Semantic HTML
This is the choice of a particular HTML tag, to reinforce its meaning and content.

Server-Side Programs Ever circulating?

Style Sheet
The author prefers linked to embedded style sheet.

Web Application
The everyday web pages of the author include:
1. GetAPage_html
2. BibleWord.html
3. ScrigtureReference.html
4. DateDifference.asxx

WordEngineering
To study the Bible by using an engineering approach.

SOI Server Execution Plan

(Grant Fritchey).

SQL Server Execution Plan - ScriptureReference.html?scriptureReference=Genesis 22, Daniel 9:24-27, John 1:1, Jude

ScriptureReference sol ScriptureReference. solplan ScriptureReference.ong

The SQL script contains four scripture references; therefore, there are four execution plans. Three of these execution plans, Query 1, 3 and 4, will solely make use of the low cost clustered index primary key seek, PK_Scripture. These three have trivial optimization levels.

Opera John Section (Chapter ID, Versell), therefore, the PK_Scripture is referenced as well in a Key Lookup. Both the Index Seek and the Key Lookup have Seek Predicates, and the Nested Loops will join the results.

(Don Jones)

Performance Monitor - SQL Server Objects

Style of Writing

What has prompted your interest in the topic?

- The driving forces of arriving at the author's work are:
- During his education in Australia, the author was exposed to Case-Based Reasoning and Unified Modeling Language. Both themes will suggest the future is made of the possibility. We do not arrive at the future, at once, we gradually move into it.

 The author was receptive and felf most at home during worship.

What kinds of questions will you be asking?

- How can no word be lost? How does the author preserve the word of God, audience, scenario, timing, reference? What retention has He made of His past?
- How do your questions fit into the broader intellectual tradition?
- The book, The Bible Code by Michael Drosnin, is the sole source for this religious work.
- How will you answer your questions?
- If love is not spent, where is it needed? Last modified: 09/30/2025 21:58:48 Copyright © 2025 Ken Adeniji <u>KenAdeniji@hotmail.com</u>
