Kehinde (Ken) Adewumi Adeniji

A thesis submitted for the degree of Doctor of Philosophy in the Faculty of Science.  
[Translate English - Yoruba](#)

### Abstract

**Thesis Statement:** This dissertation introduces [AlphaBeeSequence](#) ( 2 [Corinthians 10:9-18](#) ). The *AlphaBeeSequenceIndex* is the result of a pure function to sum alphabet places [AlphaBeeSequence.cs](#) . The *AlphaBeeSequenceIndexScriptureReference* are the offsets from the beginning and the ending of the Scripture. The *AlphaBeeSequenceIndexScriptureReference* consists of four parts; there are two references each to particular chapters and verses. The first mention is the forward verse, which the author calculates by determining the *AlphaBeeSequenceIndex* verse in the Bible. The second mention is the forward chapter, and this the author calculates as before, but by substituting the verse with the chapter. Both the backward chapter and backward verse are the corresponding, anticlockwise places. The importance of this work?

- 2021-05-20T17:26:00 [Follow God as a character](#)
- 2022-11-29T12:53:00 [To track dates and words? And... find meaning, correlation](#)

Where does the Bible list? Creation days, genealogies, allies, plagues, tribes, journey, commandments, reigns, kingdoms, disciples, fruit of the Holy Spirit, churches.

### Acknowledgments

Chuck Messler of [Koinon House \(KHouse\)](#) is worthy of note, faith ([Hebrews 11](#)). The author is indebted to [Loy Schoson](#), his Master's degree supervisor, at the [University of Technology, Sydney](#) (UTS), 15 Broadway Ultimo (NSW), 2007, Australia. The author is grateful to Tom Osborne, his Artificial Intelligence instructor, and Brian Henderson-Sellers, his Object-Oriented Technology instructor; both also at UTS. The author makes mention of his colleagues at UTS: Decler Mendez, Cesar Orcando, Ricardo Lamas and Peter Milne. The author stretches his open hand to Robyn A. Lindley, his Doctorate degree supervisor at the [University of Wollongong](#) (UOW), NSW 2522, Australia.

| It is not an e-mail address, since it does not include an at sign, @. |                |                                                             |
| It defaults to port 80.                                               |                |                                                             |
| It defaults to the homepage.                                          |                |                                                             |

The issuing of this domain name may be related to commencing writing the book titled Ocean Senior on 2004-03-23. There has not been a follow-up on future artifacts. But when one reads the Bible, the book of Revelation, which starts with the letters to the 7 churches in Asia Minor, does not instigate future alteration.

### The Bible Database

#### The Scripture Table

The content of the Bible SQL Server database is principally the Scripture table. The Scripture table has a [composite primary key](#), which consists of three columns; the BookID, ChapterID, and VerseID columns. The SQL statement

```
ALTER TABLE Bible..Scripture ADD CONSTRAINT PK_Scripture PRIMARY KEY CLUSTERED
(
    BookID ASC,
    ChapterID ASC,
    VerseID ASC
)
```

is for setting the primary key.

There are varchar(MAX) columns which has the text for each Bible version.

#### The Scripture Table's BookID Column

Because there are sixty-six books in the Bible, the BookID ranges between 1 and 66; starting from Genesis and ending at Revelation. The SQL statement

```
ALTER TABLE Bible..Scripture ADD CONSTRAINT CK_Scripture_BookID_Range CHECK (BookID BETWEEN 1 AND 66)
```

will set the range restriction.

#### The Scripture Table's ChapterID Column

The ChapterID ranges between 1 and 150; the SQL statement

```
SELECT MAX(ChapterID) FROM Bible..Scripture
is for determining the upper limit. The SQL statement
```

```
ALTER TABLE Bible..Scripture WITH CHECK ADD CONSTRAINT CK_Scripture_ChapterID_Range CHECK (((ChapterID)>=(1) AND [ChapterID]<=(150)))
```

will set the range restriction.

[There are individual chapters for each book.](#)

#### The Scripture Table's VerseID Column

The VerseID ranges between 1 and 176; the SQL statement

```
SELECT MAX(VerseID) FROM Bible..Scripture
is for determining the upper limit. The SQL statement
```

```
ALTER TABLE Bible..Scripture WITH CHECK ADD CONSTRAINT CK_Scripture_VerseID_Range CHECK (((VerseID)>=(1) AND [VerseID]<=(176)))
```

will set the range restriction.

```
SELECT TOP (1) BookID, ChapterID, VerseID, AmericanStandardBible, BibleInBasicEnglish, DarbyEnglishBible, KingJamesVersion, WebsterBible, WorldEnglishBible, YoungLiteralTranslation, ChapterIDSequence, VerseIDSequence,
FROM Scripture_View
ORDER BY VerseID DESC
```

Will say the longest verse occurs in the 19th book of the Bible, Psalms, and its 119th chapter; 597th chapter of the Bible, 16075th verse of the Bible.

#### The Scripture Table's KingJamesVersion Column

The author would have considered placing an index on the KingJamesVersion column, but the author found out during his research that the verses in the KingJamesVersion are not unique nor distinct, and indexes are not applicable to where like query conditions with leading wildcards.

#### The Scripture View's Testament Column

The SQL statement

```
(case when BookID <=(39) then 'Old' else 'New' end)
```

will set this computed column. The Testament column serves as a filter, such as, in the [BibleWord.html](#).

#### The Scripture View's BookTitle Column

The SQL statement

```
dbo.usf_BookTitle(BookID)
```

It is for determining this computed column. As expected, there is a correlation between the BookID column, and its corresponding BookTitle column; it progresses from Genesis to Revelation. Because SQL does not support arrays, the author chose to write an [SQL CLR](#) C# function for determining the BookTitle when passed the BookID. Although C# supports [Design by contract](#) assertions, the author only checks BookID range validity, and returns NULL, if the argument does not fall within this range. The author could throw exceptions, but the author does not know the side effects nor the full ramifications. Instead of writing and determining the book title using C#, an alternative is to use a database table. A table with two columns, BookID and BookTitle, will store and make extractable the sixty-six books. For example, the first book of the New Testament, the 40th book, spelling is Matthew or Mathew, double t versus (VS) single t. An improvement on the current implementation is to use soundex to 2026-01-22T10:12:00 index the book title and determine the corresponding BookID.

#### The Scripture View's ScriptureReference Column

The SQL statement

```
dbo.usf_ScriptureReference(BookID, ChapterID, VerseID)
```

Will calculate the conjecture of the BookTitle, ChapterID, and VerseID. Since this is a computed column, therefore, the author is not able to set its [Entity Integrity](#); if it were not the SQL statement

```
ALTER TABLE Bible..Scripture ADD CONSTRAINT uc_Scripture_ScriptureReference UNIQUE (ScriptureReference)
```

Will set its entity integrity. The distinction between raw data versus computed columns is performance and space.

#### The Scripture Table's ChapterIDSequence Column

When loading data, the author decides the ChapterIDSequence column, and increments it when the BookID and ChapterID, change during loading. The ChapterIDSequence ranges between 1 and 1189, starting in Genesis 1 and ending at Revelation 22. The SQL statement

```
SELECT BookID, ChapterID FROM Bible..Scripture GROUP BY BookID, ChapterID ORDER BY BookID, ChapterID
```

will decide the greatest value for ChapterIDSequence. An alternative SQL statement

```
select count(
distinct
    cast(BookID as varchar(6))
+ ','
+ cast(ChapterID as varchar(6))
)
```

ActToGod

This is subjective work; the author applies intelligence to find patterns and resemblances in the Bible.

I found out about this keyword through Google Suggest.</li><li>King James Version (KJV). I found out about this keyword through Google Suggest.</li><li>2008-06-15 Drawing code as house. Sergey Brin and I were inside a classroom. Sergey Brin sat to the right, east, at the back, and I sat to the left, west. Sergey Brin was writing code, drawing a house. I asked Sergey Brin what a billionaire was doing writing code to draw a house? I went to the north-east, prostrated, and talked to an African descent male. There were children in the middle center of the room extending eastward. <a href="#">Rockridge station</a> 5660 College Avenue, Oakland, California (CA) 94618.</li><li>2026-02-01T09:48:00 At the intersection of Seward Drive and Creekwood Drive, south-east house. 4820 Seward Drive, Fremont, California (CA) 94555. <a href="#">It is not God work... it is done by work with your circumstances.</a></li><li>Scene 1: On Seward Drive I was walking eastward, and at the intersection of Seward Drive and Creekwood Drive, south-east house. 4820 Seward Drive, Fremont, California (CA) 94555. I saw 2 males who were standing beside cars. I approached them believing they were Germans, but they turned out to be Hindi. Scene 2: My twin sibling and I went out to eat fish at an Asian restaurant. When we were about to depart, the restaurant's male workers to the north misted up our take-away food order, 10:30 label identifiers (Genesis 37:9-11). Scene 3: I thought of Sergei Brin when I was with some Asian males, to the east, inside a Sport Utility Vehicle (SUV) with a vehicle license plate with a label like Tirat or Tazat. The Jews could kill me as their preservation or solution. Interpret: Hindi make-up 1/5th of the world population... attrition due to unbelief. 2026-02-01T12:00:00 At the intersection of Seward Drive and Creekwood Drive, south-east house. 4820 Seward Drive, Fremont, California (CA) 94555. <a href="#">Who is relevant... as a woman?</a></li><li>2026-02-01T13:34:00 At Charter Square, Albertsons Lucky, and Dulhan Grocery. 2026-02-01T13:37:00 <a href="#">The focus has been... Scales & Measurements

| Type of Scale      | Commentary                                                                                                                                                                                                                                                                 | Example of Scale                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Nominal Scales     | The numbers may serve as tags or labels which are quantitative with no values.                                                                                                                                                                                             | <ul style="list-style-type: none"><li>Introduced on July 1, 1963, the ZIP Code system (an acronym for Zone Improvement Plan) traditionally contained five digits. In 1983, an extended code was introduced named ZIP+4, these postfix a hyphen and four additional digits for more specific addressing. The author does not validate the Zip Code, since it is not a world standard. 2025-06-07T07:08:00 <a href="#">Our view of the world attains us.</a></li><li>Telephone number</li></ul>                                                                                                                                                                                                                                                                          |
| Categorical Scales |                                                                                                                                                                                                                                                                            | Dewey Decimal Classification used in libraries                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Absolute Scales    | An absolute scale is a count of individual, distinct items in the set.                                                                                                                                                                                                     | <ul style="list-style-type: none"><li>This may be the physical count of word occurrences in the Bible.</li><li>The count of books that are in the Bible groups. For example, there are 5 books by Moses, and 4 Gospel books.</li><li>The SQL COUNT() function returns the number of rows that matches a specified criterion.</li><li>The Microsoft SQL Server variable @@ROWCOUNT returns the number of rows from any statement, even if it's not DML or a SELECT query.</li></ul>                                                                                                                                                                                                                                                                                     |
| Ordinal Scales     | An ordinal scale puts the attribute in a linear order. There are no operations or computations done with it.                                                                                                                                                               | <ul style="list-style-type: none"><li>In an ordered list HTML element, 2025-06-08T09:22:00 <a href="#">the list items are sequentially arranged.</a></li><li>An identity column is a numeric column in a table that is automatically populated with an integer value each time a row is inserted.</li><li>The SQL ROW_NUMBER() function is a temporary value calculated when the query is run. To persist numbers in a table, see IDENTITY Property and SEQUENCE.</li><li>The @counter-style CSS at-rule lets you extend predefined list styles and define your own counter styles that are not part of the predefined set of styles. The @counter-style rule contains descriptors defining how the counter value is converted into a string representation.</li></ul> |
| Rank Scales        | They have a linear ordering, and an origin. Having an origin prevent some of the transitivity problems.                                                                                                                                                                    | <ul style="list-style-type: none"><li>Military ranks</li><li>Mohs scale for hardness (geology) of minerals</li><li>Scotchell scale for the strength of peppers</li><li>Completely Automated Public Turing Test to tell Computers and Humans Apart (CAPTCHA) is a type of challenge-response Turing test used in computing to determine whether the user is human in order to deter bot attacks and spam.</li></ul> <p>The Contact table contains a title column. SQL offers a group by, and having clause. Strength of password? Soundex?</p>                                                                                                                                                                                                                          |
| Interval Scales    | An interval scale is based on a standardized unit or interval. Another property of these scales is that they have no natural origin.                                                                                                                                       | Date difference, UNIX epoch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Ratio Scales       | These scales have a base unit, natural origin and meaningful operations. We also allow the creation of compound units with ratio and interval scales. They are called ratio scales because the units of measure are expressed as multiples or fractions of some base unit. | <ul style="list-style-type: none"><li>HTML input range</li><li>CSS percentage</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

(Joe Celko, 2025-03-07).

Relational Database Hierarchy

- Catalog: Is a collection of databases, for example, Bible, WordEngineering, URL.
- Schema: Is a collection of objects, which may include tables, views, indexes, stored procedures, triggers.
- Table: Is 2-dimensional with horizontal rows and vertical columns.
- Column: Is a physical actualized attribute.

Functional Dependencies

| Determinant                                                                | Functionally Dependent                  | Implementation                 |
|----------------------------------------------------------------------------|-----------------------------------------|--------------------------------|
| Bible.Scripture.BookID                                                     | Bible.Scripture_View.BookTitle          | Bible.udf_BibleBookIDTitle()   |
| Bible.Scripture.BookID, Bible.Scripture.ChapterID, Bible.Scripture.VerseID | Bible.Scripture_View.ScriptureReference | Bible.udf_ScriptureReference() |
| Determination is achieved through computed columns.                        |                                         |                                |

(Allen G. Taylor, 2024).

Index Query Type

| Query Type         | Commentary                                                                                                                                                                                                              | Example                                                                                                                                                                                                                     | Structured Query Language (SQL)                                                                                                                                                                                 |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Point query        | It will return only 1 record, and it is restricted by an equality condition on the primary key or unique index.                                                                                                         | Useful for searching for a particular verse.                                                                                                                                                                                | <pre>SELECT * FROM Bible..Scripture_View WHERE VerseIDSequence = 1</pre>                                                                                                                                        |
| Multipoint query   | It may return more than 1 record, as there may be multiple records. It is restricted by an equality condition on part of a potential composite key.                                                                     | Useful for searching for a particular chapter or book.                                                                                                                                                                      | <pre>SELECT * FROM Bible..Scripture_View WHERE ChapterIDSequence = 1</pre>                                                                                                                                      |
| Range query        | It returns a set of records whose values are within an interval or half interval. If it is restricted by both lower and upper bounds, then there is an interval. It is a half interval, if it specifies only one bound. | Useful for searching for consecutive verses, chapters or books.                                                                                                                                                             | <pre>SELECT * FROM Bible..Scripture_View WHERE VerseIDSequence BETWEEN 1 AND 10 ; SELECT * FROM Bible..Scripture_View WHERE VerseIDSequence &lt;= 5</pre>                                                       |
| Prefix match query | The set is the match of an attribute.                                                                                                                                                                                   | The author is unfamiliar with any use-case where only the first part of the wildcard is searched. The first part of the scripture reference is similar. For the BibleWord searches, the author uses like for match queries. | <pre>SELECT * FROM Bible..Scripture_View WHERE KingJamesVersion LIKE (   SELECT TOP 3 KingJamesVersion   FROM Bible..Scripture_View   GROUP BY KingJamesVersion   ORDER BY COUNT(KingJamesVersion) DESC )</pre> |
| Extremal query     | It returns either the minimum or maximum extreme.                                                                                                                                                                       | Statistics                                                                                                                                                                                                                  | <pre>SELECT * FROM Bible..Scripture_View WHERE VerseIDSequence = (   SELECT MAX(VerseIDSequence)   FROM Bible..Scripture_View )</pre>                                                                           |
| Ordering query     | The records returned are sorted.                                                                                                                                                                                        | The results of the author are normally in ascending order.                                                                                                                                                                  | <pre>SELECT TOP 10 * FROM Bible..Scripture_View ORDER BY VerseIDSequence DESC</pre>                                                                                                                             |
| Grouping query     | The records returned are grouped.                                                                                                                                                                                       | Rarely does the author group rows by issuing the group by clause.                                                                                                                                                           | <pre>SELECT BookGroup, COUNT(BookGroup) BookGroupVersesCount FROM Bible..Scripture_View GROUP BY BookGroup ORDER BY BookGroup</pre>                                                                             |
| Equi-join query    | The records are retrieved from multiple sources.                                                                                                                                                                        | The author uses views for table joins.                                                                                                                                                                                      |                                                                                                                                                                                                                 |

(Allen G. Taylor, 2024).

Designing Software Architectures: A Practical Approach Making Design Decisions

Principle 1: Use Facts

Principle 2: Check Assumptions

- This whole thing started with keeping [a work reference](#).
- Even though Yonbu is the native language of the author, he still and invariably relies on translate.google.com.
- The author depends on a typing assistant.

Principle 3: Explore Contexts

Information reuse was the driving force of this software engineering. The author sought to learn programming and retain knowledge.

Principle 4: Anticipate Risks

The undesirable outcome and their probability of re-occurrence will include:

- Data loss or corruption because of missing the database modification command and lack of timely archiving
- Hardware, software, or network failure
- [Vendor withdrawal of support](#)
- Microsoft:
  - Introduced .NET core and Model-view-controller (MVC).
  - Inability to restore deprecated Microsoft SQL Server backup versions.
  - Command-line reverse-engineering of database script does not conform with the newly released data types.

Principle 5: Assign Priorities

The author prefers to first build and implement his strengths and specialties in the back-end (database and process logic), prior to designing the creative user interface.

Principle 6: Define Time Horizon

[What period has God used?](#)

- In the year 1988 — military census age: I Am taking you on a journey. I was 20 years old, and this was 12 years, before the year 2000, the millennium ( [Numbers 1:3](#), [Luke 2:42](#) ).
- On 1997-12-31 — priesthood age: I have brought something against you, but I Am with you. My 30th year, and this was 2 years, before the year 2000, the millennium ( [Numbers 4:30](#), [Matthew 2:16](#) ).
- In the year 2007 — generation time span: this masturbation will bring water. My 40th year ( [Numbers 14:33-34](#), [Numbers 32:13](#) ).

Principle 7: Generate Multiple Solution Options

[How versatile am I...at amending others? I have to rely on my perception to technology providers.](#)

Principle 8: Design Around Constraints

[Relational databases offer the ability to set constraints.](#)

- Data type
- Nullable
- Primary key and unique index
- Foreign key

Principle 9: Weigh the Pros and Cons

- Data import...data input: Initially, the author created an XML file and imported it into database tables via a C# program application. When this process malfunctioned, the author suspended his work. The author resumed work by doing data input via Microsoft SQL Server Management Studio grids. This diversion did not require database changes, achieving separation of concerns.
- The use of non-supported beautifying css is responsive web design.

(Humberto Cervantes, Rick Kazman June 2, 2024).

Hitachi Modern Data Infrastructure Dynamics Drowning in Data: A Guide to Surviving the Data-Driven Decade Ahead

- Microsoft SQL Server offers the capability to cut off the size of the result set. The GetAPage.html gets minute data from the various database tables and views. The user may be given the opportunity to customize which results to retrieve, for example, AlphabetSequence, BibleWord, HisWord, or Dictionary. A literate person may not need as much data. Setting this restriction will be concise queries.
- An approach is to offload computing to the local host.

(Hitachi 2023).

Database Performance

- Query optimization: Server-side database processing offers the best performance scenario. The use of stored procedures and functions is recommended. The hold backs are their deployments and SQL variances. Prepared statements are fast, resource lenient, cached, and they prevent SQL injection attacks. The author falls back on dynamic SQL for complex queries.
- Indexing: The author is well aware of the pros of indexing, but its cons include additional space and effort. The less performant productive database objects are keys and constraints.
- Data Modeling: Normalization
  1. First Normal Form (1NF): A relation meets this rule when each attribute has only one value. Another condition is that all the attribute values are atomic and non-composite. In the HisWord table there may be multiple contacts, but only the most prominent contact is recorded. A contact must be first created in the Contact table, prior to its referencing, to satisfy its referential integrity constraint. The author does abide with 1NF in the HisWord table. The URI column may contain multiple e-mail addresses. The scripture reference column may not be a unit.
  2. Second Normal Form (2NF): The ActToGod table does not comply with this rule, since its Minor column is functionally dependent on its Major column. Computed columns minimize the potential for this.

(Craig Mullins, 2023-12-18)

Database Management System (DBMS)

There are 2 types of DBMS. These are:

- Shared file-based: For example, Microsoft Access
- Client/Server: For example, Oracle, SQL Server, MySQL.

SQL Usage

Database Information

| Statement             | Commentary                                                                                   |
|-----------------------|----------------------------------------------------------------------------------------------|
| sp_databases          | The sole work of the author, the WordEngineering database size, is currently 33390528 bytes. |
| sp_server_info        | The database version is Microsoft SQL Server 2025 - 17.0.1115.1                              |
| sp_spaceused          | The WordEngineering database currently uses 32607.94 MB.                                     |
| sp_statistics HisWord | The cardinality of the HisWord table is 122966.                                              |
| sp_fixddrives         | Returns a list of physical hard drives and the amount of free space on each one.             |
| sp_mover              | Returns version information about SQL Server.                                                |

SQL Statement

| Statement              | Commentary                                                                                                                                                                                                                                                                             |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Select                 | The select statement for data retrieval is the most popular statement. <a href="#">Most select applies</a> to Bible. <a href="#">Scripture_View</a> . Using the select statement is safe, but it may impact performance. An alternate replication target repository may serve queries. |
| Insert, Update, Delete | The insert, update and delete statements are for data maintenance.                                                                                                                                                                                                                     |

Where Clause Operators

| Operator                                | Commentary                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| =, <, >, !=, <=, >=, !=, <=, >=, >=, >= | The operators listed will check for a single value. The operators that consist of '!', will check for non-matches. <a href="#">In most cases, rarely is this in use. != or/and !=. This is the first time...he is becoming aware...of these expressions. This is the first time...he is becoming aware...of these operators. Queryvine for a date or number will search for particular types.</a> |
| BETWEEN                                 | This is a range check that accepts a beginning and ending value. It is not highly used.                                                                                                                                                                                                                                                                                                           |
| NULL                                    | No value                                                                                                                                                                                                                                                                                                                                                                                          |
| IN                                      | A comma-delimited list of valid options within parenthesis.                                                                                                                                                                                                                                                                                                                                       |
| LIKE                                    | Wildcard filtering                                                                                                                                                                                                                                                                                                                                                                                |

(Ben Forta, 2017)

Database Scaling

- The transition to computed columns results in smaller storage requirements.
- Microsoft SQL Server supports multiple databases; therefore, reducing archive needs.
- Normalization, object-to-relational mapping, is light load.

Database Exclusivity

Row Limit

| Title        | Commentary                                                                                                                      |
|--------------|---------------------------------------------------------------------------------------------------------------------------------|
| TOP          | Set a limit of the number of rows returned or a percentage of the rows from the source.                                         |
| SET ROWCOUNT | The database will retrieve all the rows, but if there are excessive rows it will later <a href="#">limit to required rows</a> . |

Where Clause

| Title                                                  | Commentary                              |
|--------------------------------------------------------|-----------------------------------------|
| Like wildcard                                          | Preceding or following restriction %s/% |
| Check for NULL                                         | IS NULL versus (VS) IS NOT NULL         |

| Table join supersedes the previous column key equal to | FROM table join primary and foreign key |

Select Clause

The select clause may explicitly include a column list. Pre-compiled statements that implicitly cater for all the source columns, may not be up-to-date on the column-list.

Group By Clause

The group by statement is not for detail listing, except when it is used to regress to the distinct clause. Group by supports statistics, such as, count, sum, min, max, avg.

Having By Clause

The having clause augments the group by clause. It places restriction on the group(s) returned.

Insert Statement

Inserts give room to omit the default columns. The Identity Insert statement also grants explicit entry of its identity column.

Nullable Column

Information unknown is useful for forwarding processing, until and if the information is added. Outer Join stands for this purpose.

View

Enhances tables by compacting and/or extending the information set.

Constraint

Primary and foreign keys, unique indexes and check constraints.

Data Cleansing

- Is the source of bad data input internal, on-line users, or error in programming? He doesn't envision error in reference data.
- Does the vendor have data definition language (DDL) to pre-empt data corruption?
  - Data type and size: String, number, date, logic, boolean?
  - Not nullable? Can not be empty?
  - Range check: Expense must be greater than zero? Dates of activities must be after the establishment creation date.
  - Check constraints, for schedule, dated from must precede dated until.
  - Non-surrogate primary and foreign keys with unique indexes help to ascertain data.
  - Default columns are probable system generated that the users may leave unfilled that are available from sequence, identity, system clock.
- Is the data incomplete, such as abbreviation, for example CA or California, telephone numbers without country or area code?
- Is it data manipulation language (DML) deadlock, arrangement of data modification? Transaction commit or rollback? Cascade?
- Duplicate entries are isolatable by using the group by clause.

The author prescribes the steps below to begin database set-up and usage

1. Acquire a database management system (DBMS). Various varieties of DBMS are available. The user may download a DBMS, get a compact disc, or select from the cloud.
2. Install a DBMS.
3. Decide on a user interface for managing the database. For Microsoft SQL Server, the choices include the SQLCmd console utility or the SQL Server Management Studio or Azure Data Studio.
4. Create database. Microsoft SQL Server supports multiple instances and databases.
5. The data definition language (DDL) includes the commands to create, alter, or delete tables, views, primary and foreign keys, indexes, constraints and defaults.
6. The data manipulation language (DML) are commands to insert, update, and delete the database rows and columns, with the option to use the where clause.
7. The SQL Server maintenance plan is for database housekeeping, for example, backup, restore, and re-arrangement.
8. Stored-procedures, triggers, and functions are programmable logic.

Indexing

The author manually indexes according to the following progression:

- The URI database is separable into the following tables:
  - URIChest
  - URIEntertainment
  - URIGoogleNews
  - URIWordEngineering
- The SacredText table is for scripture reference.
- The Exact table is an index of the words in the King James Version (KJV) of the Bible.
- The source of information is in the bibliography section.

(Search engine indexing)

Structured Query Language (SQL)

Set theory

The set we will mostly deal with is the HaWord table. Is in order of occurrence.

Predicate logic

The choice of SQL Server imposes datatype limits.

(Itzik Ben-Gan, 2023-07-03).

GitHub

Accessibility

- Image elements have alt attributes; so that the reader may perceive what it shows
- The software offers the option to generate an image in the .png format
- The author does not duplicate hyperlinks
- The user may solely use the keyboard navigation to tab between the various controls, this substitutes for the taborder attribute. The autofocus attribute is for setting the cursor on the first input control.

JavaScript Optimizing native JavaScript

1. Excessive number of objects: Each web page mainly contains 2025-11-29T08:56:00 the minimalistic page\_load() and query\_submit() methods. Some web pages which use web services to retrieve information from the database also include <https://github.com/KenAdeniji/WordEngineering/blob/main/ITS/WordEngineering/WordUnion/9432.js>, which contains 1 object for data render methods, and two dimension arrays for select options. 2025-11-29T10:11:00 A JSON is the result set... returned from the database.
2. 2025-12-01T20:01:00 Unnecessary data manipulation: <https://github.com/KenAdeniji/WordEngineering/blob/main/ITS/WordEngineering/WordUnion/9432.js> does 2 types of date calculations. These are the:
  - Call the explicit nowTimezoneOffset(), daysAdd(), daysDifferenced() variations
  - 2025-12-01T20:16:00 Implicitly insert the date difference into an HTML table, DateUntil - DateFrom, 2023-02-17 BiblicalCalendar added to table, as a computation of FromUntil. <https://github.com/KenAdeniji/WordEngineering/blob/main/ITS/WordEngineering/WorkBook/DontCallitAlone.html> 2023-02-17... 2025-12-01 = 1018 days (2 biblical years, 9 biblical months, 28 days) (2 years, 9 months, 2 weeks)
3. 2025-12-01T21:17:00 Excessive error checking: The author does not do error checking, preferring to catch exceptions, for example in AJAX requests. <https://github.com/KenAdeniji/WordEngineering/blob/main/ITS/WordEngineering/WordUnion/9432.js>

```
fetchRender: async function
(
    fetchUri,
    fetchRequest,
    callBack,
    uidisplay,
    rowColumn
)
{
    const postData = {
        method: "POST",
        headers: {
            "Accept": "application/json",
            "Content-Type": "application/json; charset=utf-8"
        },
        dataType: "json",
        credentials: "include"
    }
    postData.body = JSON.stringify(fetchRequest);
    try {
        const response = await fetch
        (
            fetchUri,
            postData
        )
        .then(response => {
            return response.json();
        })
        .then(responseToJson => {
            var dataSet = JSON.parse(responseToJson.d);
            callBack(dataSet, uidisplay, rowColumn);
        })
    } catch (e) {
        uidisplay.innerHTML = e;
    }
};
```

(Robert C. Etheredge, 2017)

Programming

The Author Programs in the Following Tiers and Languages

| Tier                    | Language                                                                  | Commentary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Front-End Browser       | HyperText Markup Language (HTML), Javascript, Cascading Style Sheet (CSS) | The front-end code may run on a desktop, laptop, or mobile telephone that offers a user interface (UI). The task is to accept the user query and to display the result. Initially, as a novice programmer, the author wrote specific code for each user request; later, the author rests on generic code which will handle multiple variety of requests. This is high-level programming, and the skill-set entry level is minimal. The author also believes that the users should not require any formal training to use his work. Customization is achievable by varying the request options, such as entry form selections, query arguments, or data attributes. |
| Middle-Tier Application | CR, Embedded-SQL                                                          | For backward compatibility, the author does not envision moving away from his legacy code investment in Microsoft. The only shift is positioning code away from database inconsistencies in back-end residency. To code, compile, debug, deploy, the experience of the author is with Microsoft Visual Studio and command-line tools.                                                                                                                                                                                                                                                                                                                              |
| Server-Side Backend     | Standard Query Language (SQL)                                             | The author most recent experience is with the Sybase and Microsoft Transact-SQL assortment. Now a days, to be compatible and after experimentation; the author rarely uses Standard Query Language - Common Language Runtime (SQL-CLR). The author does database data entry, maintenance, development by using the Microsoft SQL Server Management Studio.                                                                                                                                                                                                                                                                                                         |

JavaScript Basics: Data Types

- JavaScript supports three keywords for declaring variables. These are the var, let, const keywords.
- From its pre-conception, JavaScript supported the var keyword. When the author does not precede a variable initialization with a keyword, then the variable will have global scope. The author averts from variable hoisting. Variable definition with the var keyword is re-usable. The strict mode is a later addition to JavaScript that helps in enforcing variable rules.
- For one-time definitions, such as, issuing the document.getElementById command, the author relies on the const keyword.
- Unlike some typed languages, JavaScript does not support explicitly specifying the type of a variable.
- JavaScript string comparisons are by default case-sensitive.

Functions and Methods

- Methods are functions that are referable from a class. Methods support object orientation by offering encapsulation, inheritance, polymorphism. The author uses functions when placing localizable code inside the script section of a HTML file; otherwise, generalized methods are referenceable from a JavaScript library.
- JavaScript treats functions as first-class citizens, and they are passable as variables. This abstraction feature is rarely necessary. 2026-05-25T16:17:00 On several occasions, <http://github.com/KenAdeniji/WordEngineering/blob/main/JS/WordEngineering/Word/memGetAPage.html> calls the <http://github.com/KenAdeniji/WordEngineering/blob/main/JS/WordEngineering/Word/union2432.js#pxst> method, and it passes the successCallback method variable name.
- JavaScript does not support method overloading. The earlier arguments array variable and the later parameter default initialization supplements.
- The author consistently uses anonymous functions for processing the success and error returns when using jQuery to access web services.

Conditions

- The author emulates the Microsoft ASP.NET Page.IsPostBack property check, and when it is not so, parse the query arguments; otherwise, skip the parsing and proceed to page submission.

Arrays and Loops

- For displaying the Bible book titles, the 66 books are in a JavaScript iterable array. This reduces the data load from the server to client, and it offers spelling flexibility. The select options resemble similar customization.

HyperText Markup Language (HTML) Document

- The DOCTYPE is the first declaration in an HTML document, and it is the conformation standard specification.
- The html tag is the root and the container for all the other tags.
- The head tag contains the title and the meta tags for the search engine optimization (SEO). The various documents will indicate the cascading style sheet (CSS) directive.
- The body tag contains the visible content of the document. Its resultSet or resultSet div will contain the particular details that the program generates.

(Microsoft)

Data Science

What is data?

The data that the author fundamentally operates on is the word from God. The initial and primary data is textual, but now the author places importance on dates and numbers. What should you do with a number? Even though the Hebrew language is AlphaNumeric, the numbers in the Bible are in words ( [Leviticus 19:26](#) ). When the author receives a number, he records it in the HisWord's table, Word column, as a numeral.

- The author extracts knowledge from data; by finding meaning to the word.
- The author uses scientific methods, such as counting the number of occurrences, determining the first and last occurrences, and excluding the parts of speech.
- The actionable insights take, so far, is to computerize the work.
- The vast majority of the work is structured data. Unstructured data does not fit into the background of the author.
- The application domain is Bible studies; how relevant is the Bible to our work?

Practicing Data Science

- Empirical, find implication from the Bible?
- Theoretical, to determine a better way to doing work?
- Computational, is human labor replaceable?
- Data-Driven, constraints help us to sanitize data. Default values reduces task, are less error prone, brings arrangement.

Where to get Data

- The Bible is our primary source of data.
- The author records information sources. This is either a person or media?

What you can do with Data

- Data Acquisition: The Bible is available on the Microsoft Access database.
- Data Storage: The author imports this tabular data into the Microsoft SQL Server relational database.
- Data Processing: The SQL Select statement is the means of retrieving data from the database. This is not always a monolithic fashion; since there are various ways of composing the queries.
- Visualization / Human Insights.
  - The raw data is viewable on the Microsoft SQL Server Management Studio.
  - The web service, .asmx, file, which is accessible from the browser, offers the opportunity to fill-in the query and see the JSON result.
  - The html presents the result in a human readable format.

Defining Data

- Quantitative Data: This makes itself subjective to numeric computation. AlphabetSequence is an attempt to give value to words.
- Qualitative Data: These are rarely measurable and are personal interpretation.

A brief introduction to Statistics and Probability

At the beginning of the study, the author made a presumption that words are unique. Later the author found out that there are duplicate Bible verses.

(Microsoft)

Data

Structured and Unstructured

Structured data is alphanumeric put in row-column. Unstructured data is either text, image, audio, or video. This research is mainly structured data.

Standard

The author imports complete, not NULL nor empty data, such as the Bible and the dictionaries. The author achieves data validity by constraining and restricting inputs. Since this is not a commercial work, Key Performance Indicators (KPIs) are not vital. The author references and is not tampering with authoritative Bible work; this helps to make sure correctness - accuracy, consistency, integrity. Timeliness is effectual in the single user data entry table, HisWord.

Unified Modeling Language (UML)

Class

The information which the author documents in this section of the paper; is the Data Declaration Language (DDL) and Data Dictionary, which is available at [Github.com/SQLServerDataDefinitionLanguagesDDL\\_Repository](http://github.com/SQLServerDataDefinitionLanguagesDDL_Repository). The Data Manipulation Language (DML) is too large to fit into the Github.com repository, and it is intellectual property. For the people that have access to the database, this private information is available by generating the database script.

Contact is a primary entity, and it identifies the people and organizations that the author has a relationship with. These affiliations are family, friends, business, or public service links. Also recordable are their street, e-mail, web addresses, and telephone numbers. The author stores the various information exchanges with these people. A known date of birth, is for notification of the subject's birthday and relative age. To keep up with the privacy and sensitivity of this personal information, the author is not sharing this highly confidential data.

The relationship between a contact and its related information is one-to-many; that is a contact may have multiple addresses. The other 2 types of relationships are one-to-one, and many-to-many.

A URI is a link to a web resource that will add to the audience's knowledge. The author notes the address and the date, when the author became aware of this information. The content at an address is either textual, audio, video, or image? For URIs, the author rarely explicitly specifies the entire http protocol and directory post-fix, /. An incomplete address will not validate as an input url type. The author only records the [Wikipedia](#) address' at the place of reference since it is easy to associate the title with the Wikipedia address.

Exists or does not exist? The transact-sql exists clause is useful for checking the existence of an object and if so, drop the object. This is applicable prior to re-creating the object. Please note that the metadata information is lost and the create or alter statement supersedes this approach. The exists clause is also useful in queries for determining the existence of a resultset.

These classes are important asset for the anniversary triggers; in the Remember entries.

Database and Application Server Source Files

The author chose a multi-tier architecture for building the application. The database layer is made-up of tables, views, stored procedures, functions. The database tables are easily storable and movable to other storage media. The SQL Server's data definition language (DDL), now supports Date2, and its date range extend between January 1, 1 CE through December 31, 9999 CE. Some dates in [Wikipedia](#) mention these dates. The HisWord\_view contains computed columns, which depend on entries in the HisWord table. The author extracts database information by building query statements.

The application layer is the bridge between the user interface layer and the database layer. The application layer compiles into a single [Dynamic-link library](#) (DLL), called InformationInTransit.dll. The application layer consists of four namespaces, namely, InformationInTransit.DataAccess, InformationInTransit.ProcessCode, InformationInTransit.ProcessLogic, InformationInTransit.UserInterface. What the author builds on the server; is accessible to all the clients. What is the lifetime of this code, and what neutrality does it endorse? The author started out with [dBASE II](#). The lines of code for the application layer are in the C# and embedded SQL.

Client Browser Source Files

- [HTML 5](#) (.html)
- [JavaScript](#) (.js)
- [Cascading Style Sheets](#) (.css)

The HTML files will work in all browsers; that support AJAX. Most of the interactive web pages are reliant on JavaScript to work, mainly because they use Ajax to interact with the server. Each HTML file, performs specific task, and may have a corresponding back-end associate, web service. The unobtrusive JavaScript file [9432.js](#) contains re-usable code that is not HTML files specific. The HTML files originally contained the CSS specifications; however, the author now places styling information in a single external file, [9432.css](#). This will reduce the sizes of the HTML files, and it helps to achieve a consistent user interface.

The work of the author is interactive, and there are links to questions and answers pages. Most of the input entries are textual, but some are numeric, datetime, select options. The answers are mostly in tabular format.

(Vibhav Verdhun).

A HTML document contains

- Text content: The author informs the reader by describing His word.
- References to other files: The author refers to external files, such as UML images.
- Markup:
  - Elements: The anchor tag is the most specific.
  - Attributes and Values: The author benefits from the introduction of the customizable data-prefix attribute.

(Elizabeth Castro).

Cascading Style Sheets (CSS)

- Base Rules: A base rule is an element and not a class nor ID selector. The author does not use CSS Resets. The author issues element selectors for the html, body, table and row.

- Layout Rules: There are no layout rules, such as header nor footer.
- Module Rules: The table of content (TOC) is for page navigation that the author offers using class names.
- State Rules: A state rule is for toggling, such as using Javascript to set the visibility.

(Jonathan Snook).

### Web Services

There is standardization on the first .NET web services architecture, ASMX.

(Frederik Bulthoff, 2019) In most cases, there is a one-to-one mapping between the HTML, ASMX, CS files, and the database relational table, Biblio. Scripture. For simplicity and clearance of use, the HTML and ASMX files, support one operation. GetAPage.html is the workspace for word utterances. GetAPage.html will send AJAX requests to multiple ASMX files and operations. GetAPage.html is a cumulation of separate HTML files. All the web services files support the SOAP request format and return JSON. JQuery accepts the POST, HTTP verb. The author strangled the data he passes to the web service in the body of the message. Errors are unforeseen, in the rare case, the author logs errors on the back-end, and display quantitative message. Security is lacking; this is permissible, since the author only queries information. The web service code, .asmx, file is not necessary, does not have a place, when there is no server database access ( [Sampey 192-2](#) [Cheniches 153](#), [John 15-25](#), [Romans 2:12](#), [Romans 3:21](#), [Romans 2:28](#), [Romans 7:8](#), [Romans 7:23](#), [1 Corinthians 9:21](#), [Hebrews 9:22](#) ). The Web Service Description Language (WSDL) is available, for example, by specifying the URL, [AlphabetSequenceWebService.aspx?WSDL](#). To generate a proxy code, issue the following command, `wsdl.exe /language:CS /namespace:InformationalTransit.ProcessingLogic /out:"AlphabetSequenceWebServiceProxy.cs" http://localhost/wordengineering/wordunion/AlphabetSequenceWebService.aspx?WSDL`. The Web Services Discovery Utility (disco) command: `disco.exe "http://e-comfort.epraintech.com/wordengineering/wordunion/AlphabetSequenceWebService.disco"` will generate the companion files, `AlphabetSequenceWebService.disco`, `AlphabetSequenceWebService.wsdl`, and `results.discardump`. A lecture of our beginning, (Hafida Na'im, 2016) The business rule is storable and processable in C#, C++, source files. The dynamic link library (dll), is callable from everywhere. GetAPage.html computes AlphabetSequence from a simple logic, which is easily representable everywhere. The AlphabetSequenceIndexScriptureReference is retrievable from the Bible, using non-complex SQL query. The BibleWord and HisWord reference, requires substantive query. The Bible dictionary returns dataset from the local database. The author can not make a business decision, to go to a web service, to retrieve what is locally resideable.

### Database Size

The `usp_DatabaseLogSize` stored procedure is for determining the size of the databases data files; and it is available at [T-SQL to find Data Log Size and Other Useful information - SQL 2000/2005/2008/R2](#).

| Database Size   |            |         |           |        |               |
|-----------------|------------|---------|-----------|--------|---------------|
| Name            | Data Files | Data MB | Log Files | Log MB | Total Size MB |
| Bible           | 5          | 304     | 1         | 82     | 386           |
| BibleDictionary | 5          | 38      | 1         | 17     | 55            |
| WordEngineering | 5          | 138     | 1         | 1816   | 1954          |

### Database Standard

#### Database Design

1. The relational model is for storing information in tables.
2. The author normalizes data using Object-relational mapping.
3. All the databases are OLTP (Online Transactional Processing), not OLAP (Online analytical processing).
4. Avoid deadlock occurrences by not permitting user database updates.
5. All the transactions follow similar routes and sequences, and the author practices granularity with the locks.
6. Database updates are through stored procedures, which recognize and avoid the potential of integrity violation.

#### Database Security

1. The secretive web.config file contains the database access information.
2. The web.config file does not explicitly mention the user login name nor password.
3. Give access rights to roles, not to specific login identities nor user names.

#### Database Data Types

1. Choose matching data types between the database and application layers.
2. Only pick `varchar(max)` and `nvarchar(max)` as the data type, when it is essential to store large data.
3. Prefer the decimal type, when recording the amount in currency rather than using the float type.

#### Nullable Type

1. Consider defaulting textual data to empty string; instead of NULL.

#### Indexes

1. Database changes lags with indexes.
2. The field sequence in indexes should follow the frequency of usage.
3. When using a composite index, place a clustered non-unique index on the major column.

#### Naming Conventions

1. Overall, consistency encourages lowercase keywords. Keywords in lowercase are mandatory in case-sensitive programming languages like C# and JavaScript, but not in SQL.
2. Use Pascal casing for naming literals, such as, tables, columns, stored procedures and functions.
3. Use Camel casing for naming parameters and local variables.

(ABB Asca Brown Boveri)

### Performance

The web page components practice of the author, include:

1. Keep the count of web page components to a minimum
2. Specialize input entries by using the most simple and basic component
3. Reduce bloating by limiting the use of framework and library

(Stoyan Stefanov)

### Performance Suggestion

1. The most consistent id="resultSet" is usually for AJAX. The self-descriptive tags that do not influence the result normally do not specify IDs, this is left to the browser's decision.
2. Browsers place restrictions on the number of concurrent connections to a particular domain and the overall parallel connections. Consider spreading out the resources to multiple domains.
3. The author standardized on the .png image format because there are few colors.
4. In the year 2008, when the author tried to move away from html table layout styling, the rendering was anemic.

The Cascading Style Sheets (CSS) performance suggestions include:

1. Since, by default, CSS is a render-blocking resource, the author should take advantage of the critical rendering path with media types and media queries.
2. All the programming .html files refer to the common 9432.css file, except this ubiquitous 2015-10-23DoctoralDissertation.html documentation file which includes css.

The JavaScript performance suggestions include:

1. Make use of browser cacheable content delivery networks (CDNs). For example, <http://code.jquery.com/jquery-latest.js>

(Lam Callender Hogan)

### High Performance Browser Networking

For Internet connections, the contributing factors include:

1. Propagation delay - The consideration is the speed of light in the medium of transport. On the Internet the speed varies according to the medium which may be (DSL, cable, fiber) in order of performance. The speed of light, which was presumably constant, but now, may be declining. The author chooses the most accessible route. Typically, working within the confines of a building. This research excludes other participants. The environment is transplantable for other uses. The route and environment impose limitations on the local host. The `traceroute` command on the Linux operating system, or the similar `tracert` or `pathping` commands on the Windows operating system, will give travel speed. The author will look into the last-mile tendencies of the Internet Service Providers (ISP) in the area. The receive window (rwnd) of the server should be adequate, since the users do not upload videos nor images.
2. Transmission delay - The time to input the packet into the link, which is determined by the length of the packet and the data rate of the link. On the author's behalf, the Bible book ID is transmitted to the client and convertible to the title by JavaScript. Formatting is done by the client.
3. Processing delay - The duration of processing the header, detect bit-level errors, and determine the other end. In an Intranet environment, this is done locally.
4. Queuing delay - The processing wait time is dependent on the browser supporting multiple page tabs, and other applications using the network?

Most of the work of the author is available at the following locations, in the order of accessibility:

1. The current web page, such as, 2015-10-23DoctoralDissertation.html file
2. The general Cascading Style Sheet, 9432.css file
3. The general JavaScript file, 9432.js file
4. The specific Web Service file, such as, ScriptureReferenceWebService.aspx file
5. The dynamic link library file, InformationalTransit.dll file
6. The database

The reason for noting this observation is that the Domain Name System (DNS) lookup time is low; since the author uses relative directory addressing as much as possible and only uses root addressing for calling web services. The .html and .asmx files are in numerous directories, because GitHub.com directories have content count limitations.

- Images:
1. The author does not use background-image nor list-style-image
  2. The thesis only contains images for database and object modeling
  3. The author does not use CSS `margin`; since it requires additional storage space
  4. The author does not use Data URIs
  5. The author does not support nor take advantage of Expires Headers
  6. This research excludes compression and minification; because the file sizes are low and technology conformity

(Ilya Grigorik)

Web Performance 101 JavaScript:

1. The author will not consider minification. Because he cannot justify compressed file duplicate mix-up. A single compressed file is less readable and maintainable. An automated build and deployment process may suffice.
2. DOM chattiness? The author currently builds the entire table, and he sets the `innerHTML` of the div. For faster visibility, the author may build a table by first setting its header, and appending rows.
3. The author should take advantage of the `async` script parameter. Because the actions of the scripts are invoked after the page load.
4. Code splitting with import serves well for web components and rare tasks.

Web Performance 101 Cascading Style Sheets (CSS):

1. Critical CSS is in the style sections of HTML files.

Web Performance 101 content delivery network (CDN):

1. The author is deprecating the use of the jquery library which was solely used for AJAX, in preference to the `fetch` statement. 2025-12-10T21:02:00 This removes single point of failure (SPOF).
2. The author only uses the latest version and a unique uri for each library available on CDN.

(Ivan Akulov)

```

Backup and Off-site Storage

The author archives the database and source files to the local computers, [Google](#), [Microsoft](#) drives, after changes. The author uses [Github.com](#) version control.

Development Time

The development time is separable into the time it takes to program, compile, test, deploy. The stored procedure, C#, ASMX, HTML files are build-able in one day, in most use-case.

Reproducible

The deliverable of the author is transferable to other environments to reach similar conclusions.

Database Deployment

The author suggests the following alternative methods for deploying the databases:

- 1. [Restore](#)
- 2. [Attach](#)
- 3. [Schema](#)
- 4. [SQL Server Data Definition Language \(DDL\)](#)

Surrogate Keys

The author takes advantage of potential natural primary keys; otherwise, the author uses surrogate keys. A surrogate key may be an identity or GUID type column. URLs are examples of natural primary keys.

(Joseph Sack, 2008)

Application Programming Interface (API)

- The common url scheme, endpoint, that the author prefers for security reasons is <https://c-comfort.github.io/WordEngineering>
- The Top Level Domain (TLD) is the same for both the website and the API, thereby allowing for sharing of cookies.
- Content Located at the Root: The practice of the author is to place the website and their companion API files in the same directories, as they are joinable. The author will not uniquely treat API files. The author makes a case for directory browsing, and there is a special help documentation file.
- Microsoft released ASP.NET MVC on December 10, 2007. <http://stackoverflow.com/questions/41906110/decimino-rest-api-endpoints-path-params-vs-query-params>
- Out of the Create, Read, Update, and Delete (CRUD) 4 operations, the API only supports the HTTP read, SQL select statement.
- Filtering Resources: SQL offers a column list, where, top, limit, and order by clauses for matching data.
- Body Formats: The load penalty in XML outweighs the newness of the JSON transport medium.
- HTTP Status Codes: JQuery satisfactorily handles the success or error of an asynchronous operation.
- Expected Body Content: Each API may currently return either a dataset, datatable, or a top level JSON object. The URI database is maintainable via a Patch request type to update a particular record's subset of fields/columns.
- Surrogate: The progress includes:
  - Migration to computed columns
  - Normalization
  - Naming Conventions, SQL for example, is generally case agnostic

(Consumer-Centric API Design)

Data Structures and Algorithm Analysis

The exact-match query is to search for a single Bible book, chapter, or verse. In the case of a verse, the top 1 clause is appropriate to efficiently return a single record. The range query is to search for information within a boundary.

The Remember table's ResultOutputFirst bit column is a rare Boolean datatype. It is for documentation purposes and it says the FromUntil period is known and it is used to determine either the FromDated or UntilDated column.

An identity column is a specialization of the integer data type, in that the database issues the next sequence. Most of the tables make use of the identity column as a surrogate primary key.

The aggregate or composite type attempts to store each particular type in its own table, when this is not optimum then normalization calls for several tables distribution joined within one view. The contact record is a single logical datatype spread to multiple physical implementations.

When the author hears a word, what does he do with it? He dates the word, he expresses it grammatically, and he finds a place for it in his memory. For a later date, the author reminds himself.

Problems, Algorithms, and Programs

Problem

When we hear the word, how do we endeavor in Him?

Function, Input, and Output

The input is the word as the only parameter. The output will find meaning in the word of God. The response of the computer is within the range of the result set.

Sets and Relations

The alphabets and words make-up the author's work. The composition of the words is indefinite.

- The ASCII table set composes 26 upper and lower case alphabets. Their places will originally decide the AlphabetSequenceIndex.
- The digits and their larger representations of numbers are also in the ASCII table. These are computable in determining the AlphabetSequenceIndex.
- The null character is in the Word column, when there is only commentary.
- Cardinality: Microsoft SQL Server places a limit on the maximum size of a VARCHAR column type, 8000. When there are 2 or 3 words, the author does further computation.

Asymptotic Algorithm Analysis

The computer serves the author in due time. The size of the users' input, the number of users, and the complexity of their requests will weigh on the system.

This is the approximation measurement of how long it should normally take to determine the AlphabetSequenceIndex. The prediction is the length of the word multiplied by the average period taken to determine the place of each alphabet. The growth rate is that the processing time increases, as the size of the input grows. There is linear growth, since the growth rate is constant.

Best, Worst, and Average Cases

There is no variation in time for determining the AlphabetSequenceIndex and AlphabetSequenceIndexScriptureReference. The size of the word will influence AlphabetSequenceIndex, but this should not be noticeable. When parsing and retrieving scripture reference and Bible word, there may be size and time differences.

Calculating the Running Time for a Program

The author uses a for loop to calculate the AlphabetSequenceIndex.

```
var alphabetSequenceIndex = 0;
word = word.TrimUpper();
var ascIIA = 65;
for
(
    var index = 0, lengthSize = word.Length;
    index <= lengthSize;
    ++index
)
{
    if (IsAlpha(word[index]))
    {
        alphabetSequenceIndex += (int)word[index] - ascIIA + 1;
    }
}
```

The cost of executing the for loop is O(word.LengthSize)

Lists

One of the few occasions that the author uses a list is when building the Exact table. The author creates a list of words and stores this transient information in memory. The author checks the existence of each word in the list. When it is a new word, the author appends it to the bottom of the list. Otherwise, the author increments its occurrence. At the completion of parsing the words, the author stores the list in a database table. Creating the exact table is a one-time operation, and it takes a couple of hours to complete. The author is comfortable and familiar with using datasets and datatables for work areas. The author uses JSON as a transport medium.

(Clifford A. Shaffer)

A generic grouping of concepts and their representation

| Module                        | Unit                       |
|-------------------------------|----------------------------|
| <a href="#">GetAPars.html</a> | retrieve(AlphabetSequence) |

| Module                          | Unit                                                                |
|---------------------------------|---------------------------------------------------------------------|
| AlphabetSequenceWebService.aspx | Query(word)                                                         |
| AlphabetSequence.cs             | ID(word)                                                            |
|                                 | ScriptureReference(int alphabetSequenceIndex).                      |
| DataCommand.cs                  | DatabaseCommand()                                                   |
| WordEngineerSchema.sql          | WordEngineering.dbo.udf_AlphabetSequenceIndexScriptureReference(ID) |

(Joost Visser)

GetAPage.html Program Flow

The event handlers are the first code the system executes. These are the page load, submit click, item change events. If this is a page load event, and it is not a [postback](#), and the [query string](#) has a word argument, then the processing of the word occurs. If this is a postback, then it is the user's data entry that the system processes. The term processing means the browser submits the word to the back-end asynchronous web services and renders each result.

International Standard ISO/IEC 25010, Systems and Software Engineering – Systems and software Quality Requirements and Evaluation (SQuaRE) – System and Software Quality Models. First Edition, 2011-03-01.

Software quality is demonstrable in eight characteristics: maintainability, functional suitability, performance efficiency, compatibility, usability, reliability, security, and portability.

Maintainability

Corrective Maintenance

This is error correction.

Adaptive Maintenance

Transition from building console to web applications.

Perfective Maintenance

The author now considers partial and lookback scripture references. Such as, when there is no book title, then this default to the earlier book title. Choosing the right [.NET Framework Data Providers](#). The author standardized on ODBC; the other choices are OLE DB, or SQLClient.

Preventive Maintenance

Servicing the system to avoid larger mishaps.

Metric Quality Profiles

Unit Size Quality Profiles

| Module                          | Unit                                                                | Lines of Code |
|---------------------------------|---------------------------------------------------------------------|---------------|
| GetAPage.html                   | retrieveAlphabetSequence()                                          | 40            |
| AlphabetSequenceWebService.aspx | Query(word)                                                         | 10            |
| AlphabetSequence.cs             | ID(word)                                                            | 50            |
|                                 | ScriptureReference(int alphabetSequenceIndex).                      | 10            |
| DataCommand.cs                  | DatabaseCommand()                                                   | 90            |
| SQL Server                      | WordEngineering.dbo.udf_AlphabetSequenceIndexScriptureReference(ID) | 105           |
| Sum                             |                                                                     | 325           |

Determining the AlphabetSequence takes 325 lines of code, which starts and callbacks 40 lines of AJAX code and concludes with 200 lines of database interaction. A unit of code should not exceed 15 lines. All the web services (.aspx) files return JSON by default; the AlphabetSequenceWebService.aspx file, Query method, returns a hand crafted JSON which has a numeric AlphabetSequenceIndex and a string AlphabetSequenceIndexScriptureReference.

Limit the number of branch points per unit to 4

The C# compiler will translate code to an intermediate language (IL). This code runs Just In Time (JIT), according to the condition clauses and operators. In the case of dynamic SQL, re-compiling imposes cost.

The Twelve-Factor App

- Codebase: The WordEngineering application is storable in the [GitHub.com](#) version control with a one-to-one mapping between the codebase and the application. There are multiple but separate websites that access the InformationInTransit.dll. The author builds the InformationInTransit.dll in the developer's working directory, and deploys the InformationInTransit.dll in each production's website bin directory. The steps for storing files in GitHub.com are:
  - git status
  - git add
  - git commit
  - git push
- Dependencies: The web.config file identifies the .net library versions that the environment should contain. The third-party supporting libraries are in the software bundle.
- Config: The web.config file contains the database connection strings; web services user specific credentials. The system administrator at external locations may customize these information for there specific use.
- Backing services: These are external independent resources, such as the database, SMTP.
- Build, release, run: These are the stages that a code goes through. Code compilation is deferrable for scripting, as opposed to compilable languages. Ever since the advent of the Java programming language, Just-In-Time (JIT) execution has been the norm.
- Processes: The author's earlier applications were stand-alone console applications that are run by the .NET Framework, later examples are the ASP.NET web pages and services. These applications run in a single thread, except they share static variables. The SQL Server encompasses services which are stoppable to do data files backup.
- Port binding: Web servers traditionally run on port 80, and SQL Server runs on the changeable port 1433. Javascript's Node and Python's Flask run on diversified ports.
- Concurrency: The author isolate his applications from the particulars of the base scaling concurrency choice.
- Disposability: The author's take on expendable work includes the following:
  - Pure functions
  - On-demand compilation of web pages and services
  - Adjustable time-out setting for the database and web request threads
  - The .NET Framework minute work, such as, the singleton design pattern, and static method calling and variable(s) initialization
- Development/production parity: By first finalizing non repetitive work, the author can now focus on specialization activities.
  - The time gap: These include placing the common work in a central environment. Superseding the waterfall methodology with the more recent process, Agile and Scrum.
  - The personnel gap: Dev/ops expertise
  - The tools gap: The author prefers the stable infrastructure to the fly-by-night trends. Testing on the multiple operating systems and the various programming languages reflects the author's wish for compatibility. Prior to advent of the Internet, communication did not support a worldwide trend; therefore, the need for distributing scaling, that is remote applications depending on the source resources.
- Logs: The author logs exceptions, that is, viewable in the Event Viewer. The author displays error messages to the user, the .NET Framework determines the detail, and the localhost address offers in-depth peculiarities.
- Administration processes: These are one-off tasks that the environment demands or the knowledge worker. The tools are available everywhere for achieving the goal. Prior to graphical user interface (GUI), these are command-line responsibilities.

(The Twelve-Factor App)

Who, what, when, where, why?

Who

The author gives credence to the information source. Whenever it is possible, the author identifies the speaker. If the source is attributable to him, the author rarely explicitly identifies himself.

What

The primary contribution of the author is the word. The author draws upon the word of God and tries to derive meaning.

When

God gives most of His information in a dream, vision or face-to-face. How do people place date? On each day of the week ( [Genesis 1-2](#) )? Seniority comes first ( [John 1-15](#), [John 1-27](#), [John 1-30](#) ).

Where

The author refers to the physical location or scenery of participation.

Why

The endeavor of the author is to share the word.

Artificial Intelligence

Deep Learning

Utterances are storable in the Word column of the HisWord table. An expressible event is storable in the Commentary column. The information relay is the basis for more computation in the HisWord\_View and Remember\_View tables.

Machine Learning

Our entirety chiefly pertains to Him.

Multi-layer Perceptrons (MLP)

DataDifference.html is browser computation, built on JavaScript. The overall function calls particular functions for determining the days difference in the Biblical and Gregorian Calendar. DataDifference.aspx is a server-side C# ASP.NET web form. The Remember's table computed columns are Transact-SQL and SQL-CLR functions. Our computation is separable to back-end and forward-end code residence; SQL-CLR provides the opportunity to have functionality callable from both parts. Code re-use sounds good, but it is dependent on many fictions.

Features

He addressed time. Each information the author measures is a feature that the author appraises. The features are the words spoken and the events seen.

Factors of Variation

These are out of context attributes that influence the outcome. Outside the context of managing. Their influence is not determinable.

Depth of the Computational Graph

The author does ASCII code alphabet place summations. There is just not one result, but a set of alternatives; the user may select the most right. For example, AlphabetSequence, produces an index and a scripture reference. The depth in the case of AlphabetSequence is two, with the first result, index, acting as an entry to the second result, scripture reference. The index is an arithmetic calculation, addition; the second result, scripture reference, is a composition algorithm that includes determining the beginning and end span, for the chapter and verse.

Depth of the Probabilistic Modeling Graph

This checks the path to our succession, the thread between concepts. Earlier and recent entries are comparable. The earlier Bible versions serve as a resource for the later versions of the Bible.

Probability

Formerly, the HisWord's table primary key is its Word column, and in SQL Server the maximum size of a unique key is 900 bytes; therefore, the limit of its distinct entries is  $900 \times (2 \times 8) = 900 \times 256 = 1\,932\,334\,983\,228\,891\,510\,545\,406\,872\,202e+756$ .

| <div><div>This technology will make all the before and current versions of the code accessible, re-viewable, and testable.</div><div>All the words that the author hears while sleeping are recordable and the author has never had any tendency to alter this utterance from the LORD. When the author is awake and he says something, out of his own volition and pre-meditation, he has massaged this information, but now he rarely does so. The words in the past and future event dates are useful for remembrance entries. As the author technically matures, he automates manual work.</div><div>The dreams are re-collect-able, and recallable ( <a href="#">Numbers 12:6-8</a> ).</div><div>I have made what I have spoken, ready</div></div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <div><div>This is what I have done: this is what you will do. What did we understand as His part, what did we understand as our future? To reflect, My correlate. In an anchor, if there is no href attribute or its empty; then the browser should link to the default search engine as its destination and pass its innerText. Alternatively, when the user right clicks on a browser hyperlink, there may be a suggestion option for the search engine to re-direct to a specific web page or to list URLs as in a browser search. Supplementary information for a href attribute is meta-data and <a href="#">whois.com</a>.</div></div> <div>(Jakob Nielsen, 2000)</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

How will you wait on time as the period need? Callable unit. At Arthur Andersen/Warner Music, Electronic Data Systems (EDS) Westpac Bank and Macquarie Bank, he did not know when to go. When we look at the Bible, when does it start a new use-case by explicitly mentioning the beginning period of the occasion?

| Procedure, function or method call | Commentary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |            |                      |                                      |                    |                                    |                       |                                                                                           |                          |                                                                 |                  |                                                               |                    |                                              |                      |                                                                                                          |                    |                                            |                           |                                                                                                                                                                                   |

StringBuilder is preferred. | Constructor method | To create and initialize a class instance. | Constructor static method | To implicitly rely on the execution of a one-off method the first time the class is referenced. This is useful for initializing static variables and building a class collection. |

| Method overloading                 | Calling a method that exhibits the signature                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |             |            |                      |                                      |                    |                                    |                       |                                                                                           |                          |                                                                 |                  |                                                               |                    |                                              |                      |                                                                                                          |                    |                                            |                           |                                                                                                                                                                                   |
| Operator overloading               | Concatenation is an example of the string addition operator, +, overloading. StringBuilder is preferred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |            |                      |                                      |                    |                                    |                       |                                                                                           |                          |                                                                 |                  |                                                               |                    |                                              |                      |                                                                                                          |                    |                                            |                           |                                                                                                                                                                                   |
| Constructor method                 | To create and initialize a class instance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |            |                      |                                      |                    |                                    |                       |                                                                                           |                          |                                                                 |                  |                                                               |                    |                                              |                      |                                                                                                          |                    |                                            |                           |                                                                                                                                                                                   |
| Constructor static method          | To implicitly rely on the execution of a one-off method the first time the class is referenced. This is useful for initializing static variables and building a class collection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |             |            |                      |                                      |                    |                                    |                       |                                                                                           |                          |                                                                 |                  |                                                               |                    |                                              |                      |                                                                                                          |                    |                                            |                           |                                                                                                                                                                                   |

| Type                               | Commentary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wake-up orientation database table | This information is currently being interpreted textually. An image, and even more so, a video of the changes in position and direction when sleeping will offer better insight. For the visually implied, the less bandwidth-intensive text may still be satisfactory.                                                                                                                                                                                                                                         |
| Non-Alphabetic                     | AlphabetSequence may not be appropriate for people that use glyphs or sign languages.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Structured query language (SQL)    | <div>The proposed changes which will offer query customization?<ul style="list-style-type: none"><li>The author transitioned from a multi-column query to a single-line query which has a tendency to return more results because it is not particular. Context fine-tuning is a suggestion.</li><li>With search-engine queries, the author proposes a query-language. This potentially affords better resultset granularity restriction, arrangement option, and maturity of use compensation.</li></ul></div> |

### Data Science A Hands-On Introduction

This research largely deals with structured data that is put into a relational database. The word is easily associable with a table. The dated column is when the word occurs. The scripture reference column is the guide to the Bible. The columns contain numerical and categorical data. The numbers are the sequence and date columns. The categories are textual and these include the URL, location and scenery columns. Humans are familiar with the recording of information into tables. The [DatesComputation.html](#) is the first time that the author uses pairing data.

### How does the work of the author accompany the Bible?

The Terminology of Machine Learning in Relation to AlphabetSequence

| Term                                           | Meaning                                                       |
|------------------------------------------------|---------------------------------------------------------------|
| Training dataset or training set               | The recording of the word in the database.                    |
| Example (or data point, data instance, sample) | Each database row or record.                                  |
| Predict Label (or target)                      | The corresponding Bible text.                                 |
| Linearity assumption                           | The features alphabet places.                                 |
| Weight                                         | Since the word is the only feature, it is the only influence. |
| Bias                                           | A starting value.                                             |

### Object Oriented Programming - GetAPage.html

A type of us, is a kind of us? GetAPage.html is Bible specific.

### Parent Scripts and Objects

GetAPage.html contains the HTML5 directive, head, and body sections. The head section contains the title and meta tags for search-engine optimization (SEO). The 3 languages that make up a web page are in the following ascending order: CSS, HTML, JavaScript. HTML is an element's nodes. There are only single instances of the input and submit elements. There are multiple div containers for the result sets. Although HTML supports attributes, the ID attribute is the author's only general declaration. Both CSS and JavaScript act on HTML tags. JavaScript and CSS render the contents of HTML. There are minute uses of global variables. The author discourages this, because of encapsulation and debugging traceability and granularity.

### Naming Conventions

JavaScript relaxes variable declarations. Variables do not need explicit declaration, and these declarations are redefinable. In spite of this, the author is judicious about variables. The data- attribute is user customizable.

(LOOPE Lingo Object Oriented Programming Environment)

The author acknowledges positive bias in his work. Sometimes the author collaborates with what is said to him. The author may add reinforcement to his word. The author values the population average over the sampling average. For example, the Bible is complete, but the work of the author is on-going.

(Adam Kelleher)

## Elements

| Element                       | Commentary                                                                                                                                                                                                                                                                                                 |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Title tag                     | The maximum length of the title tag is 60 characters and it is shown on the browser's title bar or page's tab.                                                                                                                                                                                             |
| Meta Description tag          | This may be upto 155 characters and it indicates the page's content.                                                                                                                                                                                                                                       |
| Meta tags                     | The other meta names include keywords, robots and author.                                                                                                                                                                                                                                                  |
| Heading tags                  | H1...H6 with H1 being the most important.                                                                                                                                                                                                                                                                  |
| Textual content               | Search engines predominantly optimize for text. Other media are larger in size and duration. <a href="#">When did He promise generational growth? ( Psalms 22-30, Genesis 3:15, Genesis 12:7, Genesis 13:15, Genesis 15:13, Genesis 15:18, Genesis 17:8, Genesis 24:7, Genesis 26:3-4, Isaiah 53:10 )?</a> |
| Alt attribute on the img tag  | Visually impaired people have difficulty comprehending images.                                                                                                                                                                                                                                             |
| Fully qualified links         | Relative links meet the author's requirement, since is hostable on external sites.                                                                                                                                                                                                                         |
| Sitemaps (both XML and HTML.) | A sitemap documents the files and their relationships.                                                                                                                                                                                                                                                     |

| Dated               | Word                        | url                                                                                                                                                                                                                                                                                                                                                                                                         | Alberto Cairo definition                                                                 | Person quoted                                       | Person quotation                                                                             | Commentary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

(Alberto Cairo, 2026)

2026-05-17T15:36:00 What did he collect as a future?

1. 2026-05-16T07:26:00 Scripture references uttered to you.

What is best believable ( Deuteronomy 13:3 )?

I am not asking You to take my word as Yours, I am asking You to change my word as ours ( Numbers 3:12, Numbers 3:41, Numbers 3:45, Numbers 3:46, Numbers 8:18, Acts 10:9-16, Romans 2:25-29, Colossians 2:11, 1 Corinthians 7:19, Galatians 6:12-13 )?

- In the HisWord table, the order of belief is:
  1. Scenery
  2. Commentary
  3. Word
  4. System generated: DateTime and identity columns
  5. Association columns: ScriptureReference, ContactID, URIThe author is an authority on the HisWord table.
- SQL script generation, sql, is better than Microsoft SQL Server backup, .bak. Text is more factual than video.

2026-05-14 Inconsistency —

2026-05-14T21:42:00 The author has used different source from composing his work.

2026-05-14T21:46:00 How we are... in the midst... of each other.

- AlphabetSequenceIndex language? The author does not make a distinction between the English and Yoruba alphabet sequence.
- Word of the author versus Bible versions — The correlation between the word of the author and the Bible differs and varies between the versions of the Bible.
- Dictionary — The author refers to dictionaries from multiple sources.

(Alberto Cairo, 2006).

2026-05-10T14:05:00 What exact... has He notice... about you?

1. 2026-05-10T14:05:00 Re-locate:
  1. Prior to 1988-10-15 First dream:
    1. Am taking you on a journey.
  2. 1998-05-08 Last word, before re-locating from Australia to the United States of America (USA). Face to face: Out of Egypt, have I called My Son ( [Isaiah 11:1](#) ).
  3. 1999-05-07 First word, after re-locating to the United States of America (USA). Face to face, in the wardrobe, closet, of the master bedroom. He cyan mi lon lo yi. It is my person you are going to.

2026-05-07T17:49:00 Word rank

1. [They were inspired by the spirit... to talk as the spirit.](#)

2026-05-06T11:52:00 HTML tags Unordered List Versus (VS) Ordered List

The difference between the ordered list tag, ol, and the unordered list tag, ul, is not enormous... to deserve 2 separate tags. An optional... style of numbering attribute will suffice... which may have a default. The ordered list tag already has a type attribute.

2026-05-05-07T12:22:00 How can he... be... like us?

1. [I have always drifted toward the academic.](#)

2026-05-02T21:30:00 Could I re-write this... biblical?

1. Power of the Holy Spirit ( [2 Peter 1:21](#) ).

2026-04-27T16:01:00 WordEngineering query

1. WordEngineering query - database  
Structured Query Language (SQL) specification parts include the select column list, where filter restrictions, and order by sort.
  1. Select column list: There is no universal standard for arranging the user-interface (UI) column names. The author displays the name of each person, title, organization name, and contact details.
  2. Filter restriction: A user may choose to return a large data set, or minimal data set. For example, contacts are query-able by their full names or their partial names — first name, other name, or last name. When a user knows the full name, this is the advised query filter. The last name is preferred over the first name since it is more cultural and regional specific, and it should return a lesser dataset. The first name is traditionally Anglo-Saxon, and it is probably a shortened version of their birth name. The author does not pre-select options.
  3. Order by sort: Sorting may be in either ascending or descending order. It is achievable either on the server-side, database via SQL, or the client-side, user-interface (UI) via JavaScript. The limitation of the current implementation is to sort numbers by ASCII digits, and not quantity, since the author does not specialize in each display by customizing datatype distinctions.
2. WordEngineering query - client  
Technology include Document Object Model (DOM), XML/XSLT, XPath, XQuery.
  1. Query arguments are passable to each client user-interface (UI) via hyperlinks or browser-specific address lines. Each form may also provide query options. The author makes all effort to provide reasonable defaults.
  2. Navigation: The ID attribute provides a document-wide unique identifier for an element. 2026-04-27T17:43:00 The author conforms by the Pascal notation.
  3. 2026-04-27T18:19:00 Find is useful.

2026-04-27T19:49:00 To know at the start... what I Am?

1. When I started Kowe, I was a deported Yoruba man.
  - 2026-04-27T19:59:00 This I will find useful... for my people.
  - 2026-04-27T20:13:00 I could use the computer... for my weakness.
2. When I started AlphabetSequence... 2026-04-27T20:22:00 I must find... for what... He accumulated in the past ( [Genesis 15:5](#), [Revelation 16:12](#) ).

2026-04-28T08:53:00 How you are known... by them?

1. The titles of God, and their translations ( [Genesis 16:13](#) ).
2. The identification of His creation. For signs, after death, substitute, beginning and end ( [Hebrews 9:17](#) ).

2026-04-15T05:43:00 Feature highlight its strength and weakness?

Passover: 2026-04-02, 2027-04-22.  
Feast of Unleavened Bread: 2026-04-03, 2027-04-23.  
2026-04-15T05:23:00 I went to a man in the south-west quarter, and I took from him, 1 piece of fish, and 1 piece of meat.  
Implementation options include parsing a data definition language script file ( [SQL](#) ), or interrogating the database schema.

- Cross-check that all the tables and their columns have documented entries in the data dictionary, meta-data.
- For the tables which have parent-child relationships, master-detail, make sure there are corresponding views. To determine the affected tables, check for the existence of primary keys which contain composite columns, and primary keys and foreign keys with referential integrity which protect against orphan. Suspect tables include the PurchaseOrder and PurchaseOrderItem related tables, and the Contact and its subordinate address tables.
- 1. 2026-04-15T07:42:00 Make sure that the projected and potential primary columns are not nullable, and have defaults.
  - 2026-04-15T07:44:00 Natural primary key columns.
  2. 2026-04-15T07:46:00 These are, for example, ID identity or sequential, and dated timestamp columns.

2026-04-09T18:48:00

[How we repeat life?](#) ( [Matthew 24:34](#) )

1. Old Testament: Kweo, birth, sacrifice, death, worship ( [Genesis 4](#) ).
2. New Testament: Worship, circumcision, baptism ( [Matthew 11:11](#) ).

2026-04-08T20:13:00

[How elaborate... is the view... of my participation](#) ( [Daniel 2:45](#) )?

1. 2026-04-08T20:13:00  
[How reliable is the machine... in interpreting the word of God?](#)
2. 2026-04-08T20:34:00  
[What did he find... as useful as the present?](#)

2026-04-07T08:21:00 I gave testimony to my biological mother about dreaming her, and Pastor Bert Bain chastised Brian, a Caucasian churchman elder who was married to Fatu, an Islander nurse. I remembered the circumcision of Abraham's only son, Isaac, as an explanation for Akelah.

  6. The way the truth and the life ( [John 14:6](#) )
  7. 2012-01-01 Pastor Andrew Huang, John 15. The "I Am" of Jesus. I Am the true vine, and My father is the husbandman. Remain in Me. Abide in Me. If you remain in Jesus, you can not help, but bear fruit. Scripture reading: If My words, remain in you. Prayer: Ask what ever you wish. Obey: Obey what the bible says, as the Holy Spirit leads you. Expository ( [John 15:1](#) )
2. 2026-04-05T23:06:00  
My twin sibling cooked, and he served me pounded yam translated to iyan in the Yoruba language, okra translated to ils in the Yoruba language, and stew.  
My twin sibling also offered me a 99 Ranch Market food voucher, light green worth \$2, redeemable for purchases in the hot stove, and the in-house bakery.  
The word came as I brushed and I guggled my teeth in the upstairs, north-center, bathroom.  
[Begin as Me, and you will end as Me](#) ( [Matthew 2:1-2](#), [Micah 5:2](#), [John 3:3](#), [John 3:5](#) ).  
2004-07-18 Andrew Leon Mekko of Family Life, Campus Crusade for Christ preached at Christian Layman Church.  
2004-07-18... 2026-04-05-7901 days (21 biblical years, 11 days) (21 years, 8 months, 2 weeks, 3 days)  
3. 2026-04-05T04:23:00 The instinator of a new covenant, versus (VS) The mediator of a new covenant ( [Hebrews 9:15](#) )  
4. And about the ninth hour Jesus cried with a loud voice, saying, Eli, Eli, lama sabachthani? that is to say, My God, my God, why hast thou forsaken me ( [Matthew 27:46](#), [Psalms 22:1](#) )?  
5. My Father versus (VS) My God.  
5. Paschal Lamb ( [John 13:3](#), [John 1:29](#), [1 Corinthians 5:7](#) )  
2026-04-05T11:02:00 Scene 1: We were inside a room, and either in the center-west or north-center, we discovered some missiles belonging to a party were stolen by a third party. I was distracted by this theft. Scene 2: Uncle Demola, who was standing in the south-center, confessed that he had taken some agricultural farming produce, which were probably leaves, flowers or seeds prior to their harvest for their safety ( [Genesis 3:20-24](#), [Genesis 4:16](#) ).  
2014-08-18 Stay the course dream of Chuck Messler, 2014-08-18... 2026-04-05-4248 days (11 biblical years, 9 biblical months, 18 days) (11 years, 7 months, 2 weeks, 4 days) 2025-10-25 ( [James 3:4](#) ).

| Percent (%) | <a href="#">RubbPercentage.html 1AmSecurityPercent%05hcof4Amsh4AFi.htm</a> | and there died the third part of the creatures which were in the sea, 'even' they that had life; and the third part of the ships was destroyed ( <a href="#">Revelation 8:9</a> ). |

- 2026-03-27T19:30:00 [What did I relate to as the usage?](#)
- 2026-03-27T19:49:00 [As long, as you are with us... we have... each of us](#)

1. My love poem, inspired by Lisa Munoz, at speech communications classmate, was probably written within a few minutes at Central Piedmont Community College (CPCC), Charlotte, North Carolina (NC), in the personal computer (PC) laboratory with 2 editors. Kove was programmed within a few days at Gestco, 34 Association Avenue, Ilupeia, Lagoa, Nigeria. I require a C language compiler, Tagged Image File Format (TIFF), English and Yoruba alphabets, dictionary and translator, graphics monitor mode, 2 lines per editing.
2. Alpha-beta sequence is a divine-inspired algorithm, and it requires a relational database with support for Structured Query Language (SQL) input and query, C# application layer, and HTML, CSS, and JavaScript for the user-interface (UI).
- 2025-03-28T11:45:00 is *Divine*, since 2002.
- 2026-03-27T23:34:00 *To retain... a part of myself... as the other.*
  - 2025-03-28T11:45:00 *When did he personally relate who he is... to who he has been?*
  - 2026-03-28T11:30:00 *Look at what He want to say through you... perce what He has to say through you.*

## Perceive our world

1. A relational database stores data in rows and columns. The columns supports storing specialized datatypes. A primary key is for uniquely identifying a particular row. A foreign key offers the opportunity to associate rows of the same values.
2. Object-orientation is for combining data and programming logic. A collection or list of objects.
3. The Bible is a history of the Jewish people.

## Time Series Analysis

1. 2026-04-03T14:22:00 This is a sampling of the word of God.
2. 2026-04-09T19:52:00 The author would like to place more emphasis... during nighttime dreaming at the Pacific Standard Time (PST).
3. 2026-04-09T20:20:00 Who must be... [marcas@yale.edu](#) [Joshua 14:8](#) [Joshua 14:2](#)?

## 2026-05-03T15:49:00 Handling Missing Data

The author started receiving word from God shortly prior to his 21st birthday, which was coming up on 1988-10-15. But, the author did not start writing a blog until at about 2000-10-05. The author started using a database for data entry, and the author commenced AlphabetSequence at about 2002-12-03.

2026-05-03T15:49:00 [The greatest length](#)

1. The author was incarcerated at the Alameda County Santa Rita Jail, 5325 Broder Boulevard, Dublin, California (CA), (925) 551-6500, 2nd occasion between 2028-03-07T00:00:00..2028-03-14T00:00:00  
2. 1. 2004-05-26T00:00:00 The author was hospitalized initially at the John George Psychiatric Pavilion, 2060 Fairmont Dr, San Leandro, California (CA) 94578, (510) 346-1300.  
2. 2004-12-06T00:00:00 And, subsequently at Villa Fairmont Mental Health Rehabilitation Center (MHRC), 15200 Foothill Boulevard, San Leandro, California (CA) 94578, (510) 352-9690.  
3. 2026-05-03T17:42:00 Information record is intermittent during trips.  
4. The computer malfunctions, and specifically, the hard disk of the computer fails; therefore, resort to restore database.

### Group by Testamen

1. Pentateuch: The Old Testament starts with the 5 books of Moses.
2. Gospel: The New Testament starts with the 4 Gospels of Jesus Christ books

## Group by HisWordII

2026-05-04T18:05:00 The HisWorld column is for group of simultaneous words...most likely, that were spoken on the same dates.

2026-05-04T07:23:00 The Nigerian government versus (VS) Microsoft dispute over sexual intercourse between eligible Microsoft-affiliated females and mediocre Nigerian male partners. I saw 2 Microsoft affiliated females beside a car in the north-center-west. In the center-west, I attempted to give a Microsoft-affiliated female my business card, but she did not receive my business card, because there is no job ([Hebrews 11:2](#)).

2026-05-04T12:23:00 I re-located to the United States of America (USA) in my sixteenth, 16th, and thirty-second, 32nd, years, 1983-12-29, and 1991-01-18, respectively ([Luke 16:16](#)).

(Aileen A. Nielsen, 2020)

2025-03-17T11:47:00 [Side with church... or side with the children \( John 7:51, Genesis 21:9, Genesis 27:41 \)](#)

2025-03-22T17:52:00 Nullable column lifecycle? [How I bring about... a re-use](#)

The `is distinct`, `supplements is null`, and `is not null` variables come from primary keys, and unique constraints and indexes restrict table rows and columns. Foreign key constraints restrict related table rows and columns. Efforts must be made, when enforceable, to guide the user interface (UI) for client-side and server-side validations on mandatory, and so-called required constraints.

- Structured Query Language (SQL) Insert Statement: When the value of a nullable identity column is not specified in an insert statement, then the database will generate the next continuous number. Microsoft SQL Server `@id=identity value` will reflect the value of the server's next generated identity column.
- Structured Query Language (SQL) Select Statement: When the value of a nullable column is set to null, then an outer join is required to retrieve foreign-related rows.

### Data Attribute

2025-03-23T21:10:00 He has used data attributes for a long time now. But he has used it for documentation. How could it provide programming functionality?

- **data-webservice:** An invocable web service to provide supporting information. Via a web address, url and query string.
- **data-code:** With the option of running the code? XML or JSON format, with language extensions that enforce compatibility and interoperability. 2025-03-24T12:42:00 For example

```

SELECT
  'Alpha' AS InfoType, COUNT(*) CountInfo,
  (
    Count(*) * 100.0 / (SELECT COUNT(*) FROM WordEngineering..Hisord
  ) PercentInfoTotal
FROM WordEngineering..Hisord where Word NOT LIKE "E@-@]"
UNION
SELECT
  'Numeric' AS InfoType, COUNT(*) CountInfo,
  (
    Count(*) * 100.0 / (SELECT COUNT(*) FROM WordEngineering..Hisord
  ) PercentInfoTotal
FROM WordEngineering..Hisord where Word Like "E@-@]"
UNION
SELECT
  'NALL' AS InfoType, COUNT(*) CountInfo,
  (
    Count(*) * 100.0 / (SELECT COUNT(*) FROM WordEngineering..Hisord
  ) PercentInfoTotal
FROM WordEngineering..Hisord where Word IS NULL
UNION
SELECT
  'Total' AS InfoType, COUNT(*) CountInfo,
  (
    Count(*) * 100.0 / (SELECT COUNT(*) FROM WordEngineering..Hisord
  ) PercentInfoTotal
FROM WordEngineering..Hisord

```

- data-ssn: For example, Representation State Transfer (REST)

| Word | Ocean Senior | www.JesudnThet.amb.com | From... until |            |                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

To:  
Subject: Your SQL Server background caught our !! -- 18-20 hrs/week, you set the pace

Hi Ken,

SherlockTalent is hiring on behalf of an esteemed client:  
■ SQL Server DBA & User Support Specialist – 1800 Remote – Hourly contract, flexible  
- Job #: 7369  
- Location: Remote (English speaker)  
- Type: Part-time Contract (est. 18-20 hrs/week, flexible scheduling)  
- Rate: Hourly, commensurate with experience

If you're a seasoned SQL DBA who wants meaningful hands-on work without the full-time grind, this one fits.

What you'll own:  
- SQL Server administration: schemas, permissions, stored procedures, index optimization  
- Database documentation and visual architecture diagrams (Visio or equivalent)  
- User access governance – provisioning, auditing, least-privilege enforcement  
- End-user support: query troubleshooting, reporting validation, access issues  
- Regular status updates and risk flagging to the fractional CIO

Why this role:  
- Pure execution – no enterprise politics, just solid DBA + support work  
- Full remote flexibility with a schedule you control  
- Bonus points for Azure SQL, SaaS, or Power BI data source experience

Not for you? Sherlock loves to share \$1,000 Referral Success Bonuses! Send referrals to [referrals@sherlocktalent.com](mailto:referrals@sherlocktalent.com).

2025-12-20T21:42:00 Building a UI Framework

2025-12-20T21:42:00 Application architectures

The author follows a multi-tier client/server architecture. Each unique browser client HTML web page, features a JavaScript, .js, fetches an AJAX request to an ASMX web service, which calls the application layer .dll written in C#, .cs, and this finally sends a SQL to the database server.

2025-12-21T21:45:00 Ephemeral Applications

1. Server-side rendering (SSR): The server initially generates a static user-interface (UI) input form based on an HTML document. This facilitates a fast page load time.
2. Client-side rendering (CSR): By using JavaScript, the client requests an input data-driven dynamic JSON from the server, with which it later builds its specialized HTML result set fragment.

2025-12-22T18:12:00 What is a UI framework?

- Widget libraries: The author primary uses pairs of labels and inputs; submit button; and rarely select, and radio controls. Although the author has experimented with the Microsoft ASP.NET link button, in the past, it is no longer a utensil, since it depends on the availability of JavaScript.
- UI description: The domain-specific language (DSL) that the author now favors is HTML, but he initially, adopted XML/XSLT.
- Layout: For backward compatibility, the author still relies on the HTML table as his layout manager.
- Focus and focus traversal: The author bothers to set the default 1st row and 1st column entry to the autofocus attribute, but the author defers the sequential tab order, tabindex = -1 Element will not get focus.

2025-12-25T20:40:00 Role of adopter

- 2025-12-25T17:37:00 Author: His work began by sharing examples of words pertaining to Biblical passages and figures in HTML format. 2025-12-25T17:42:00 Each HTML document was based on a word. 2025-12-25T17:45:00 These stories rarely imply living people's biographies or testimonies.
- 2025-12-25T17:54:00 Data Science: The author records each precise word received in a relational database in a particular location — HisWord table, Word column. The surrounding related information is inferred and subjective ([Matthew 16:23](#)).

2025-12-25T21:46:00 Time to first frame

When did He define His rule ([Genesis 18:19](#))?

1. Time to first paint: HTML presentation
2. Time to interactive: JavaScript generation of Document Object Model (DOM)

[GetAPage.html](#) Sub-divisions

1. AlphabetSequence
  - [AlphabetSequence.html](#) is the sum of alphabet places, and the separation of the Bible into chapters and verses.
  - [AlphabetAndTraining.html](#) AlphabetSequence languages.
  - [AlphabetSequenceGrammar.html](#) is for AlphabetSequence, and specifying the Bible sections.
2. [Bible.html](#) supports specifying the combination logic (and or, plusus). 2025-12-21T11:03:00 [Also, restrictions can be placed...](#) on the various divisions of the Bible. Parts of speech are ignorable.
3. [BibleDictionary.html](#) 2025-12-21T11:16:00 will retrieve meaning of the words.

2025-12-03T22:38:00 To be reciprocal... of the value?

1. [http://crbse.com/2025/12/03/stock-market-of-crash-risk-black-monday-october-1987.html?utm\\_source=firefox-news&utm\\_medium=video/2025/12/03/former-treasury-sec-robert-robin-on-markets-october-1987-like-risk.html](#)

| Layman                                                                                                                   | Know their God                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| When I first started, when I received a word, I would try to use my limited knowledge of the Bible... to draw use-cases. | Now I rely on the computer to query Biblical resources. I have not automated the retrieval of commentaries.                                                                                                          |
| I used to rely on my education and experience.                                                                           | Now I draw on expert opinion? 2025-12-04T22:00:00 <a href="#">Expert facts</a> , 2025-12-05T01:00:00 I opened and I closed the garage door, northward, from the garage. <a href="#">What prepares for the other?</a> |

2025-07-31T13:25:00 What does the link provide?

1. 2025-07-31T15:12:00 The anchor tag provides a hyperlink to a resource that is identified by its source, src, attribute. Consider providing statistics on the resource type and location.
  2. 2025-07-31T15:33:00 The img tag displays an image that is identified by its source, src, attribute. Consider providing statistics on the image count types, alternate, alt, attributes, and locations.
  3. 2025-07-31T15:42:00 The video and audio are media types that are identified by their source, src, attributes. Consider displaying the source rank, priority order versus (VS) availability? Static versus (VS) dynamic?
  4. 2025-07-31T16:05:00 The iframe tag embeds one HTML document within another.
  5. 2025-07-31T16:12:00 The script tag is for referencing JavaScript. Count the various variable definition types: var, const and let. Count the source code lines, and the estimated source size. Count the methods and their arguments. Compare inline, internal, and external JavaScript?
  6. 2025-07-31T16:22:00 The style tag is for referencing styles. Count the various variable definition types: class attribute, style attribute, style element. Count the source code lines, and the estimated source size. Compare inline, internal, and external Cascading Style Sheets (CSS)?
  7. 2025-07-31T16:35:00 Count the various HTML types occurrences, and parents and children. For example, tables, head, body, foot, rows and columns, and lists.
- 2025-12-05T06:50:00 Scene 1: I told the family of Kim-Chin Chan that I was re-locating to Kansas to work, and I was unsure when I would come back, and at the airport prior to my departure we exchanged telephone numbers. Scene 2: Some males and I were walking to the south of Break Your Fast, north-center-west, Union Square, Union City, and they claimed that Rupert Murdoch went drinking with them, but later on Rupert Murdoch refused to go to the nightclubs. The scenery changes to Bondi Beach. Scene 3: I was trying to find the relationship between the availability of theorists and theorems.
- 2025-12-05T12:09:00 [What did He turn to... as usage?](#) ([2 Chronicles 16:9](#))? San Jose Market Center, 685 Coleman Avenue Suite 10. Taylor Street, San Jose, California (CA), 95110. The scripture reference came at the intersection of Bascom Avenue and San Carlos Street, south-east.
- 2025-12-06T15:26:00 [What does He associate... with me... and how do I be the guide?](#)

2025-11-23T00:28:00 What have you... used... the Bible for ( [John 20:31](#), [Acts 17:11](#), [John 5:39](#), [Joshua 1:8](#), [Daniel 9:2](#) )?

1. Survey ranking for uses of the Bible.
2. Recommended scripture reading: Quote of the day? Keep a historical record.
3. Swear oath online electronically... according to religion, and 2025-11-23T01:39:00 choice text.
4. Learn language by using sacred text — reading, writing, hearing, speaking, translating.
5. Check religion 2025-11-23T01:52:00 for conversion ([Acts 17:11](#)).
6. Bible calendar for events and anniversaries.
7. Which authority for which event?
8. Compare times? For example, during the time the Bible was written, Jews worshipped on Saturdays, the day of the Sabbath. Passover versus (VS) Easter... Day of Pentecost.

2025-10-11T03:24:00 Absent... of the same.

- A database gives the author the ability to reference and proceed with the word. 2025-10-11T04:55:00 [Can we determine... to be usage?](#)
- Nullable
- Outer join
- Union
- Default
- Like

urlPerformance

1. [webpagetest.org](#) In the head element, the Cascading Style Sheets (CSS) were the only initial blocker to page requests, and there were no synchronous scripts. In the footer element, the document was last modified and copyright elements were the only client-side generations.

(Steve Souder, 2016-02-10).

Microsoft SQL Server limitations include:

- [Microsoft SQL Server database connection string ApplicationIntent=ReadOnly](#)
  - On the referencing side, it can only relate to a single referenced entry.
  - Varchar columns have maximum sizes.
  - Varbinary columns can be large.
  - Leading zero [Zero-fives-eight-four-one](#), versus (VS) [5841](#)

2025-07-30T10:22:00 Schema changes

2025-07-30T10:22:00 Schema changes a table

1. The alter table sql command is for changing the schema of a table. The author rarely uses them, because of syntax rules.
2. The SQL Server Management Studio table design menu option provides the most flexibility.
3. SELECT...INTO creates a new table in the default filegroup and inserts the resulting rows from the query into it. [URIMaintenancePage.aspx.cs](#) For example, 2024-11-06T02:04:00 URI database table schema columns re-arrangement, and column additions.

2025-07-14T15:13:00 10 Best Influences on Software Engineering

1. Reviews and inspections: 2025-07-14T15:34:00 [Can I be impartial as others?](#)
- 2007-08-04 [FxCop is a fine static code analysis tool from Microsoft that checks .NET managed code assemblies for conformance to Microsoft's .NET Framework Design Guidelines](#), 2025-07-14T16:50:00 [To what extent do I know the culture of others?](#)
  - 2018-01-05 [W3C Markup Validation Service](#)
2. Information Hiding: 2025-07-17T20:46:00 Addressing: 2025-07-18T19:33:00
1. During his Master's degree programme at the University of Technology, Sydney (UTS), the author learned about the 3 tenets of object-orientation (OO). These are namely encapsulation, inheritance, and polymorphism.
2. 2025-07-18T19:45:00 While working on a project for Information Dialling Services (IDS)\_, 2025-07-18T19:47:00 under the auspices of Ralph Silverman, 2025-07-18T19:49:00 The application client suffered from information overload.
- 2025-07-18T19:51:00 0555 telephone callers were being recorded... in a data entry application. 2025-07-18T19:53:00 Client/Server and the Internet have this myopic view of data. 2025-07-18T20:03:00 The infrastructure was a client/server with PowerSoft PowerBuilder as the client, and Watcom SQL Anywhere as the relational database. 2025-07-18T20:06:00 How much information were we bringing to the client? 2025-07-18T20:08:00 Did we need to build a data entry application? Specialized, customized? 2025-07-18T20:10:00 Is it a listener that speaks? 2025-07-18T20:12:00 [Kongu](#) is a writing tool... where is the speaker?
3. During his Doctorate's degree programme at the University of Wollongong, the author learned to program smart cards by using the C programming language.
4. 2025-07-18T20:50:00 The choice of AlphabetSequence... relies on alphabet places in a language... 2025-07-18T20:55:00 sacred scripture partitioning.
5. 2025-07-18T21:03:00 Multitier: Separation into client presentation, application, and server data management.
1. Client presentation: A web browser parses and displays an HTML document. A JavaScript fetch statement calls a method in a web service, .axmx file, and posts a stringified JSON request. A JavaScript method parses and displays the JSON (JavaScript Object Notation) response.
2. Application: A dynamic link library [InformationInTransit.dll](#) queries the database.
3. Server data management

(Steve McConnell, January/February 2000).

2025-07-13T18:23:00 Software documentation

2025-07-13T18:31:00 Why behind the code

GetAPage.html offers the user the opportunity to enter the word, 2025-07-13T18:42:00 [and retrieves the compared God's word.](#)

2025-07-13T18:53:00 How to install and use the code

GetAPage.html is available via the browser, and so also are the web services it requests. The application-tier and database-tier are also accessible.

(Write the Docs).

The impetus for database recording was to re-use.

2025-06-29T04:18:00 Use Case Interpret Word

[Software Engineering: A Modern Approach by Marco Tulio Valente, Use-cases](#)

2025-06-29T04:26:00 Actor: User

2025-06-29T04:27:00 Main Flow:

- 1.- The user enters the word to interpret
- 2.- The system determines by using regular expressions the data type of the word
- 3.- The system determines the AlphabetSequence of the word, which include the AlphabetSequenceIndex and AlphabetSequenceIndexScriptureReference
- 4.- The system informs the user the corresponding sacred text

2025-06-29T04:51:00 Extensions:

- 3a- If the word is a positive integer, the system should set the value of the AlphabetSequenceIndex to the word, and determine the AlphabetSequenceIndexScriptureReference, and complete processing
- 3b- If the word is a negative integer, the system should inform the user to enter a valid word
- 3c- 2025-06-28T22:10:00 If non-English alphabets flag?
- 4a- If the word(s) count is either 2 or 3 words, determine the associated sacred text

2025-08-28T06:58:00 Use Case WordEngineering

2025-08-28T06:59:00 Actor: User

2025-08-28T07:00:00 Main Flow:

- 1.- The user records the word into the HisWord table by using the Microsoft SQL Server Management Studio
- 2.- The system generates the HisWordID column, sequentially, by adding, and incrementing by 1, the previous, last, HisWordID column
- 3.- The system sets the Dated column to the current system time. The Dated column the user may adjust, backdate, if it is late
- 4.- The user records the unbinned supporting columns, such as the Commentary, Contact, url, and Location. The commentary is the activity in the user's own words. Both the contact and url are 2025-08-28T16:51:16 single-valued attributes. The contact is the system allocated identifier. When there are multiple contacts, their names are determinable from the record as a whole
- 5.- The user 2025-08-28T07:35:00 traces historical data

2025-08-28T07:33:00 Extensions:

- 5a- The user determines the date differences between the corresponding words and events

2025-09-02T20:24:00 [To replicate God's Word?](#)

1. WordEngineering started with the author receiving an idea, and the author documenting similar scenarios in the Bible
2. Now, when the author hears a word, or the author dreams... 2025-09-02T20:33:00 [he relies on his resonance of the truth](#)

2025-06-27T20:10:00Minimum Viable Product (MVP) and A/B Testing (or split testing)

(Marco Tulio Valente).

2025-05-17T20:07:00 Functional Programming... Computed Columns

1. 2025-05-17T20:16:00 Pure function, referentially transparent:
  - In 2002, while programming AlphabetSequence the author made the assumption that the English and Yonuba 2025-05-17T20:32:00 [are the same languages](#).
  - 2025-05-17T21:17:00 The use case only considered the King James Version (KJV). [Significance of the Composition](#)
2. 2025-05-22T18:10:00 Immutability:
  1. 2025-05-22T18:16:00 Object-oriented technology serves change states.
  2. 2025-05-22T18:25:00 Inheritance, interface, method overloading, encapsulation, polymorphism, are all object-oriented principles.
  3. 2025-05-22T18:17:00 As is of the need for database storage.
  4. 2025-05-22T18:20:00 Variable declarations and initializations. Variables refreshing with default values, constants, statics, read-only.
3. 2025-05-22T18:31:00 Practical need for recursion?
4. 2025-05-31T04:44:00 First-class and higher-order functions. The author's investment in SQL-CLR and C#. 2025-05-31T05:07:00 [What am I learning... as I progress?](#), Azure SQL Database. What am I learning... as I make progress?

```
EXEC sp_configure 'allow updates', 0
RECONFIGURE

sp_configure 'show advanced options', 1;
GO
RECONFIGURE WITH OVERRIDE;
GO

sp_configure 'clr enabled', 1;
GO
RECONFIGURE WITH OVERRIDE;
GO
```

5. 2025-05-31T06:22:00 [Lazy evaluation... is a scenario for LINO](#).

(Ben Weidig, 2023-05-09).

2025-05-15T20:10:00 How to be a SQL editor?

Instruction

Append a record in the HisWord table for each sentence spoken by God. Do not make assumptions about entries not uttered by God. The discretion of the author governs his data input into the supporting tables. The database validation rules apply to mandatory, data type, and referential integrity. The ActToGod table manages major and minor column relationships. The URL and HisWordDecidedToWorkOnAGradualImprovingSystem Databases [are not his quest](#). The author is not their source. The author is the custodian of the WordEngineering database. When the author is not the original source, 2025-05-19T08:18:00 should he be the custodian? [Is the monitor... automatable?](#)

lang attribute

As advised, the author specifies the English language on the HTML tag. As of this time, the language attribute is not specified elsewhere. 2025-05-20T09:32:00 [Who speaks... on... authors?](#)

2025-05-15T20:20:00 Data Modeler

- A data modeler uses data definition language (DDL) to design the information container.
  1. In 2002, when I started recording the word of God, I modeled the [WordEngineering](#) database, HisWord table.
  2. In 2007, when I was looking for work, I modeled the [IHaveDecidedToWorkOnAGradualImprovingSystem](#) database, and I developed its Internet application.
- The primary and most basic information container is a table and its rows and columns. For the author, the HisWord table is essential, and its word column is appropriately God's given.

(John Dean, 2018-01-09).

2025-04-14T09:59:00 Conversion Translate ( [Genesis 23:15-16](#), [Leviticus 27:14](#), [Zechariah 11:12-13](#) )

- AlphaNumeric: Monetary values vary according to inflation and foreign exchange rates.
- Unit of Measurement: Age stays constant for a year?
- Individual versus (VS) general: The Temptation of Christ... The 10 Commandments. What will expand? I choose.
- The writing assistant may suggest word changes:
  1. Spelling corrections.
  2. Verb grammar tense.
  3. Synonym versus (vs) opposite.
  4. Singular versus (vs) plural.
  5. Depreciated.
  6. Currency.
  7. Locality, regional, custom, preference.
  8. Anglicized.
  9. Religion.
  10. Formal versus (VS) colloquial, pidgin. Written or spoken word usage and terminology.
  11. Personal extension. Longevity. Insertion. Customization. Adaptation.
- [When did he start saying... and when did he section saying?](#)

6/13/2026, 9:48 AM

Relational Model

1. The author progressed from authoring disparate HTML files to recording information in a relational database.
2. This transition offers an opportunity to analyze tables, columns and rows.
3. Functional dependencies of relationships between columns are determined.
4. The Word column in the HisWord table is a determinant but, it is not always unique; therefore, it is not its primary key.

View

A view is a virtual table that does not reside permanently on a physical storage. The MyURI view is a union of all the URI tables. The ViewContactSet view is a join of the columns in the Contact and contact details tables. The HisWord\_view view appends computed columns to the HisWord table.

Users

The general operating system and compact database are the 2 types of authentication.

(Allen G. Taylor, 2019).

Software Engineer versus (VS) Database Administrator

(Itzik Ben-Gan, 2023-07-03).

Scalability: The users have various options for sizing up their work. The author did not initially restrict the size of the data queried from the server; therefore, there was information overload on the data grid of the client. The tolerance for large data may be exacerbated vertically and/or horizontally. There may be a high count of rows or columns, thereby, demanding ranking and preferences for positioning.

Codd's 12 rules

Focusing on the Word.

- Rule 0: The foundation rule: Since 2002, the author has adopted the relational model for storing his data. The author structures his data and queries his data by using the Structured Query Language (SQL).
- Rule 1: The information rule: The physical store is the HisWord table's Word column. This information is later processed logically in the HisWord\_View.  
2024-06-15T21:28:00 What is pertaining to the data?  
Prior to this word coming, I uploaded the 3 file formats of the dissertation files (.html, .txt, .pdf) from the Windows operating system computer to the UNIX operating system computer Linux variety. I also read the counter-style of each file.
- Rule 2: The guaranteed access rule: Specifying the primary key restriction in the where clause makes each datum reachable.  
2024-06-16T16:30:00 To who, I exchange my word?
- Rule 3: Systematic treatment of null values:  
2024-06-18T21:49:00 Linkberry or neveroverate.
  - Identity columns cannot be null
  - Date/Time type columns will default to the system's datetime
  - The columns that are part of a primary key cannot be null
- Rule 4: Dynamic online catalog based on the relational model:  
INFORMATION\_SCHEMA offers metadata, and it is questioned via SQL.
- Rule 5: The comprehensive data sublanguage rule:  
2024-06-20T18:39:00 It looks at the data as a whole.

| Structured Query Language (SQL) sublanguage |                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Data query language (DQL)                   | Select                                 | Is the most popular and non-risky. Except it may affect performance and bandwidth load consumption.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Data definition language (DDL)              | Create or alter or drop schema objects | The create statement is used once for each new object. The alter statement is mainly for an existing object.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Data manipulation language (DML)            | Insert, Update, Delete, Truncate       | Manipulation may fail in the following cases: <ul style="list-style-type: none"><li>Primary key or unique index duplication. A primary key column may not be null.</li><li>Invalid datatype or extra large data size or out-of-range</li><li>Constraint rule violation - entity, foreign key. The author rarely imposes constraints, like for example in DatedFrom versus (VS) DatedUntil, which may result in negative date differences. The Max datatype will truncate extra data, but SQL Server primary key indexes impose a size limit of 900 bytes. Whereas VARCHAR(MAX) is typically 8000 bytes.</li></ul> |
| Data control language (DCL)                 | Grant, Deny, Revoke                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Transaction control language (TCL)          | Begin, Commit, Rollback transaction    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

- Rule 6: The view updating rule:  
Only computed columns cannot be updated.
- Rule 7: A single operation must support select, insert, update, and delete:  
A base or derived relationship should comply with an operation to select, insert, update, and delete.
- Rule 8: Physical data independence:  
Batch and end-user operations are not impaired when changes are made to physical storage or access method.  
2024-06-22T15:13:00, 2024-06-22T15:15:00 There is no deterioration in data...when there is a restore, import, or bulk copy.  
2024-06-22T15:36:00 What part of yourself, do I desire as My future?
- Rule 9: Logical data independence:  
2024-06-22T17:42:00 The opinion of someone else...is beside me.
- Rule 10: Integrity independence:  
The author is not implementing constraints.
- Rule 11: Distribution independence:  
The user is not aware that the data and log are in separate files. Replication and mirroring are other means of ensuring redundancies.
- Rule 12: The nonsubversion rule:  
Row processing such as cursor must abide by integrity rules and constraints like set processing.

(Edgar F. Codd, 1970).

Concept: GetAPage.html

1. User-facing: A user enters a received word, and there is a set of tabular responses.
2. Functional: This is a Single Page Application (SPA) that depends on AJAX, and it calls multiple web-services.
3. Behavioral: There are associations between the word and the Bible and the dictionaries' object-oriented classes and entities.
4. Independent: This is a composite of previous stand-alone work.
5. Purposive: Based on user input, the system retrieves data, while also allowing further queries.
6. Reusable: The idea is to retrieve information from a set of sources and send the results to various destinations.
7. Valuable: The data is free, and the work is non-complex.

(Daniel Jackson, 2023-06-26).

The user-interface (UI) supports queries, and not database maintenance. The author builds an interface for each additional work that is customizable by the end-user, and independent of the environment of the author. A step... further... for... among us. The mundane query initiative can be participated in by everyone. The complicated tasks are reserved for skilled users.

(Daniel Jackson, 2024-01-08).

What did He dispose of in making man ( Genesis 2:7, Genesis 6:3 )?

(Matt Chamoff, Merrick Furst, Daniel Sabbah, Mark Wegman, Arvind Krishna, 2023-11-07).

| Vocation | Ruler and a judge | Ruler and a deliverer | <a href="#">Acts 7:10, Acts 7:27, Acts 7:35</a> |

What is remembrance, associate?

- The 2 Transact-SQL functions that the author uses are DateDiff() and DateAdd() with the day metric unit.
- The author's source, Wikipedia.org, places dates in high visibility locations.
- For the most reliable date computations, the author depends on the Biblical calendar.

Volume, Velocity, Variety

| Keyword  | Commentary                         |          |
|----------|------------------------------------|----------|
| Volume   | sp_spaceused @@objname = 'HisWord' |          |
|          | Keyword                            | Value    |
|          | Rows                               | 115689   |
|          | Reserved                           | 28296 KB |

|          | Index_Size                         | 9648 KB  |
|          | Unused                             | 1544 KB  |
| Velocity | The author does manual data entry. |          |

| Keyword | Commentary                                                                    |
|---------|-------------------------------------------------------------------------------|
| Variety | At the beginning, the author parsed XML files into textual relational tables. |

(Jack Hyman, March 2024).

Data Types

HisWord table  
Qualitative (categorical) non-numerical/descriptive - nominal (non-ordered), ordinal (orderly) or  
Quantitative (numerical) uses numbers - discrete (countable), continuous (measurable)

| Column name        | Column type             |
|--------------------|-------------------------|
| HisWordID          | Discrete (countable)    |
| Dated              | Continuous (measurable) |
| Word               | Nominal (non-ordered)   |
| Commentary         | Nominal (non-ordered)   |
| Uri                | Nominal (non-ordered)   |
| ContactID          | Discrete (countable)    |
| ScriptureReference | Nominal (non-ordered)   |
| Filename           | Nominal (non-ordered)   |
| EnglishTranslation | Nominal (non-ordered)   |
| Location           | Nominal (non-ordered)   |
| Scene              | Nominal (non-ordered)   |

| Data type               | Column type |
|-------------------------|-------------|
| Nominal (non-ordered)   | Text        |
| Discrete (countable)    | Numerical   |
| Continuous (measurable) | Date        |

(Jack Hyman, March 2024).

[Time for?](#)

- Birth ( [Acts 7:20](#) )
- Family ( [Acts 5:31](#) )
- People ( [Hebrews 3:9](#) )

Allowing a person the entirety of time

- Initially, the author's strength lay in the database. The author parsed XML data in datasets, datatables, datarows.
- The author's familiarization with JavaScript meant client-side work.
- [What I am good at doing... is what He is good at making](#) ( [Genesis 41:32-57](#), [Genesis 1:1-1:2](#), [Genesis 4:26](#) ).
- Derivation...variety: Processing of a word spoken by God to the author is initiated by [GetAPage.html](#)
- 1. GetAPage.html serves as a gateway to specialized links.
- 2. GetAPage.html saves users from having to remember specific URLs and opening multiple browser tabs.
- Technical writer: [Do you write it as a manual? Do you write it as describes the functionality?](#) ([Daniel 9:23](#))?

O ti di computer

- To calculate the AlphabetSequenceIndex the attempts by hand may suffice
- BibleWord may not be deductible until ignoring the parts of speech
- Date difference difficulty lengthens between the biblical and the Gregorian calendar

Microsoft SQL Server Management Studio: data entry

- You could say, this is what I do... [Why I do it?](#)
- I have had to balance migrating to an Internet interface via using Azure Data Studio, or continuing using the faster, stable, Microsoft proprietary SQL Server Management Studio.
  - [Where are the differences, commonion?](#)
  - [Excrementary...as the same?](#)

Influence

- Data:
    - Biblical data is hosted locally and accessible via the Internet by linking to web addresses or placing web service requests.
    - For over 2 decades, the author has continuously received word that he constantly records and queries. [Signaling?](#)
- Is there a creative need for new data? The Bible is complete, but do we have to find new ways of using it? Is there a divergence or supplement? How do we explain and analyze?
- Language translation
  - Familiarity with the subject and tradition. Apply domain knowledge.
  - Maturity and relevance to our time
- Choosing a closer relationship with God.
- Software: Algorithms are patentable? The author has not sought to patent AlphabetSequence...it should be open to ideas. [We all make our following.](#)
  - Hardware: Although the author's doctoral study was on intelligent appliances...he feels drawn to the Bible. God has reminded him of his success...when he is pertaining to Him.

(Andrew Glassner, 2021).

This data...where does it exist?

Legacy storage of some data types is unnecessary, since this data is computable. For example, concordances are automatically determinable. Dictionaries that contain the meaning of words are available on-line. Computers provide up-to-date versions and translations. How to display the data? After determining the AlphabetSequenceIndexScriptureReference the author currently retrieves and displays in particular the King James Version (KJV) Bible text, and the author provides a hyperlink to a scripture reference page for displaying other Bible versions. This practice follows Google's display of a Wikipedia's sidebar and providing a hyperlink to the particular Wikipedia url. For Bible literates, this reorganization may be redundant. What programming skills are in demand?

1. Issuing a SQL select, and using a cursor to loop through a tubular or variable output, and building an HTML fragment
2. Simply creating a HTML anchor to a source url
3. Fetching, parsing, and building the results of a web service

[Our comparing our trade](#) ( [1 Samuel 25](#) ) [To be conformable of ase.](#)

Talent and reward?

- What is the cost of entry? There is no monetary investment. The author started when he was unemployed.
- What is the skill-set? To do manually? The order of alphabets is the literacy competency level. To know how to spell words is also useful.

What opinion of the same do I have?

- Calendar - evening and morning, sun and moon, Passover
- Order of birth - genealogy, leadership - blessing, allotment

Word direction

- When I hear a word: I try to connect to occurrences
- When I read a word: I try to put it into my own words
- When I recall a word: Separated alike joined together ( [Joshua 1:8](#) )

Location of content

- Flat files (html and xml): Reasoning
- Database: Word from God
- Software: Automation of work

Laws of Communication

- The Law of Credibility:
  1. HisWord table Word Column: As much as God spoke it
  2. Period of Time tables: With respect to time
  3. BibleWord table and GetAPage.html BibleWord section: King James Version (KJV) dependant
  4. GetAPage.html HisWord section: Time variant[For a period of time, we see as we seem we are? What needs a success.](#) ( [Genesis 4:7](#), [Matthew 14:8](#), [Mark 6:25](#) )?

(John Calvin Maxwell, 2023).

Chuck Missler versus (VS) the author

| Chuck Missler of Koimonia House Inc., P.O. Box D, Coeur d'Alene, ID 83816                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Author                                                                                                                |

Expendable Data

The Bible, dictionary and commentary databases should be accessible from central locations, and there should be no need for user storage. For the URI database, the date of publication is constant, but the date accessed may vary by users. Storing user's information is achievable by using local and session storage, cookies, and bookmarks. The date of publication recognition is determinable from Google's last update and YouTube.com. The directory listing includes the last modification date. The node's data-attributes and the time node may give date time information.

AlphabetSequence concerns include:

- How essential are we to the personification of God?
- The spirit man holds
- When did He exchange...His view as ours ( [Genesis 18:19](#) )?
- How are we acceptable to what is new? How does God, build up, to His word ( [1 Samuel 9:15-17](#) )?
- Copyright violation: Not giving credit to the original speaker
- Separating the word from the deed
- The grammar needs refining
- Name spelling, for example, Bryan versus Brian
- Non-English alphabets
- British versus American spelling
- Soundex, this is what I heard; this is the interpretation; such as, this versus these, has versus as, there versus their
- Inference, such as, abbreviation
- Differences in Bible verses ( [Matthew 23:14](#), [Acts 8:37](#), [Acts 15:34](#), [3 John 1:15](#) )
- Naming of words ( [Genesis 22:28](#), [Genesis 35:10](#), [Genesis 47:27](#) )
- We have been doing unconvinced power
- I said, I heard. 2021-04-11T08:37:00 In a location to the North, probably 99 Ranch Market or Marina Food, or Daiso. A young Asian male 1st makes a selection. I am testing black rubber sandals shoes of different sizes, the shoe size written 6.9 is too short, tight. I said, 6.9, in my sleep, while dreaming, I heard (six ten). 2021-08-03T17:22:38 Where are we misguided by flight?
- [What does He volunteer as time?](#) AlphabetSequence is resource minimal:
  - Doable by hand
  - Compute: Not technologically demanding
  - Maturity: Since 2002
- [Separation into Sequence](#)
- [Is this a finalized work, and how is it accessible? It is a transient database.](#)
- Scripture reference in context.
- To complete the life of pleasing God, as I chose men.
- Hearing and spelling the word...and not awayed... by the grammatical correctness.  
To co-operate as we are. [Robert Estienne](#) [English Alphabet](#)

2017-03-06T00:00:00 A Comparance of Age

Divided as separated. On this way, that way.  
I want to program, but I don't want to match two programs together, except for deep thought.  
See when God grants increase; such as in creation, when God counts the days, and separates it into evening and morning. Increase versus decrease were first explicitly mentioned during Noah's flood. These differences in size we can associate with signs - the sun and the moon. During the day, you need the sun for your activities; during the evening, it is not necessary. Rachel's prayer, and naming of Joseph; Joseph's dreams and interpretations. These counting is explicit, before Exodus, such as, the 10 plagues of Egypt ( [Genesis 12:5-11](#), [Genesis 30:24](#), [Genesis 40:1-11](#) ).  
[\[C-P-I\]](#) is separable into four layers: these are the link, Internet, transport and application layers. No breaking ( [Matthew 19:8](#) ).

Marriage

Marriage is not a practice, in the life after, resurrection ( [Matthew 22:30](#), [Mark 12:25](#), [Luke 20:35](#), [Revelation 21:2](#), [2 Corinthians 11:2](#) ). Co-incidentally, the disciple, who Jesus love, John the apostle, does not mention this event, in the Gospel of John. [It is more of a father that wants you.](#) Jesus resurrected, after three days ( [Matthew 12:40](#), [Matthew 26:61](#), [Matthew 27:40](#), [Matthew 27:63](#), [Mark 8:31](#), [Mark 14:58](#), [Mark 15:29](#), [Luke 2:46](#), [John 2:19](#), [John 2:20](#), [2 Corinthians 11:2](#), [Revelation 21:2](#), [Revelation 21:9](#), [Revelation 22:17](#) ).  
The breaking of device ( [Psalm 34:20](#), [John 19:36](#) ).  
On the client, HTML is in content, CSS is presentation, and JavaScript is behavior. Both ASPX and ASMX are server-side logic.  
The application tier is in a dynamic link library (DLL), and it is separable into client, database, and application logics, but with the advent of language integrated query (Linq), this delineation is slowly diminishing. Linq rivals previous division of labor.  
The database consists of tables, views, indexes, constraints, stored procedures and functions. These programming logic may be SQL or SQLCLR. SQL critics complain that while the rest of software development have progressed, we still use an archaic language; NoSQL is a challenger.

Visibility ( [John 4](#) )

The client is accessible from the browser, both the user interface and the source code, along with the errors and exceptions. The interface is made-up of request and response. Text-to-Speech will aid the people with poor visibility. The client handles the human computer interface (HCI). The Bible versions are selectable options in HTML or JavaScript.  
The database contains the real information, that makes-up the result set.

Lifecycle ( [John 3:3](#), [John 3:7](#) )

In computing, we have had mainframes and terminals, client/server, Internet, mobile and now cloud. The trend has been from proprietary to open architecture.

Accompany ( [Matthew 4:6](#), [Matthew 18:10](#) )

What are the pairing?  
The client started as HTML, but now has JavaScript and CSS.  
CGI originally served the back-end. Flash and plug-ins have made way for other technology, such as HTML5 video and canvas.  
JSON and XML have made in-roads.

To each resemblance

- Where His word expected mine? When I get a word from God I could do the following?
  - Write the word in my notepad, and never refer to it again.
  - Record the word in the WordEngineering database, HisWord table, word column, and associate the accompanying columns.
  - Produce an artifact based on the word.

[What do I desire...as part of significance?](#)  
1. Moses? Prophet ( [Exodin 4:10-16](#), [Numbers 12:6-8](#), [Deuteronomy 18:15](#) ).  
2. Abraham? Seed ( [Genesis 17:5](#), [Genesis 15:2](#), [Genesis 22:2](#), [Genesis 22:12-18](#), [Hebrews 11:17-19](#) ).  
[The drawback of the relational approach?](#)

- Centralized versus (VS) distributed storage?
- Unique foreign key? Master-child? Hierarchical?
- Duplicable
- Maintainability
- Expertise and familiarity? Isolated.
- Spontaneous versus (VS) latency? What to place in the database, what to extract from it?
- [When is capacity...full enough?](#)
  - Databases may reside inside multiple files.
  - Although databases may store different file types. This wasn't the original intention.
  - Databases are abstractions.

Lacking expertise?

- Usability: The author has limited experience with building a user-interface (UI) with Cascading Style Sheets (CSS).
- Quality Assurance (QA): Some changes break existing code.
- Database neutrality: The database definition language (DDL) and embedded SQL are not portable across all databases. For example, SQLCLR, is in use.
- Adoption by emerging technology? Mobile, cloud...

Accessibility to name?

1. The first and only word spoken to me in the United States of America (USA) prior to my deportation is, I Am taking you on a journey. The first word spoken to me upon my return to the United States as I prepared to go to a christening in Los Angeles (LA) was lle eyan mi lon lo yi. Translated it is my person's house you are going to. Location, movement, matters to God. The first word is in English, the colonized language. The second word is in Yoruba, my native language. Where is the expectation of good? Times are expectations.

Where will I be of the same?

| Word              | Scripture Reference                                                                                                              |

Information Flow

Sharing His word; is following His deed.

(Charles M. Kozierok).

With asms web services, the author, standardized on JSON for returning data. The alternative is XML. The preference for JSON, is because of its lighter payload. Another difference, in the result set, the author chooses if to return a dataset, datatable, or scalar? The datatable is useful for a singular resultset. With SQL Query select statements, the column list may refer to \*, for returning all the columns, in the order they are arranged in the container, table or view; or otherwise the stricter, specification of each column to return. The author restricts which rows to return, by issuing the conditional where clause; the top 1 select clause is useful, for quote of the day; as it supercedes the set rowcount 1, limitation. The author depends on the database order by clause, for sorting in ascending or descending order. Data is also rankable by clicking on the table's column header.

Basic Communication Modes of Operation

The author's SQL Server TCP/IP is turned off, because the author does not want interference from the outside. The author imposes an artificial Simplex Operation; only supporting external read requests, and not allowing updates; which is a one-way traffic of data from the server to the clients. The other options are Half-Duplex Operation and Full-Duplex Operation.

Quality of Service (QoS)

Most of the author's web pages transmit textual data; but a few pages offer text-to-speech or video capabilities; these rare application rely on high-grade speciality. The author as a programmer does not meddle with these intricacies; the technology provider takes care of the nitty-gritty.

Parameter Standardization

The column name is kept consistent in the query string, up-to the naming convention and the case-sensitivity; this also applies to where we specifically refer to a column name in JavaScript. This is most seen, in the Scripture reference and Bible word variables, which the author shares around.

Global Resource Allocation and Identifier Uniqueness

The domain name is unique to the organization; and the Javascript code for AJAX explicitly mentions the virtual directory; the internet provider issues the IP address.

HisWord table nullable columns

All of the columns in the HisWord table are either system generable (HisWordID, Dateid) or nullable ( [1 Samuel 3:19](#) )

| For                         | Against        |
|-----------------------------|----------------|
| Prudent                     | Disposable     |

Typing Assistant

What are we [excluding person with](#) ( [Jeremiah 31:15](#) )? This is a long trend of disruption... word resonances with AlphabetSequence (Index, Scripture Reference). [These are edits](#). A record is insertable only once. There may be multiple updates.

| For | Against |
|-----|---------|
| Man | Machine |

Numbers in themes

- He expressed mood as how He felt ( [Genesis 1:4](#), [Genesis 1:10](#), [Genesis 1:12](#), [Genesis 1:18](#), [Genesis 1:21](#), [Genesis 1:25](#), [Genesis 1:31](#), [Genesis 2:9](#), [Genesis 2:12](#), [Genesis 2:17](#), [Genesis 3:5](#), [Genesis 3:7](#) ).
- He expressed start and end of time ( [Genesis 1:1](#), [Genesis 1:5](#), [Genesis 1:8](#), [Genesis 1:13](#), [Genesis 1:19](#), [Genesis 1:23](#), [Genesis 1:31](#), [Genesis 2:1](#), [Genesis 2:4](#) ).
- King of the Jews ( [Matthew 2:2](#), [Matthew 27:11](#), [Matthew 27:29](#), [Matthew 27:37](#), [Mark 15:2](#), [Mark 15:9](#), [Mark 15:12](#), [Mark 15:18](#), [Mark 15:26](#), [Luke 23:3](#), [Luke 23:37](#), [Luke 23:38](#), [John 18:33](#), [John 18:39](#), [John 19:3](#), [John 19:19](#), [John 19:21](#) ).

To be actual things

- Pronunciation ( [Luke 1:13](#), [Luke 1:60](#) )
- Application ( [Luke 1](#) )
- Spelling ( [Luke 1:63](#) )
- Reference ( [Matthew 11:14](#) )

In telling the future, there are two parts: prophecy and fulfillment ( [Revelation 19:10](#) ). The author feels that search engines and artificial intelligence (AI) have made sufficient inroads in interpretations.

What prize at the target?

| What prize at the target?                                                          |                                                       |                                                               |

| <a href="#">http://github.com/KenAdeniji/WordEngineering/tree/main/IIS/Gradual</a> | I have decided to work on a gradual improving system. | <a href="#">Psalm 133</a>                                     |

SQL uses set theory, whereas most programming language clients, including LINQ, use row processing or procedural programming. Relational operations: 1. Projections: The author will use projections, select clauses, for retrieving the user-specified Bible version column. 2. Selections: The particular Bible row verse selections, where clauses, are built using dynamic SQL. 3. Joins: Normalization offers the opportunity to segment and in most cases defer from using the join clause. The contact view join the contact table and its subsidiaries. C# provides datasets which contains datatables and ASP.NET uses GridView. [This is visible in:](#)

| .aspx                                                                                                        | .aspx.cs                                                                                                        |
|--------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|

| <a href="#">http://github.com/KenAdeniji/WordEngineering/blob/main/IIS/Gradual/Contacts/ContactList.aspx</a> | <a href="#">http://github.com/KenAdeniji/WordEngineering/blob/main/IIS/Gradual/Contacts/ContactList.aspx.cs</a> |

Theta join the old convention of placing columns relationships conditions in the where clause has been superseded by the ANSI/ISO join clause.

(Kevin Kline, Regina O. Obe, Leo S. Hsu).

logparser

The log files for this observation are between 2017-01-02 and 2023-06-08.

Elements processed: 938499

```
logparser.exe "SELECT sc-status, sc-substatus, COUNT(*) FROM *.log GROUP BY sc-status, sc-substatus ORDER BY sc-status" -i:wkc
sc-status sc-substatus COUNT(ALL *)
200 0 185115
304 0 9467
```

The count of requests served from the server, HTTP Status code of 200, clearly outweighs 304 HTTP status code; local cache. HTTP 500 Status Code, internal server error, sum is approximately 6400.

```
logparser.exe "SELECT cs-uri-stem, COUNT(*) FROM *.log WHERE sc-status=500 GROUP BY cs-uri-stem ORDER BY COUNT(*) DESC" -i:wkc
logparser.exe "SELECT TOP 20 cs-uri-stem, COUNT(*) AS Total, MAX(time-taken) AS MaxTime, AVG(time-taken) AS AvgTime FROM *.log GROUP BY cs-uri-stem ORDER BY Total DESC" -i:wkc

Productivity

- 1. Productivity is the measure of unit tasks completed within a time frame or at a cost.
- 2. A project cost is its work hours. A work day is 8 hours. A work month is ≈176 work hours. A work year is ≈2000 work hours.
- 3. The degree of conceptual complexity increases when an expression contains various function calls and many parentheses. Scope complexity is the fitting between parts.
- 4. To predict productivity? Re-use.
- 5. Metric:
  - Executable Size Metric: Is the code largeness. It does not fully consider the uninitialized array data. It includes library code which reduces complexity. It is not a language-independent source. It is not CPU-independent.
  - Machine Instructions Metric: This is the size or count of the machine instructions.
  - Lines of Code Metric (LOC): It counts the number of source code lines. It is CPU-independent. The Linux word count, wc, command will suffice.
  - Statement Count Metric: It excludes comments, blank lines, and counts as 1 a statement that spreads across multiple lines.
  - Function Point Analysis (FPA): It looks ahead and assumes the amount of work a program will require. It details the inputs, outputs and basic computation. FPA has become a postmortem (end-of-project) tool.
  - McCabe's Cyclomatic Complexity Metric developed by Thomas McCabe: It finds out the complexity by determining the paths through it.

(Randall Hyde).

Word speaking: What did He use?

Energy                                                                                                                                                 |             |                             |                           |
| Aesthetics<br>How it looks     | 1. Geometry ( e.g. Earlier work focused on generating Internet documents. The transition was from html, xml/xslt, aspx, and now AJAX. )                                                                                                                |             |                             |                           |
| Quality<br>How well it is made | 1. Materials<br>The author's work is software specific.<br>2. Cost<br>Open-source<br>3. Manufacture<br>While it is Microsoft-centric for the back-end (.aspx, Transact-SQL, SQL Server database), the front-end is industry standard (.html, js, css). |             |                             |                           |
| Safety                         | 1. Time<br>The time duration is minimal.<br>2. Transport<br>The work is done on one computer.<br>3. Ergonomics<br>The doctorate work consisted of a proof-of-concept that is easily replicable.                                                        |             |                             |                           |

(DeLean Tolbert Smith).

Brainstorming

| Brainstorming             |                                                                                                              |
|---------------------------|--------------------------------------------------------------------------------------------------------------|
| Strategy                  | Description                                                                                                  |
| Focus on quantity         | AlphabetSequence includes the whole Bible. The author has not expanded the 2-words nor 3-words computation.  |
| Wait to judge             | AlphabetSequence is relevant to the English language and the King James Version (KJV) Bible?                 |
| Think outside the box     | While the initial focus was on the Bible, written word; research now includes spoken word.                   |
| Combine and improve ideas | The author solicits input from others.                                                                       |
| Keep focus on the problem | Database recording resulted from the effort to determine when? The author has concentrated on this timeline. |
| Set a time limit          | Elaborious work is avoided.                                                                                  |

(DeLean Tolbert Smith).

Design Selection

- Agility: Ease and speed
- Flexibility: Adaptation to changes
- Component: Encapsulation

(DeLean Tolbert Smith).

Ease of Manufacturing

- Large number of independent parts: Team or solo development
- Parts accessibility: Build versus (VS) buy

(DeLean Tolbert Smith).

Decision-screening Matrix

The AJAX approach offers the following benefits in performance criterion and weight:

- Ease of manufacture
- Engineering skill needed to build
- Robust design
- Primary function independence

The competing solution will include:

- Server-side JavaScript, for example, Node
- Front-end library and framework, for example, React

(DeLean Tolbert Smith).

- To know my part as His?
  - [ContactMaintenance.aspx](#) is a replica copy of a Microsoft wizard master-detail example.
  - [I have decided to work on a gradual improving system](#) is a reverse-engineering clean room implementation of [Microsoft hotmail.com](#).
  - What are you able to do now that you weren't able to do before? [To recognize the following as 1 \( 2 Summed 3-39 \) ?](#)
  - [Who it comes to? \(Hebrews 1:1-24 \) ?](#)
  - [What is the following? List of C-family programming languages](#)

Fixing your website's JavaScript performance

- Long tasks:
  1. Yield to the main thread: the `PageLoad` event handler performs an `IsPostBack` check, and if it is not a `PostBack`, parses the querystring. 2025-07-12T03:19:00 [Sets the input value](#) of the various element IDs, and submits the query.
  2. Optimize your rendering patterns:
    - Eliminating layout thrashing: 2025-07-11T18:17:00 [AJAX - only refresh updates](#).
    - Using efficient CSS selectors: The simple 2025-07-11T18:37:00 [table inner elements sub-ordinates](#).
- Large bundle sizes: A bundle size is the total amount of JavaScript code that needs to be downloaded, parsed, and executed when a user visits a website.
  1. The author does not use inline JavaScript.
  2. The author minimally uses internal JavaScript for page-specific event handlers.
  3. The author always uses an external JavaScript file, [9432.js](#), for rendering dynamic data-driven HTML tables and selects. 2025-07-12T14:54:00 [What contribution I have... as someone else? \( Mark 7 \) ?](#) 2025-07-12T16:44:00 [What did He do?](#)

How did I do( [Luke 1:41](#), [Luke 1:44](#), [Matthew 3](#), [John 3](#) )

(Mozilla DebugBear, 2024-10-08)

### Web Site Performance Metrics

The load time, and response time to user action and submission. The author tested the time, it takes to load each page, after development; and the wait period was satisfactory. For the Bible database, the author does not expect further increase in database size, which will put premium on the load. [Ahmdal's Law](#) comes into recognition in [GetAPage.html](#), by performing multiple tasks with Web Services and measuring with [performance.now\(\)](#).

|            |                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

### Development History

God doesn't use inform ( Psalms 81:5, John 16:30 ). He mandates

| Technology                        | Commentary                                                                                                                                                                                                                                                                                  |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Relational Database               | After the introduction of the author to Microsoft SQL Server, the author does not feel the need to adopt newer technology like object-oriented database, nor nosql.                                                                                                                         |
| Server-side Programming, Back-end | The author learnt C#, and there has been no reason to adopt upgrades. When Microsoft MVC learning is not necessary. The scripture reference class offers partition for instantiation. The Microsoft platform is the author's choice, although the migration to .NET core may be inevitable. |
| Programming Style                 | This lineage are passage. C# is object-oriented. JavaScript is functional programming. SQL is declarative and imperative.                                                                                                                                                                   |

### A Causal to Hearing Words

He said and He did. Word work ( Genesis 11:1-9 ). The authority to know...and discern...between things. At the beginning of WordEngineering, my practice will include

- Read and recite the Bible.
- Pray.
- Praise and worship.
- Take computer courses at [Ohlone College](#); in the Fremont and Newark campuses.
- Read books and magazines at [Barnes & Noble](#), [Brendans](#), [Walden Pond Books](#), [Wal-Mart](#) and public libraries.
- Listen to Christian commentators.
- Sexual abstinence and celibacy.
- Solitary living at [Newark City in California](#), [Patmos](#).
- Fast, evening, only, once, a day, in the evening. I ate [Norma Holdings](#) Kokoro rice.
- Walk two hours a day, between Newark and Fremont, to do programming. Learn how to program today's technology, with relevance to the word's revelation.
- I was living on a meager income ([Exodus 2:15-25](#)).
- Only familiar with [Case-based Reasoning](#) and [Use-Case](#).
- Alphabet/Sequence is [algebraic](#).
- See-based: Effort to record everything [Bible code](#).
- [This is a man; he wanted to know about his favorite](#) ([Daniel 1:3-21](#), [Daniel 9:2](#), [Daniel 10:1-11](#), [Daniel 10:19](#)?)
- [Observance](#) ([John 5:19](#))
- [Personalization of Realization](#) ([Proverbs 25:2](#)?)
- [I will make the difference](#) ([Deuteronomy 26:4](#), [Ezekiel 16:3](#)?)
- [What we all ought to be?](#)

- 1997-12-31 I will not entertain Nada. Prophets make New Year predictions.

In Australia, I got involved with the prison ministry at the Villeroi Ind Detention Centre. The Christian missionaries that were serving felt that fellow migrants might aid in responding to new applicants. I was reported by my country of origin, Nigeria, from the States of America (USA); therefore, I could share the plight of those inmates. I was also in the court process, so I could better understand Australia's laws. Finally, my most productive contract consulting was at the Department of Training and Education Committee (DTEC), so I had an understanding of integrating and skill-building workmates. I tried to share computer books, but inmates were indifferent by their relevance to their lives. They were expected to write letters to immigration officials. This influenced my desire to practice what I preached. I was not a computer expert, but I was a good writer. How could I help those people? I had a great idea. I would write a book on the Holy Spirit partake on my life. I would share my experiences with the Holy Spirit, and how I was able to have a burden. All these words were good, but I could mean as much as I want. How does the spirit hold it down? How are computers programmed? How are humans are used? How are they used? What is a finding out, is how necessary I am a person? How do I do my part in participating? What can you take from me, and make as your own? My words may not be what you said, but how can your experience let you say? Imagine your life will be lived, as you see. When the times, programming lines, lines of code, play out a scenario. So words make meaning as sufficiency. Those who have lived to complexity? To the full of his word? [John 20:21-24](#) ? What can his prove relate to me?

What did He know as one? First, pre-eminence, *joir*

**What do you want to use it for?**

It is finally, a database work. That is the author records God's Word. What the author hears, he relates to the Bible and the other scriptural sources. These information are all in database tables, giving the author the luxury of using relational technology. The benefit includes storage and archive, that is, the work is usable in tabular format. There is a copy of the information running Microsoft SQL Server on a Linux operating system, which the author switches to, by changing the database connection string of one node in the web.config. When the user decides to stabilize and admit no further changes; then there is no need to no additional database update work. As with such work, the database schema remains consistent, since the beginning. The choice of work, meets today's expectations. The addition of the ActToGod tool, demonstrates the maturity of the author, since it advances from data to information.

The author, first wrote his history, in multiple stand-alone files .HTML, .XML. ([Acts 7:22](#)). This documentation didn't allow for enough dating, to track creation and change, nor easy querying. Therefore, the decision to move to a relational database; that would augment this fact.

Since the beginning, the author wrote a `ContactMaintenance.aspx` server-side page as a user-interface (UI) to record contact information. This page remains active, till today. The author uses Microsoft SQL Server Management Studio to document general information. When the author is offsite, text editors provides a place to scribble data manipulation language (DML) statements into SQL script files, for later execution. Please

I have a product; where is the method?

1. What is the minimum requirement? The author believes it is the Holy Spirit spreading the Word, and it is not him, making up the word. As long as you have the spirit of God, then you are receptive to this information sharing. The word is not always clearly heard

2. What is the literacy level requirement? If you know the alphabets arrangements, then you can determine the AlphabetSequenceIndex by hand. To determine the AlphabetSequenceIndexScriptureReference, you need to know, the count of chapters and verses. This

3. The Biblical account wrote dreams and visions textually, without resorting to the database. Search Engines Crawlers parse the standard HTML files and rarely query the database. The calendar: years, months, days, may benefit from the stipulation and generality of the Common Era.

4. Where is the world leading and how do we follow it? The author fiddles with the idea of bringing technology to the Word of God. The author is unaware of the start and early beginnings of dictionaries, concordance and commentaries; but the author gains from the works as a reference. The widely accepted of a work, economics, preference and knowledge.

5. The result of the Bible, is how we use it. The emphasises of Jesus Christ and apostle Paul is the word for today? As the author sees from the Bible, Moses assigned intervention to leaders, and Moses went to God as a higher authority. Who is the work for? Who can benefit from reading this work?

### Business Analysis Body of Knowledge (BABOK)

### Tasks

### How to go about it

### Purpose

The author's original intention was to record God's word. This later led to finding the word's background and implication

### Inputs

The data input is currently being done manually, but the author looks forward to electronic automation. The identity and date are potential external inputs. The scripture reference requires Bible knowledge.

Elements

Word processing flows more naturally than data entry.

**Guidelines and tools**

A relational database is a substitute for text processing.

**Stakeholders**

[I am the primary contributor and beneficiary.](#)

**Outputs**

(Alison Cox)

- Etem word: Leading up to 2008-03-07, I was not fully recording the word of the LORD ([Job 23:12](#)).  
 • I used to ask God for a word? To realize where my opinion lies?  
 • [Emulation with data](#).  
 • You previously stored your work in a database. You worked on a text in html files. 2002-10-23 You chose to return to database content. Who is this work intended for? Can somebody else take on the responsibility for specialization, localization, processing of your work? Draw intelligence from your work ([Job 22:11](#))? Of What myself offering as many as I use?  
 • Words heard between waking up and walking outside are written in the author's backback's notebook for meditation. Note the earlier words from night to morning are stored in the author's bedside notebook. What I provided for other? Is how I needed Him. Putting Him into words.  
 • My time away from the family, United States of America (USA), may have helped me gain independence.  
 • In Australia, the women that came into my life were suffering from solitude. In Port Kembla, I left for the weekends for Sydney. [How can we bring a life, except ours?](#)  
 • [Do I click the truth? Do I click the truth?](#)  
 • [The importance of the Word is how it is made.](#)  
 • Post-dated: God convicted me, I do not take the plight of the people to heart. Macomber BART Station. Bay Street Emeryville B.N.com Fire Alarm Panel 8. FDC Building A 5604-5634. [To mean, I decide the story?](#)  
 • [What did they handle the Messiah? Luke 1:38](#) ? [Choosing the divide? To need someone as I](#) ([Genesis 15:2](#)) ? [You know Me as capable of you?](#) ([1 Samuel 17:36](#), [Romans 4:19](#)) ?  
 • The Yonbu sentence. [Ma fashen di](#) . I will use wisdom to bind you.  
 • No difference in companion.  
 • [How useful you have been in determining a sign? How diversification the changes?](#) ([Genesis 4:7](#))  
 • The Windows operating system. The Windows operating system offers the clipboard copy command. When using the Mozilla Firefox browser and copying the address bar, the author selectively only copies the domain name and leaves out the protocol when it is http or https. This saves storage space, since this is the default protocol. When copying information from the page, please note that there may be leading blank spaces, which requires truncation.  
 • Difficultly level? Our work is divisible into writing the word, commentary, and deducting meaning. When the word is from God, the data entry is easy when it is in English, except when it is in Yonbu, where there may be spelling and substitution errors. The commentary does not have to be exact, since it is an inference. Determining the correlation between people, places, and historical information, may require expertise. What I am able to do is how He types me. As I wrote this paragraph, I entered in my own words  
 • I sought assistance from Him. [A step to take a next journey of the LORD](#). [Whose obscenity has He solved?](#)  
 • [What we be, in the midst of a people, pertaining to God?](#) ([Matthew 19:12](#)).  
 • [What do you know how to use, as you desire yours?](#)  
 • [Rich of God, Rich of God.](#)  
 • [How many are others?](#) ([Daniel 11:41](#)) ?  
 • [I have to present God as I am allowed to be.](#)  
 • When I want to do it: how He wants it to be? [When does the word mean the answer?](#) ([Acts 10:13](#)).  
 • People have asked me how I do my work? My twin sibling calls my work, data entry. I start my day electronically recording the activities of the previous night. The bare minimal requirement is an editor, but I now use a database. I have always contemplated whether I should personally store my information, or look for a cloud provider? Build or buy? Another thing of note is storage? How often should I backup and archive my memory and to where? What is in random access memory (RAM) may be lost when there is power loss or when the application or computer shuts down for any reason. What is on the hard disk may be lost when the computer does not start, or there is a viral and intruder attack. How do we resume our work? ([1 Samuel 22:28](#)) ? Needs to be met?  
 • The author will record the publishing and receipt.  
 • An identifier and possibly foreign key is possibly null, empty, when it is unknown, non particular, or it associates with the author.  
 • [I didn't shift, until the movement?](#) ([Acts 1:8](#)).  
 • [Did he ask you to do it?](#) ([John 8:44](#)).  
 • [By Him, about Him?](#) ([Genesis 1:1](#), [Genesis 4:26](#)).  
 • [Timone uprevent?](#) ([Matthew 26:45-46](#), [Mark 14:42](#)).  
 • [Could you need one part of Me, and not desire another?](#) Biblical Calendar. Gregorian Calendar.  
 • When can we do without AlphaSequence? A place in the Bible implies the word.  
 • No omni. Buumi, I am? No omni Buumi. Call it this. We are inside a building and we heard that food is being giving away at West. I jumped down multiple rocks. There is a team to the South East and either Beni or Buki or Baki and their friends are sitting at Center. 04:27 Dizzy sleep. 2013 Beni or Buki, I forget who? I grew up with them, but I am no longer associated with them. Nuclear or extended family?  
 • What past the time ([Isaiah 61:2](#), [Luke 4:19](#)) ?  
 • What is in use?  
 • [That chooses I](#). When I read the Bible, I adapt to the role I take.  
 • Relative to the word ([Proverbs 3:5](#)).  
 • If the two do not join? Consider separating or putting the lesser word in the commentary column.  
 • Do I determine I know?  
 • Check for grammatical correctness. As much as possible, put all the spoken word. Only adjust for spelling.  
 • If the word and scenery do not fit exactly, it may be a larger scenario.  
 • When C++ converts to an integer, it always extends down, unlike C#. There may be a day discrepancy. To dual own?  
 • What I have learnt from Bill Gates, through using the software from Microsoft.  
 • Normalize the relational database for on-line transaction processing (OLTP) specifically the Remember table should reference the HisWord table, and the Commentary column should not contain the duplicate data.  
 • The BibleHisWord table may not be necessary to relate the HisWord table to the Scripture. How much manual work does the author do, and can the author automate this work?  
 • What values can we attain in this work?

2025-11-27T16:13:00 [When did you differ?](#)

2025-11-27T16:13:00When did you defer? 2025-11-27T14:50:00 Ayesha Patel of Dulhan Grocery said her parents and her maternal grandmother traveled to India for a wedding, and either in July 2025 or August 2025 her parents had previously traveled to Africa. 2025-11-26, I saw a set of Hindi females, especially women, ordering food, and they were waiting to eat at Milk & Honey Cafe, Pegasus Center. Hsueh Amy Tm took their order, and she was the waitress.

Considering processing and storing

[How can I pass knowledge... as sharing](#) ( [Genesis 2:7](#), [2 Peter 1:21](#) )?

- Computers consist of microprocessors and memory. A memory is either:
    1. Read only memory (ROM)
    2. Random access memory (RAM)
    3. Hard disk
  - Object-orientation combines code with data.
    1. Code - method
    2. Data - field or property
  - A relational database offers the opportunity... [to reprogram and store data.](#)
  - The ID attribute in HTML files for url hashing is case-sensitive, and it serves for spot reference, and while it is a fragment address, [it is the entire unit.](#) A relational database may support the like and between keywords for the partial and range restrictions respectively. [Like as pass checking...](#) It cannot do range checking. [There are no abnormality... in certainty.](#)
- [What mentions the name?](#)
- Variable and relative? Time, number ( [Genesis 1:1](#), [Genesis 1:16](#), [Genesis 2:2-3](#), [Genesis 2:16-17](#) ).
  - Constant? Name ( [Genesis 2:19-23](#), [Exodus 3:14](#) ).

Progress

After the author conceived the notion for AlphabetSequence, he stored the word spoken into XML files, along with manually determining the relevant Bible word. This, the author did, because the author thought and felt that the readers will prefer to read the recent information, and they do not have to regurgitate the entire database. The author was living at Newark, and working from Fremont.

The author recorded, the From/Until Time Span, explicitly into the Remember's table commentary column. Now, there are three computed columns, managing this period(s); these are the days difference, the Biblical time period, and Common Era computation. The author is saving memory storage space this way. And, also offering the opportunity to other people, the possibility to calculate their preferred period.

Using the knowledge learnt from horizontal replication and partition, the audience are no longer forced to accept the author's calendar. The audience can choose their acceptable fact, and ignore nor standard derivation.

The history, this way, is to say; at the beginning, the author will record every entry after six p.m. as the next day saying, just like the Jewish day starts at 6 p.m. With the reasoning advent, the Tanakh, the New Testament, and the Koran, the truth partiality, is our governance.

The Basic of Facilitating the Truth

Most words have precedence, and do not exist in an emptiness. Words follow a trend. Are their supportive collaboration, to the utterance the author hears; these are linkable for historical evidence.

How do we give our attention? I have found written text, the easiest and most applicable way of sharing thoughts. Words spoken, when passed from generation to generation, may gain legend status, and therefore, lose appropriateness.

Examine the course of history? You will find, that most truth, are actually realizing the dream. In my case, when I try to recall, the past, I search by keywords, numbers and dates. So, entries in the word, are most to realization. The first words spoken have higher importance and closer affinity; so also, prophetic application, have standard occurrence.

Our work, so much depends on data entry. The Remember table relies on relationship, deductive reasoning.

Can we look back at history, as we precede our future

An angel said to prophet Daniel, many shall run to and fro ( [Daniel 9:20](#) )

In this phenomenal traceable, Biblically, and can we name a person that bears similar resemblance? When we study, king David, we can see that David fled from king Saul, his predecessor, and two of his biological immediate sons, who purported, to overthrow him as king. In the Book of Revelation, the only three mentions of king David, talk of movement ( [Revelation 3:7](#), [Revelation 5:8](#), [Revelation 22:16](#) ). Joseph ( [Genesis 37:2](#), [Genesis 37:9](#), [Genesis 37:19](#), [Genesis 39:12-18](#) ).

Why we Accumulate the Same ( [Matthew 26:53](#), [Revelation 9:16](#), [Revelation 7:4-8](#) )

Samuel anointed David, during king Saul's reign. The choice, one makes, ahead ( [Genesis 2:2-3](#), [2 Samuel 11:4](#), [2 Samuel 12:24](#), [Ruth 3:1](#), [Ruth 3:8](#), [Ruth 3:18](#) ). Knew versus lay.

Wanting a Member of...

In the first words, in the Bible, God referred to the beginning, of His work, giving time, an annotation, God also mentioned two places, heaven and earth, creation generally centers on the activities on the earth; and God we understand, resides in the heaven, the last point for good on earth. To seek a development, it had a beginning.

In the second sentence, second verse, God mentions, that the earth was without form and void, meaning the earth was without content. Nothing was a member of the earth. Also, God's spirit, a member of God, moved across the water.

When time is maximal used; time is ideal allowed. When our association to follow; is association to the end.

[What relates a place... as one another? Observation of a particular use?](#)

(Alison Cox).

Database Modeling

Entity-Relationship (ER) Model

Entities

A relational database identifies an entity as a table. In object-oriented programming, an entity is referred to as a class. The author's specific work is in the Ha/Word, Act/To/God, Remember, A/Pass tables. The scripture table serves as input for scripture reference, Bible word search, and gauge for AlphabetSequence.

Attributes

The Holy Spirit informed the Word.

Identifiers

Previously, the author thought of the word as unique.

Relationships

In most cases, surrogate keys such as ContactID, HisWordID are pointers to associations.

Degree-Two Relationships

Normalization results in a master Contact table with multiple details. There is a one-to-many (1:N) relationship.

Cardinality

Maximum cardinality

This is the largest number of possible occurrences on one side of a relationship. There can be only one contact for each contact detail.

Minimum cardinality

There may be no contact details for a contact.

Strength of Entity

The contact entity is strong because it can exist on its own. The weak contact details are existence-dependent on the contact entity.

ID-dependent entities

The weak contact details, primary keys include their ContactID.

(Allen G. Taylor, 2019).

Design Pattern

| Title                    | Description                                                                                                                                     | Commentary                                                                                                                                                             | Universal Resource Index (URI)             |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| Accessor Pattern         | Get and set an attribute by using a property.                                                                                                   | The boundary to a property value. Readonly is achievable by disabling the set method.                                                                                  |                                            |
| Delegation Pattern       | Composition substitutes for inheritance.                                                                                                        | The author does not inherit any class. But the author delegates by using composition to include existing services.                                                     | <a href="#">BibleBook.cs</a>               |
| Factory Pattern          | Create subclasses from one or more methods.                                                                                                     | At runtime, instantiate a variable object.                                                                                                                             | <a href="#">BallFactory.java</a>           |
| Immutable Pattern        | An immutable object is unchangeable after creation.                                                                                             | A string object is immutable. Although behind the scenes a string object is a reference type, it is treatable like a value type. A StringBuilder object is changeable. |                                            |
| Marker interface Pattern | The marker interface pattern is empty. It is metadata that refers to additional work. Examples in Java include Cloneable, Remote, Serializable. | A class may implement the cloneable interface to identify support for the clone method, which may perform shallow or deep copy.                                        | <a href="#">BibleBook.java</a>             |
| Singleton Pattern        | Only a single instance is creatable.                                                                                                            | At Daijaku Honyaku Center (DHC) there was a database table which is a reference and contains a single record.                                                          | <a href="#">SingletonPatternBible.java</a> |

Data quality management

- Data quality standards: The author is importing religious data from trusted sources. The author is following rigorous practice.
- Data quality assessment: The author is reducing human error by automating labor. Once a process is understood, the author computerizes the work.
- Data quality monitoring: The work has been on-going for at least the last 20 years; therefore, there is awareness of the expected results.
- Data quality reporting: There have been sporadic cases of data loss, referential integrity violation, corrupt databases, computer breakdown and hard disk not recoverable.
- Data quality issue management: Having data facing the Internet is a risk, so there is password protection, no web access, little metadata.
- Data quality improvement: The author educates about data safety.

Data observability

- Data pipeline tracking: Microsoft SQL Server offers overwhelming statistics. There is information on the duration of backup, restore and other tasks in its maintenance plan, profiler, query plan, logs.
- Data quality assessment: Microsoft .NET limits the timeout between request and response. Data growth is manageable by size or percentage. Schema changes are done via Transact-SQL, which propagates.

(Petr Travkin).

Unified Modeling Language (UML)

(Unified Modeling Language)

Common Structure

UML composes elements and relationships as in its predecessor Entity-Relationship (ER) diagrams.  
A model contains elements which may have descendants for specializations. A contact may have children such as addresses. When a contact is removed, this cascades to the removal of its children.  
Comments do not impact programmatically, they only serve as guides for readers.  
A directed relationship may exist between a collection of source and target.  
A namespace is a container separator.  
An import facilitates the admittance of an external namespace.  
Types and multiplicity restrict the units of information. For example, a scripture reference can only identify book titles, chapters and verses. For the King James Version of the Bible, the cardinality of the books is 66.  
A constraint represents the range of valid values that a member may have.  
A dependency replicates changes between the supplier/client.

Value

Lack of a value is null. A data type may place its own degree of significance on a value. For example integer versus (VS) decimal, date versus (VS) datetime.  
A string is a combination of alphabets, numbers and symbols. For example, as in scripture reference, when it may concatenate Bible book titles, chapters, verses, and separators.  
An integer is a whole number. For example, BibleReference which consists of Book ID, chapter and verse.  
A Boolean is either true or false and it is normally used for validation.  
A real is a number with decimal relevance, such as ratios and percentages.

Classification

This work is largely based on migrating from free-text to relational data. Classification serves well with scripture reference pre and post, and book titles, chapters and verses. The C# language class instantiations occur in [ScriptureReferenceIdbser.cs Exact.cs](#).  
The author's work has not featured inheritance. There are no generalizations, parents, nor specializations, children, classes. A substitution for this is an interface, such as, [IScriptable UtilitySQLServerManagementObjectSMO.cs](#) A child may override a parent's virtual member.

In the C# language, an abstract class is static, not instantiable. A static class may contain extension methods.  
Signals and receptions are similar to events and handlers. A page load or close is an asynchronous signal that its subscribers handle separately. A click event is triggered and resolved internally.  
Microsoft .Net supports components such as a pre-compiled dynamic link library (.dll), and compiling web forms and web services at first request. Web form matured from code-behind to code-be-side.  
For the Java language, there must be a correlation between package and directory names. Microsoft .Net does not impose such consistency. But the author abides by this rule.  
In C# version 9, a method may offer a covariant return type.

2018-07-01...2023-02-22=2428 days (6 biblical years, 8 biblical months, 28 days) (6 years, 7 months, 3 weeks, 2 days)

2025-02-24 11:07:00 With equal remembrance

- Prophecy
  1. Passover Lamb: Our LORD's Supper
  2. Beware of the Yeast of the Pharisees ( [Matthew 16:5-12](#) )
  3. Fig tree ( [Matthew 21:19-21](#) )
  4. Cock crow ( [Matthew 26:34](#), [Mark 14:72](#) )
- Fulfillment
  1. Temptation of Christ ( [Matthew 4:1-11](#), [Luke 4:1-13](#), [Deuteronomy 8:3](#), [Deuteronomy 6:13](#), [Deuteronomy 6:16](#), [Mark 1:13](#) )

70th Week of Daniel ( [Daniel 9:24-27](#) )

2025-02-24T16:25:00 Do I bring the future as one of ours, or one of people?

- Who: Seed of the woman versus seed of Satan
- Where: Revived Roman Empire
  - 1. When: Interrupted after the completion of the first 69 weeks, which commenced from the commandment to rebuild Jerusalem
  - 2. Time span: 2520 days, punctuated in the midst of the week with the Abomination of Desolation.
  - 3. Completion followed by: 1000 years.

## 2025-02-13T02:58:00 Bible meaning

1. 2025-02-13T07:05:00 God counted the days during creation... God blessed the day of rest, the 7th day

2025-01-20T02:59:00 [What is like?](#) It is late at night, and I am riding a train with a few intermittent stops. The train will make its first early morning stop at Strathfield railway station at 6AM. In the center, there were free donated rectangular paper based fruit drinks. There was also a yellow banana wrapped in a transparent container. 2025-01-20T14:39:00 [They keep on insidng... on their brand of Christianity.](#) Just before walking northward to the intersection of Paseo Padre Parkway and Blackstone Way.

1. 2025-01-20T07:37:00 12,000 virgins from the tribes of Israel, sum of 144,000 ([Revelation 14:4](#))

2025-01-15T15:22:00 [What our lesson has](#)

- 2025-01-15T15:22:00 Date: It is primarily the word of God, the WordEngineering database, His Word table, Word column. With supportive information in the other columns on the HisWord table. The information in the other tables, such as the Remember, APos, ArtOfGod tables are extractable and computable from the HisWord table.
- 2025-01-15T15:29:00 Feasible: Can a student learn to generate this data, as you have? The only pre-requisite is the Holy Spirit.
- 2025-01-15T15:42:00 Textual: The author hears the word. The author is able to transcribe the words. The accent of the author is not fluent. The author is not artistically inclined, nor trained at capturing and transmitting audio or video.
- 2025-01-15T16:02:00 Customization: How is this word supposed to be used? When the author receives the word, he makes effort to temporarily record the word on paper. At a convenient time, the author records the word on a computer electronically.
- 2025-01-15T16:03:00 How can my approach be improved? 2025-01-15T16:08:00 What is the result of this thing? 2025-01-15T16:08:00 What extent is the [fewer only](#) only? (Daniel 12:13, Daniel 11:41, Daniel 11:42, Daniel 9:27, Daniel 8:27, Daniel 6:27, Daniel 6:27, Daniel 5:31, Daniel 4:37, Daniel 2:49, Daniel 12:12)
- 2025-01-15T16:35:00 What according to the same? (Genesis 7:27) 2025-01-15T16:42:00 Your adopted father once chastised you. Why are you not like your twin sibling, asking? He said your earlier effort was not reaching. He asked, so won't I?
- Are they using your software at Digipala Haystack Center?
- 2025-01-15T19:14:00 At the intersection of 4733 Mall Common and Decoy Terrace. What do we need, each other for? As example (Daniel 4:35, Genesis 4:24-26) 2025-01-15T19:14:00 Milk & Honey Cafe, Pegagus Center, 34265 Fremont Boulevard, Fremont, California CA 94555. What is transference? What have you included?

2025-02-21T13:28:00 [When did he search... a reference as a usage?](#)

1. 70 years in Babylon ( [Daniel 9:2](#) )
2. Reverence ( [Daniel 5:17-31](#) )
3. Lot ( [Daniel 12:13](#) )

2025-02-08T20:06:20 Paseo Padre Parkway just before the overhead bridge south, between Siward Drive and Blackstone Way, walking northward [What are you working with](#)

1. 2025-02-08T22:32:00 Going along with the propoison of the LORD, I feel my best utilization of the moment is to re-crap my history. To look at how I technically made decisions, in light of the spirit. With Chuck Kissler as a mentor, he led information technology companies, and tutored Bible classes. Not to explain the Bible, but give an understanding of scripture. I found out that PowerShell that my software engineering skills were not fully developed during my Master's degree program at the University of Technology, Sydney (UTS). It may be that I did understand the paradigm shift, client-server, or specifically, Powerbuilder? Master-lacking I had no led a team software project, nor taught a non-technical female student to transition into software engineering. These opportunities and challenges to train a female prodigy include:
- The Iranian Persian female student at Central Piedmont Community College (CPCC), personal computer (PC) laboratory 3 Pascal programs.
  - Teaching Hajira Adeola a French lecturer, the wife of Fola Adeola, the co-founder of Guaranty Trust Bank (GTB), how to use a personal computer (PC).
  - Helping Jenny Stevens of PowerShell with how-to use a client/server tool as a spreadsheet.
2. At Electronic Data Systems (EDS)/Wolpote the reference table had a composite primary key that consisted of major and minor columns.
3. Daigaku Honyaku Center (DHC) the reference table I wrongly implemented as a singleton instance.
- 3.Up-to-now, what I have are raw ideas which need refence expertise. 2025-02-08T23:28:00 [You have need... how do you use?](#)

2025-02-09T20:52:00 Paseo Padre Parkway just before the overhead bridge south, between Siward Drive and Blackstone Way, walking northward. Do you have to partition?

1. Work distribution  
2. Database modeling includes normalization  
3. At Digipedia Honyaku Center (DHC) there were 2 duplicate product tables, and a plan in place to differentiate product items and prices by their colors.  
4. C#9 syntax classes are not testable, but they support extension methods which allow a static method to be called from a class name.  
2025-01-31-07:10:00 How will I assist him? (Numbers 3:45) Initially, your work was original. 2025-01-31-17:15:40 Now... your work is superseding to Holy Spirit! (1 Corinthians 2:2) 2025-01-31-17:16:00... 2025-01-31-17:16:19:00 With Richard Tembo a Zimbabwe-born Canadian student migrant, and Andrea a Greek descent female of Tembo Electronics, I did not keep track of the amount of money loaned nor repayment. With Paul Watson, a New-Zealander, and Kerry Watson, a Greek-descent nurse of New Century Software, I did not keep track of hours worked, hourly pay rate, nor the amount of money loaned nor repayment. Doctor Makana Talahyeh and I spoke about the Los Angeles (LA) fire, and doctor Makana Talahyeh said it was about 4 miles away from his home, place. Makana Talahyeh said due to global warming and wind, and may occur again in 2-3 years' time. Specify again... algorithm? Trademark... patent (1 Corinthians 3:12-14).  
2025-01-31-17:31:09:00 How About Alphabet-Sequence, you were making the bible... useful. 2025-01-31-17:31:11:00 What application... have I used? 2025-01-31-17:31:11:00 What applies... as the same? 2025-01-31-17:31:12:00 How exactly... as the author... applied? 2025-01-31-17:31:13:00 How can... the motorist... stay the same? 2025-01-31-17:31:14:00 What exactly as passed somebody? 2025-01-31-17:31:15:00 How are we getting as same? 2025-01-31-17:31:15:00 What opportunity has he given... (Hebrews 1:2)

2024-07-21T19:07:21 President Joe Biden [Where I feel... we have opportunity?](#)

• [What the society produce? What the society produce... what can happen?](#)  
Ratio percentage versus (VS) quantity? At 3 for 9? GroupPrice.com  
In the 1st scene, at Albertsons Lucky, Charter Square, in the north-west, I saw a set of transparent opened plastic containers. They were arranged in vertical rows, and horizontally placed. They contained aged, broken and cheaper cookies. They were priced at 3 for 9. In the 2nd scene, I was waiting on a public transport bus. A bus passed eastward. Other buses followed. I got on a bus, which was co-incidentally going towards my destination. When I got off the bus, inside a room, in the center, I saw uncle Jimi. It was the celebration of the birthday of aunt Taiwo. My twin sibling did not drive aunt Taiwo to the venue, since my twin sibling had other commitments. In the 3rd scene, inside a car in the south-east, a man spoke the words to me.

• Timeliness ( [Daniel 5:5](#), [Daniel 5:11](#), [Daniel 5:26](#), [Daniel 5:30-31](#), [Genesis 4:3](#), [Genesis 4:8](#), [Genesis 4:12-14](#) )

• Quantification ( [Daniel 6:5](#) )

• [Original self?](#) ( [Daniel 5:12](#) )

• [How we let Him know?](#) ( [1 Corinthians 5:7](#), [Acts 23:5](#) )?

• [I want not a...](#)

I want not a... user meaning there are...

A person wants to log in, but they do not want to replicate the security activities of having a unique login ID or user. My twin sibling said I should select their login ID and configure a database record. 20:51 headache, urine.

Word Type

• Naming ( [Genesis 2:19-20](#), [Genesis 2:23](#), [Genesis 3:20](#), [Genesis 4:1](#), [Genesis 4:25-26](#) )

• Reverence ( [Genesis 4:26](#), [Exodus 20:7](#), [Deuteronomy 5:11](#) )

• Interpret ( [Genesis 3:7-9](#), [Hebrews 11:23-28](#), [Daniel 5](#) ) to each [entirely its own](#).

2024-07-12T06:15:00 What do you do with software, once you produce? It specifies a beginning, and it specifies a period.

1. 2024-07-12T06:25:00 [How much period... we have the same?](#)

• Telex integrates programmable script and audio recording. MP3 is an industry standard.

• The author made a transition from one-time manufactured hardware to maintainable software.

[What if we could give description?](#)

• An instruction including a keyword and object(s): Let there be... An instruction accompanied by action(s) per day

• Observation of result: Good

• Identity: Day of the week, etnologically, naming

• Commentary with reference to living entities

International Business Machines (IBM):

• [An association of being alike... is the assurance of the same.](#)

• [The continuation of myself... is all I am allowed.](#)

• [One aside... the decision.](#)

1. IBM PC compatible:

At Central Piedmont Community College (CPEC), Charlotte, North Carolina (NC). The author tutored in the personal computer (PC) laboratory.

• The computers were IBM, Apple, Radio Shack

• The programming languages were Microsoft's Basic and Borland's Turbo Pascal

• The applications were WordStar wordprocessor, Lotus 1-2-3 spreadsheet, dBASE

2. IBM employee:

• In Ibejuja, Lagos State, Nigeria, while the author was walking on the street, away from the premises of a client, Simeon Onasanya, an employee of IBM and the older brother of Tunde Onasanya, called him

• In Sydney, Australia, Alex Koutsombos, an IBM employee, sent periodic Java programming language e-mails

3. IBM event:

• In Sydney, Australia, the author received an end-of-year gift of wine from IBM

• In Sydney, Australia, the author interviewed for a Microsoft SQL Server database administrator (DBA) role with IBM for the Sydney 2000 Olympics

• In San Francisco, California, the author attended an evening after-work party that was organized by IBM

• In San Jose, California, the author attended a conference that was hosted by IBM. Among the invitees were an African American mother and daughter

(Tiffany McDowell, 2024-07-04).

How-to verify the work of the spirit?

• Is it compatible with the Bible? ( [John 10:20](#), [John 17:22](#), [1 John 5:8](#) )?

• [Is this a link?](#) ( [Genesis 41:32](#), [1 Corinthians 15:45](#), [Acts 9:3](#), [Genesis 5:3](#) )?

Data Storage

Data Storage Westpac

[Where we reside... is where we realize our vision.](#)

During my 2nd contract with Westpac, I calculated financial information. I did not know how this data got into the database, nor was I aware of future data update. I am now writing historical experience. I am not writing technical understanding.

Data Storage - DataEntry table

[What creates the desire... to be something?](#)

The balance tradeoff... between a persistent table or a computed period? This table was explicitly created on 2024-06-10T03:13:00.

[How as a result of what?](#) Take a word? Store as a record versus (VS) store as HTML file?

• Domain knowledge and expertise? Personal testimony

• Technical requirement? Data entry versus (VS) HTML performance penalty

[What exactly can we expect...out of the Bible?](#) ( [Daniel 5:31](#) )?

1. When is the Bible specific about time? ( [Genesis 41:32](#), [Genesis 41:1](#), [Genesis 41:5](#), [Genesis 41:9](#), [Genesis 41:11](#), [Genesis 41:26-32](#), [Genesis 41:34-36](#), [Genesis 41:43](#), [Genesis 41:46-48](#), [Genesis 41:50-54](#) )?

[How admissible is the word?](#) ( [Genesis 41](#), [Daniel 2](#) )?

[GetAPage.html](#) depends on the word.

[What did I fit into a place?](#)

1. Ark of the Covenant

2. Temple

3. Jerusalem

4. Judah

5. Israel

What did He see Himself as?

1. Joseph ( [Genesis 37:9](#) )

2. Moses ( [Acts 7:25](#) )

| Word                                        | Scripture Reference              |
|---------------------------------------------|----------------------------------|
| Divided according to the children of Israel | <a href="#">Deuteronomy 32:8</a> |

[What I use people for \( Job 35:6-8 \)?](#)

- Sin against people.
- Sin against God.

[How are people as a result of Me?](#)

**A programmable approach**

[This I have devoted to...that you may find me useful \( Revelation 2:7, Revelation 22:2, Revelation 22:14, Revelation 21:23, Revelation 21:27, Revelation 3:12, Revelation 21:2 \).](#)

1. The SQL is being built dynamically with the Bible version and the query condition clause customizable.

2. The output is in the JSON and HTML format with support for export into the CSV, JSON, XML.

God said, What are the other activities of God? The spirit of God moved, He saw it was good ( [Genesis 1](#) ). [When one finds good? That is the meaning \( Genesis 1:16, Genesis 2:19-20, Genesis 4:1-2, Genesis 4:26 \).](#) We demonstrate...how we are. It is not misleading...That is the deception ( [Revelation 12:10](#) ). [Appreciate as \( Matthew 16:18 \)?](#)

**What is the supplement?**

| Word                 | Commentary                                            | Scripture Reference                                                |
|----------------------|-------------------------------------------------------|--------------------------------------------------------------------|
| Greatest Commandment | Love the LORD thy God. Love thy neighbor as thy self. | <a href="#">Matthew 22:36-40, Deuteronomy 6:4-9, Mark 12:28-31</a> |
| Forerunner           | The law and the prophets were until John              | <a href="#">Luke 16:16</a>                                         |

**Is this generation the same?**

| Word     | Scripture Reference                        |
|----------|--------------------------------------------|
| Seed     | <a href="#">Isaiah 53:11, Genesis 3:14</a> |
| Lead     | <a href="#">Matthew 23:9, John 15:15</a>   |
| Interval | <a href="#">Hebrews 11:39-40</a>           |

**The phases are optional of the progress**

- The distribution of allocation? Time, place...
- [What exists as the present \( Deuteronomy 32:8 \)?](#)
- It is one man doing...it is many doing.

**2026-02-09T21:51:00 What did He pair? To be essentially the way. ( Genesis 1:26 ).**

- Father, Son, Holy Ghost: Creator
- Great lights: Signs
- Angels and man

**To seek someone else as I**

| Actor  | Commentary        | Scripture Reference             |
|--------|-------------------|---------------------------------|
| God    | Man               | <a href="#">Genesis 1:26-27</a> |
| Adam   | Helper            | <a href="#">Genesis 2:18-25</a> |
| Eve    | Seed of the woman | <a href="#">Genesis 3:15</a>    |
| Leader | Successor         | <a href="#">Acts 26:29</a>      |

**What is according to time?**

**Intellectual presuppositions to enable the rise of science**

1. Intelligibility of nature: Words were part of his life.
2. Order in nature: To digest what has been and reckon what will be.
3. Contingency of nature: To take one's own as one's possibility.

**Understanding is achievable**

1. Observe: Read the Bible and record words spoken.
2. Test: Compare the words in the Bible with the words heard.
3. Measure: Apply metrics to gain closeness.

(Stephen C. Meyer).

What is the aptitude of this work?

- AlphabetSequence spreads out.
- Dates are lined up.

Words out of numbers.

[Where is the knowledge added?](#) The word column is how the author is up-to-date? The others are man's work.

[Telling intelligence?](#) What did Hagar say? Her only speaking was with the one that sees?

**What specially like Him?**

[What specially like Him? \( 1 Corinthians 15 \) I speak to task.](#)

**2022-08-08T19:00:00 Country**

2025-04-17T04:38:00 We have considered place grouping, as in countries. Should we also consider 2025-04-1705:22:00 man grouping?

2025-04-1700:00:00 Epoch timestamp: 1744848000

2025-04-1705:22:00 [Place grouping... man grouping](#), 2025-04-1804:06:00 ( [Genesis 48:4](#) )?

2025-04-17T06:16:00 [Do we choose... a realization of Him?](#)

- 2024-07-09T18:30:00 He has always put it in... context of time.
- 2024-09-15T13:39:00 How our part... is never... design as lasting?

- 2022-08-08T19:00:00 [Dispossess the Devil?](#)
- 2024-07-23T09:22:00 To be an African's... Native.

- 2024-09-24T11:01:00 I have brought shame to my people. The word came just before I got to the south of the Paseo Padre Parkway Highway 880 overhead bridge, but I was asked to delay, suspend, interrupt writing the word, until I got to the north of the bridge. I

- saw a husband wearing a purple shirt, and a wife wearing a green shirt.

- 2022-10-08T11:08:00 [To work as a part of Me?](#)

- 2023-06-07T19:31:00 [Do we accommodate the usual? Country of privilege?](#) I saw Barney John and his wife, Bernadette John, of 4770 Canvasback Common. Country citizenship for Jews and Palestinians?

**Associated culture**

1. Associated culture ( [Acts 7:22, Matthew 15:2, Mark 7:3, Mark 7:5, Daniel 1:3-5](#) )

[What I am rendering? To what particular use...is me \( Matthew 16:18 \)?](#)

**What do I form out of this?**

How do I expand on the word? Scripture reference or personal testimony ( [Genesis 2:18-25, Genesis 3:15, Genesis 41:45, Daniel 2:45](#) )?

**What is the reward of the past?**

From that day ( [1 Samuel 16:13, 1 Samuel 18:9, 1 Samuel 30:25, Ezekiel 39:22, Ezekiel 48:35, Matthew 22:46, John 11:53](#) ).

1. Salvation ( [Isaiah 44:31](#) ).
2. Commit ( [Luke 23:46, Psalms 31:5](#) ).

What personifies the time?

- 1. First and Last Adam ( [1 Corinthians 15:45](#) ).

- 2. Firstborn ( [Romans 8:29, Colossians 1:15, Colossians 1:18, Hebrews 12:23](#) ).

What does authoring the word do? To shed as much light as our opening ( [Genesis 1:1-1:5, Luke 4:16-4:32, John 2:1-2:11](#) ).

[Why, comment cannot be our part?](#) AlphabetSequence is like a calculator. The logic is straight forward and it is not varying in part.

**Spirit of the Antichrist**

- Human sacrifice.
- Including love babe i won, Including love their own father.
- [What I do was able to learn the importance of the disease.](#) I am in a bus and I flirted with some females. I got off and I made my way home, westward. Again, I got off and I entered an office. Workers are giving away vouchers. I got some vouchers too even though I may not eligible. I entered a taxi. The driver accused me of being fraudulent. After some thought, I ran westward towards divided streets which may prevent me from being getting caught.
- [According to wordfulness \( 1 Timothy 6:17 \).](#)

How do you reference the Bible?

| Word | Scripture Reference | Commentary |
|------|---------------------|------------|
|------|---------------------|------------|

- [What does he want as a self?](#) O pe. In Yoruba?
  - Complete
  - Late
  - Call
- Thanksgiving
- Where am I, as a human being?
- [The life of appointing someone as myself](#)

Word Inference

- A lot of Yoruba language words may mean ethnic conflict.
- The Bible is specific in relation to the Jews. The word, about, generally refers to the surroundings and the time of an event.

Precminence of Data?

How suitable is the data for general use?

Coming from an Information Background

- [There is more to you, than you are](#) ( [1 Peter 3:18](#) ).
- We want personal data, when is public data sufficient?
- From... Until AlphabetSequence
- God expressed His wish for me
  - God spoke intermittently
  - God explicitly mentioned about some of the specific people that were in my life
  - To acknowledge, where I am present, I had left Wikipedia, I was at DTEC. God asked me to leave my friends at Campsie and relate with Lakemba.
  - God did not initially identify Himself, with a particular name

The author will not break each experience into sequences. At this late stage of the research, the author is content, with his original table design, and will elaborate, when it is appropriate, to newer suggestions.

(John Whalen).

How amenable am I the same?

Quality Assurance

- [Quality Assurance](#)
- To achieve performance beneficiary, the author uses AJAX, a single Javascript and CSS file, and minute images.
- The author's work is largely based on the SQL's SELECT statement, a matured declarative language, which the author uses to query God's word.
- The author relies on the Bible database, a recognized source of information, which has stood the standard of time.
- The reason for AlphabetSequence is because the author lacks Biblical knowledge. The author sought for a way to reconcile what he is hearing with the established word.
- The SQL COUNT(), AVG() and SUM() Functions are row-based.
- Code Analysis: [JSHint](#), [ESLint](#)
- Questionnaire: [RatingsRank](#), [Indexing](#)

Prepared for Time

On 2019-04-04T09:00:00 [andre.nguyen@gmail.com](#) will telephone me about the role with Google's co-founder Larry Page [jobs.levy@kirkchuck.com/701c6d9a-348a-4727-a345-d493d6cc722a?agencyId=388c6b44-7127-4709-a021-6c68ca5f7401](#) Andre Nguyen asked how I spend my day? 2026-01-19T11:32:00 [You have tried to supplement... what God has given you.](#)

2026-03-03T11:24:00 [He compliments... our way](#), I was reading the Bible... He was giving me a word.

When I started AlphabetSequence, I ate my only daily meal at 6PM, read the Bible and went to bed. I could break my day into punctual scheduled activities, such-as:

- Wake-up
- Brush my teeth and shower
- Breakfast
- Work
- Lunch
- Dinner
- Bedtime

This is how most people, live their lives; this is what I have accepted as mine. When I receive a word, I make it my work, to record the word and personalize my entries. I try to match this new story segment, with the preceding and forthcoming event threads.

When the author observes explicit experiences, he may record this additional data, in the HisWord's table ContactID, ScriptureReference, Location and Scene columns. [How relevant is Your word to our opinion?](#) This projection may result in entries of new records in the Remember and APass tables. [Where are people... his relation?](#)

[However, he is present, that is how I live.](#)

- If I have a paper and pencil available, I write down the word, and I calculate the AlphabetSequenceIndex.
- When I have access to the database, I enter and store the record electronically.
- Computer access means the resultset is retrievable via GetAPage.html.
- Text editor is useful for writing SQL.

2024-07-01T18:27:00 34524 Siward Drive, Fremont, California (CA) 94555

[How do we develop... our past time](#) ( [Genesis 37:19-20, Daniel 6:5](#) )?

God's Word; Human Interpretation

The author separates the word of God from the supporting information:

- Cast which fits into the Contact ID column
- Scripture reference is the Biblical theme
- Scenery which is the dream setting
- Location which is an awake surrounding
- Language translation

Specificity guides our entries into the HisWord table; for example if the information is not explicit, do not record it. This means that the nullable columns may be left empty. When there are more than one possible entries, choose the most rare.

[What we do minimally, is how we do enormously.](#)

God may put a thought or question in my mind, rather than sharing a word? To know the need of revealing one another?

How do you, reference the Bible?

- Search Engine? Requires Internet access.
- [ScriptureReference.html](#) Requires Bible knowledge and place in the Bible.
- [BibleWord.html](#) Requires word knowledge

What is the certainty of the word:

- When the author hears a word and there is a reference to a place in the Bible, this affirms the word's relevance to the Scripture.
- Grammatically correctness is also vital.
- If a word correlates with a historical event, then it is credible.
- When the Spirit leads and guides towards an utterance ( [Matthew 10:19-20](#) ).
- Where am I, remembrance of how I am made ( [1 Corinthians 14](#) )?

What does He choose as example?

- God rested on the Sabbath day ( [Luke 23:56](#) )
- Jesus Christ ( [Daniel 9:24-27, 1 Corinthians 15:45, 1 Corinthians 15:47](#) )
- Man such as King David ( [2 Kings 14:3, 2 Kings 16:2, 2 Chronicles 28:1, Amos 6:5](#) )
- Place such as Sodom ( [Matthew 10:15, Matthew 11:23-24, Mark 6:11, Luke 10:12, Luke 17:29, Romans 9:29, 2 Peter 2:6, Jude 1:7, Revelation 11:8](#) )
- Other living things ( [Numbers 22:21-33](#) )

To whose advantage am I?

In every scenario, we participate in, our last outcome should be holy ( [2 Samuel 12:14](#) ). Future study, may consider the actors in the Bible, and award their holiness in each scenario.

Centeredness

This is our attempt to find follow-up, continuity in the Bible. A brief repetition of our activities, subsequently: Firmer consequence ( [Isaiah 23:15, Isaiah 23:17, Jeremiah 25:11, Jeremiah 25:12, Jeremiah 29:10, Daniel 9:2, Zechariah 7:5](#) ). Listed below are some of the repeated reinforcements.

## Autobiography

2024-12-25T19:12:00 Bimpe Bakarat Lawal returned my telephone call. Bimpe Bakarat Lawal said both uncle Demola and uncle Jimi had invited her to a party at the house of uncle Jimi.

- At Central Piedmont Community College (CPCC), the major course, students and colleagues include:
  1. An African American female senior, Gayle,
  2. An African American male classmate, Virgil Hawthorne. Who waited for the completion of an higher than college degree, prior to attending the graduation ceremony
  3. Michael Pope, a Caucasian student colleague who wanted to come to the house to study together. He is mechanically inclined.
  - My twin sibling and I listened to America Top 40 with Casey Kasem, every Saturday morning 2024-12-25T22:00:00 [What entrances, of the people?](#)
  - I planned to build a traffic light for my project.
  - In one of the church where I was part of the congregation, Bernie Alsopman mentioned. Perry drove me to church. I went to altar calls for masturbation prayers.
- 1. 2024-12-25T19:12:00 [When I had the option... I have acclimated.](#)
- 2. 2024-12-25T19:12:00 [Australia had brought me in... to fit into the crowd.](#)

2024-09-29T01:41:00 Adeyemo Adewuyi Adeniji

**What role he played in your life?**

They had varying mother... but one father ( [Genesis 32:28](#) )

2024-12-31T16:48:00 M Hair: Located in: Paseo Padre Shopping Center. Address: 34380 Fremont Boulevard, Fremont, California (CA) 94555. At the intersection of Fremont Boulevard and Paseo Padre Parkway, 3 motorcyclists rode northward

2024-12-31T19:55:00 A male-dominated family. [What adjustment did you need to make to your life? How your lives resemble who?](#)

1. Post 9-year-old relocation from He to Lagos

1. Patriarch, brother Yemo

- 2. Captain of the Nigerian national hockey team
  - 3. Teacher for the 1st year of the Baptist Academy secondary school, evening schedule
  - 4. The managing director of Gistelo provided lunch money to eat at the Baptist Academy secondary school during form 2..5
2. Post-1988 deportation: You called him Daddy, that is what everybody else called him
- [Where did he serve... a people?](#)
  - [Where did I... remove myself from the past \( Genesis 31:41 \)?](#)
  - [What apart... are new?](#)
  - [Spendine time... to reality?](#)

Faith An Yao

Age difference

1. Almost a Biblical generation, 40 years, separates Faith An Yao and the author.
2. 2023-08-31T08:57:00
  - 1. In the year 2024, the author will turn 57 years old.
  - 2. In the year 2024, Faith An Yao will turn 18 years old.
  - 3. In the year 2024, the combined years of Faith An Yao and the author will be 75 years.

Diaspora

1. The author's 1st workplace in Nigeria and Australia was with Ibos and Jews respectively. Chyke Onyekowere like the author, studied in America. Ralph Silverman was a South African Jew. The author lived and worked in Lagos and Sydney, the commercial centers of both countries. Our experience and education must align with the migrants. As in Daigaku Honyaku Center (DHC). Reminded of success? Kowe? Yoruba speaking. Mufoz? Oral communication and speech. [Where will I find the same... as me? I was getting trauma on how-to...place my work in life? Looking at me as a reflection of you.](#)

Education in Charlotte, North Carolina (NC)

In spite of racism...we can observe.

1. Between 1994-1996, I completed 2 years of education at Central Piedmont Community College (CPCC), Charlotte, North Carolina (NC)
2. I graduated with 3 Associate degrees in Electronics, Computers, and Electrical Engineering Technology from CPCC
3. During the Summer of 1995, after completing the 1st Associate degree my twin sibling and I re-located to Atlanta, Georgia to live with my paternal uncle Niyi. Although I gained work employment at a fast food restaurant, I chose to return to CPCC to complete all 3 Associate degrees
4. Between 1996-1998, I attended the University of North Carolina, Charlotte (UNCC) and graduated with a degree in Electrical Engineering Technology - Computer Emphasis. I do not learn...out of others. My twin sibling and contemporaries are educational and career influences. I am a better tutor than a learner
  - I contracted at Sunhealth Corporation. I added report columns. Legal (8.5 × 14 inches)
  - I was hired at McKey Real Estate to develop a relational database application using R-Base 5000. My stumbling block was either to use the integrated development environment (IDE) wizard or learn from the manual
  - In Charlotte, an African American male prospective employer asked me to learn the C programming language. At Central Corporation, I looked up to an African American male software engineer that came among others to install software. At Central Corporation, I also upgraded software developed using the C programming language by increasing the number of labels it prints for tape reels. [What do I need of a capable human being? What resemblance has He made \( Genesis 22:28, Genesis 5:3, Genesis 4:17 \)? What word reminds \( Mark 11:21 \)?](#)
- 5.

Style of Writing

What has prompted your interest in the topic?

The driving forces of arriving at the author's work are:

- During his education in Australia, the author was exposed to Case-Based Reasoning and Unified Modeling Language. Both themes will suggest the future is made of the possibility. We do not arrive at the future, at once, we gradually move into it.
  - The author was receptive and felt most at home during worship.
- (Dennis Tenen)

What kinds of questions will you be asking?

How can no word be lost? How does the author preserve the word of God, audience, scenario, timing, reference? What retention has He made of His past?

How do your questions fit into the broader intellectual tradition?

The book, The Bible Code by Michael Drosnin, is the sole source for this religious work.

How will you answer your questions?

[If love is not sweet, where is it needs?](#)
